CITY OF PORTLAND

SHORELAND ZONING REQUIREMENTS

Shoreland zoning requirements apply to all designated shoreland zoning areas shown on the Official City of Portland Zoning Maps. Generally speaking it is an area enclosed within 250 feet of the High Water Mark.

WITHIN 75 FEET OF NORMAL HIGH WATER LINE:

- No new building construction allowed.
- There shall be no newly cleared openings.
- A well-distributed stand of trees and other vegetation, including existing ground cover, shall be maintained.
- Clearing of vegetation for development is NOT allowed, except to remove safety hazards.
- No newly cleared opening greater than 250 sq. ft. in the forest canopy as measured from the outer limits of the tree crown is allowable. However a footpath not to exceed 10 feet in width as measured between tree trunks is permitted provided that a clear line of sight to the water through the buffer strip is NOT created (to be "meandering" in nature).
- There shall be no accessory structures constructed, such as piers, docks, wharves, bridges, stairways, parking areas, and retaining walls without permits, review, and approvals.

BEYOND THE 75 FOOT SETBACK STILL WITHIN SHORELAND ZONE:

- There shall be permitted on any lot in any 10 year period, selective cutting of not more than 40% of the volume of trees 4" or more in diameter, measured 4.5 feet above ground level. Tree removal in conjunction with the development of permitted uses shall be included in the 40% calculations. Pruning of tree branches on the bottom 1/3 of the tree is permitted.
- In no event shall cleared openings for development, including but not limited to, principal and accessory structures, driveways, and sewage disposal areas, exceed in the aggregate, 25% of the lot area or 10,000 sq. ft. which ever is greater.

RE: TIMBER HARVESTING:

- There can be no single clear cut openings greater than 10,000 sq. ft. in the forest canopy (measured from the edge of the crown of trees).
- Clear cut openings greater than 5,000 sq. feet must be 100 feet apart.
- Clear cut openings must be included in the calculations of total volume removal.
