24"

Unfinished eave

36"

3" Selkirk pellet stove pipe connects to a Selkirk 3" to 6" pipe adapter. The adapter connects to a Selkirk double-wall thimble designed to pass through a combustible wall. This thimble connects to the insulated 2-ply stainless steel liner running up the chimney flue. It's overspec'd, I know, but very safe.

All pipes and thimbles are Selkirk brand and will be installed according to manufacturer's requirements. All Selkirk pellet pipes are rated to 1" clearance to combustibles.

3" Selkirk pellet stove pipe will pass through a Selkirk pellet stove thimble and continue into the unfinished eave

Pellet Stove

The Castle Serenity stove is rated for a 5" clearance in the back and 7" clearance on the sides. Installation will certainly abide by these clearances.
