To Whom It May Concern,

Core Installations, the storage rack installation contractor subcontracted by Consigli Construction for 102 Hutchins Dr, has 10 years of experience installing similar storage racking assemblies. This project included the dismantling and reinstallation of an existing racking system that is to be utilized by MMC upon completion of the building. Upon dismantling, members were contained in covered, weatherproof storage containers rented and managed by Consigli Construction while awaiting reinstallation. Core Installations provided new hardware, 5/8" lag bolts with 3-1/2" embedment. This racking was installed per industry standards and will be sufficient for this application if users adhere to load ratings as marked on load bearing members, and perform annual inspections for any damage repairs or maintenance needed.

Thank you,

Jaime Rowland
Director of Operations
Core Installations
