

SECTION 18

Solid Waste

There will be a minimal increase of solid waste to the municipal waste disposal system. The types and estimated quantity of solid waste that are expected to be generated by the current proposed tenant spaces are as follows:

1. Construction Debris

Assume 10 cubic yards per 1,500 square feet of building area:

Building Area: (10,000 S.F.)

$10,000 \text{ S.F.} \div 1,500 \text{ S.F.} = 7\text{+/- cubic yards}$

Quantity: 7 cubic yards
Method of Collection: Contractor
Disposal Facility: Riverside Recycling, or other approved facility

2. Office/Facility Waste:

Below is a conservative estimated quantity of waste potentially generated by proposed tenants requiring disposal.

Quantity: 4 cubic feet/ day or less than a cubic yard per week.
Method of Collection: Commercial hauler (Pine Tree, Waste Management)
Disposal Facility: Regional Waste Systems
