Tammy / Dave:

Attached is a description of the center carrying beam shown on the drawings on the above referenced application, as provided by the steel company.

It is a W14x34 32' in length, capable of carrying a live load of 74 lbs./sq.'

Also, there will be no lally columns as shown on the submitted plans. This beam will be sufficient to carry the necessary loads.

The headers over the doors and windows will be comprised of three 2"x12" of required length to span the openings.

Also, the floor joists and carrying beam are to be rotated 90° from the submitted drawing which will decrease the span from 16' to 12' and thus allowing us to use 2"x8" floor joists.

I trust this will meet your needs.

Call me directly at 582-1800, if you have any further questions.

Thank you for your time and consideration.

Regards,  
Ed Lawrence
