Brian,

The team at the airport and we have worked out the following proposed solution:

1. We will provide an exit through the construction zone that includes a door with the appropriate swing and hardware, tape marking on the floor for the contractor to know what to keep clear, and appropriate signage.
2. We already have it planned that significant deliveries at the curb will be after hours, and so any time when the exit will not be available will be after hours (after 2AM).
3. We will be issuing an addendum during bidding, and will include these requirements to the bidders within that.

Sound OK?
