Hi Christina -

The landscape planting proposed will shift slightly to recover the pond access road. The five new trees shown will fill the gap, overall the plant numbers proposed should adequately meet standards. The Willow trees that are defective, will be replaced with Tupelo trees, we have discussed with landowner who agrees with the native tree plant type.

As with these types of projects, we retain ability at the completion of the project to 'adjust' landscape / tree planting including additions as part of contingency provisions. I feel comfortable with the plan as shown. It would be good if we can visit the site as the project evolves.

Thanks

Jeff

Hi Jeff,

Thank you. Had you intended to send a plan too? It wasn't attached to your e-mail.

Chris

Hi Christina -

In review of the current plan, this should be adequate, it shows shading where the plants are going vs exact spaces and the five trees able to close the space.

We would make sure that the gap is filled. There is a lot of plant material assigned to the project and I will be part of the plant staking / layout prior to planting. Including a note on the permit that the pond access should be adequately planted should suffice. I'm comfortable with this approach knowing it is a park and that we are part of the project team.

Thanks,

Jeff
