Mr. Cuyler Feagles, AIA
Assistant Facilities Manager
Portland International Jetport
Portland, Maine

**RE: Project Closeout Document– Parking Operations Building Extension
Portland International Jetport**

Mr. Feagles,

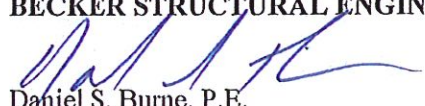

Per your request, this letter is in efforts to document our on-site observations and review of materials testing performed during the construction of the Parking Operations Building Extension at the Portland International Jetport.

Our office visited the site periodically to observe the construction progress and to review for general conformance with the Construction Documents and design intent. At each visit, we found the construction to be in general conformance with the documents. Any items not in conformance were discussed and resolved, and we are not aware of any outstanding structural issues. In addition, we reviewed material test results that were supplied to us and also found materials to be in conformance with the documents.

Based on our observations and review, we take no exception to the structural work completed for this project.

Sincerely,

BECKER STRUCTURAL ENGINEERS, Inc.

Daniel S. Burne, P.E.
