Explanation of Building Plan:

We want to replace a set of stairs at our driveway door with a pressure treated deck and stairs that would "wrap around" the back corner of our house and connect with our existing deck.

The proposed deck would be approximately 6' x 30', with a set of stairs (2 or 3 steps) leading onto the driveway facing Murray St. It would stand about 2 ft high off the surface of our driveway and would have a safe railing on both the steps and the driveway edge of the deck. The deck would be entirely made of pressure treated wood to match the rear deck and would be stained to match.

We believe the addition of this deck will enhance our enjoyment of our home, enhance the appearance of our home, and add to the beauty of our neighborhood.

Thank you. Cathy + John McKenney
