Hi Chris – Here is a plot plan sketch from the City's gis mapping tool showing where the edge of the building is and the edge of the existing fire escape.

The existing fire escape is approximately 2.2 feet inside the edge of the building. FYI – I'm relying on the 2.2 feet from the measurement in City maps – if need be I'll go out and measure the precise distance.

I've also attached photos of the side of the building and edge of fire escape as well as a measurement showing the existing fire escape columns are 18' 7", which is the same from our engineering plans.

To confirm, our intention is not to expand the footprint of the existing fire escape but rather replace it within the existing footprint.

Please let me know if you need any other information.

Thank you!

Mac
