

Sign installation details

Sign to be manufactured out of aluminum framing, steel support pole and lexan faces.

- (1) 6" x 6" steel pole will attach through the center of the sign. It will keep the sign 3' from grade, this section of the pole will be hidden with an aluminum shroud.
- (2) The pole will then extend into the ground a Minimum of 4' to get below the frost line. It will be set in a hole that will then be filled with concrete.
