This is a description of the installation of two 100-gallon L/P tanks and running gas lines to your new generator. We will set the two tanks on the front left of the house. We will run a 2PSI gas line into the basement, along the ceiling, then back outside of the house into a trench to the second stage regulator mounted to the post beside the generator. We will use 3/4 PVC to back vent the regulator 5 ft from the generator. The price below includes the setting the 100-gallon tanks, Rego second stage regulator, regulator backing plate, 1/2 inch copper gas line in plastic conduit, brass and black iron fittings, gas shut off valve, back vent material for second stage regulator, Filling of the L/P tank will be billed separately. We install a Tank Utility Monitor on the L/P tanks that Frederick Brothers can monitor the level of L/P. This will allow us to know if the generator has been used and deliveries are needed sooner than the normal scheduled delivery of once per year. There will also be an annual lease fee of \$200.00 per year.
