

Description of project:

Partition a small section (10X10) of our reception area to make an office with an interior door. Heating and cooling systems will not be affected. Electrical work is detailed in the attachments, basically adding an overhead light and switch. Interior door entrance will be moved to accommodate a wall to help create the office space. Fire extinguisher, fire alarm and security alarm control box will be moved to adjacent wall at the newly placed interior exit door. Refer to floor plan attachment.
