The conceptual drawing represents the basic layout to replace, with granite steps and retaining walls, the crumbling timbers and brick walkways that exists. This plan is being developed to stabilize the slope and allow functional access to the yard.

The walkway from drive to house will not change in size or shape, but be rebuilt out of granite due to the fact that the existing timber and brick walkway have become unstable and unsafe.

All disturbed areas will be planted with plant material including ground covers to minimize turf and stabilize soil. Native and site specific plant material will be recommended.
