## EXECUTIVE SUMMARY

(Note: Crosby Maintenance Complex was tested in June of 2000 and a separate report of ESHA findings was issued at that time).

*Intent - Asbestos Survey*

The intent of the asbestos determination survey was to identify, sample, and quantify accessible suspect building materials that may contain asbestos and could be impacted by renovations or maintenance activities. The site evaluation was performed initially by conducting a walk through of the areas to be impacted, developing a list of accessible suspect building materials, followed by physical sampling and analysis.

The asbestos survey report is a defined overview of the majority of the asbestos materials identified in each area. The Maine Turnpike Authority can anticipate that the building materials sampled and found to contain asbestos have been identified as indicated in this report. Due to the nature of renovations and construction dates of each site one should anticipate some hidden asbestos materials behind walls, ceiling, and underground systems.

If major modifications, renovations or demolition are to be conducted ESH recommends that a competent person as required and defined by the USEPA National Emission Standards for Hazardous Air Pollutants (NESHAP's) be present on-site during renovations or demolition. Due to the limited nature of any asbestos survey NESHAP's requires that a person trained to identify asbestos building materials be available during such activities.

*General Materials Evaluated and/or Tested*

During the inspection several types of building materials that may or may not contain asbestos were tested for asbestos. The general list of tested materials is as follows:

*Roofs*

- \* Perimeter Flashing
- \* Chimney Flashing
- \* Roof Surface
- \* Roof Underlayment
- \* Roof Substrate

*Mechanical*

- \* Pipe Insulation
- \* Tank Insulation
- \* Boiler Insulation
- \* Boiler Liners

- Fire Protection (spray-on insulation)
- Fire Stops
- Chimney Liners
- Ducts

#### *Buildings*

- Floor Tile
- Tile Adhesive
- Floor Systems Paper
- Plaster Systems
- Gypsum Systems
- Wall Insulation
- Interior and Exterior Wall Coverings
- Countertop Laminates and Adhesives

#### *General Findings*

##### *Asbestos Building Materials*

Asbestos building material investigations and bulk sampling was conducted within the boundaries of each building at each site. ESHA collected approximately 1,200 bulk building material samples to include plaster wall / ceiling systems, pipe cover / mudded fittings, vinyl floor tiles, adhesives, linoleum, and other suspect materials. The analysis indicates that the majority of the building materials within the boundaries of the facilities are not asbestos-containing (see bulk sampling summaries).

The majority of the asbestos materials found at the facilities are located on the exterior roof systems or in the flooring systems. Some thermal system insulation in the form of asbestos mudded fittings were found at the Mile 24 North and Mile 24 South Food Service Facilities.

##### *Recommendations - Asbestos Materials*

The majority of the accessible asbestos materials are in good condition and the recommended response action is maintenance in-place under an Operations and Maintenance (O&M) program. ESHA recommends the development and implementation of asbestos removal plans and specifications for any other material(s) to be impacted by renovations or demolition.

### *In-place Management*

During the site evaluations and asbestos determinations, any material identified as asbestos was evaluated for condition. If any materials were found in a condition that warranted an immediate response a design plan as developed and a response action was completed. The remaining asbestos building materials were in good at the completion of this study.

In-place Management of asbestos containing building materials is an acceptable and cost effective level of response. As with any type of asbestos building materia they can be subject to wear, damage or failure due to age, and inadvertent damage by maintenance staff and outside contractors. Several asbestos material management protocols should be implemented and may include periodic surveillance, asbestos awareness information distributed to outside vendors and contractors, and labeling.

### *Cost Estimates*

Cost estimates for removal and disposal of the asbestos building materials identified in this report have been provided based on several factors, existing site conditions, current regulations, disposal fees, labor rates, and anticipated phasing of a removal sequence. The cost estimates include removal, disposal, and permits only. No fees have been included for replacement of removed products or air monitoring if required.
