

To supplement the response to your first comment in the original email – please find attached the photos of a recently built self-storage facility with ADA signs and pull-up straps. Our client intends on using this method for the 18 ADA accessible containers if this is acceptable to your Department. The ramp shown in the pictures will not be used. Instead, we'll build the gradual slope and landings with pavement as outlined in the ADA exhibit.

Please let me know if you have any questions.

Thanks,

Sam
