Stephanie,

The sign company responded below to how the sign will be fastened. I'm not sure if you need more information this sign is already in place with existing hardware and fasteners on it. they will be taking apart the sign framing placing H brackets and sliding my panels into the brackets to hold my sign and then refastening the framing.

Thanks
Anthony

Good afternoon Anthony,

The modified addition to the pylon will have H dividers with grooves so that the new panels will simply slide in through the side and be held by the frame. I hope this helps – let me know if you need more detailed information.

I'll let you know when we have received your check and signed proposal at which point we will get your panels into production.

Thank you,
Sarah

Subject: Re: Sign Proposal

Good morning Sarah,

I submitted a sign permit to the city earlier this week and the only other information they are asking for and I need to complete the permit is how you would be fastening the signs to the monument. Can you please provide me with this information. I'll be sending a check in the mail shortly and the signed sales agreement.

Thank you for your help,
