Quantity 1

Detailed Description

Bravo fence was specifically designed to meet a Swimming Pool Enclosure Code developed by the U.S. Consumer Product Safety Commission (CPSC). This fence has nearly four feet of space between its two horizontal rails. This virtually eliminates the possibility of a small child climbing over this fence. Also, a child-resistant magnetic gate latch is standard on all Bravo gates. This magnetic latch keeps the release mechanism out of a child's reach and has a built-in keylock for added security.

Design 2-7/16" x 5-3/16" mesh, 1" x 1/8" main bar and 3/16" round cross bar

Metro Design steel security grille with 2-7/16" x 5-3/16" mesh, 1" x 1/8" main bar and 3/16" round cross bar is the most popular of **Ametco's** steel security fencing line. The simple, clean lines of this type of fencing means that it can be used for a vast range of applications. It is particularly suitable for both prestige and high security applications including schools, medical, sports, leisure, industrial and military. **Metro Design** is fabricated to your requirements than hot dip galvanized and powder coated to provide an extremely effective coating system. The Ametco coating system gives the **Metro Design** maintenance free protection and the beauty of color.

These steel security grille systems are manufactured using an exclusive electro-forged welding process, giving complete penetration of the cross member. This alternative approach is both functional and decorative making them ideally suited to harmonize with any environment. Through these advanced techniques, Ametco Manufacturing has changed the image of fencing and extended the range of applications throughout the private and industrial building industries.

LASTING COLORS ...with the best corrosion protection in the industry!

All steel security grille products have a hot-dip galvanized finish with a polyester powder coating giving them the best corrosion protection in the industry. Ametco's fence coatings:

- ensure protection from the elements
- improve rigidity
- eliminate maintenance
- endure exposure without crazing or fading
- come in 15 color choices

The hot dip galvanizing may leave rough areas on the treated surface, although it does not impair the coating's corrosion resistance. The galvanized fence is then powder coated with one of 15 different colors for an "extra" touch of appeal and harmonizing with its surroundings.

For jobs where a smooth surface is required, see Ametco's fixed louver aluminum or stainless steel products.
