General

The Kitchen Knight® II Restaurant Kitchen Fire Suppression System is a pre-engineered solution to appliance and ventilating hood and duct grease fires. The system is designed to maximize hazard protection, reliability, and installation efficiency Automatic or manual system activation releases a throttle discharge of potassium carbonate solution on the protected area in the form of fine droplets to suppress the fire and help prevent reignition after the discharge is complete.

System Operation

• The Kitchen Knight II Restaurant Kitchen Fire Suppression System has been designed for protecting kitchen hood, plenum, exhaust duct, grease filters, and cooking appliances (such as fryers, griddles, rangetops. upright broilers, charbroilers and woks) from grease fires. The versatile state-of-the-art wet chemical distribution technique, combined with dual, independent activation capability – automatic fusible link or manual release – provides efficient, reliable protection the moment a fire is detected. Once initiated, the pressurized wet chemical extinguishing agent cylinder discharges a potassium carbonate solution through a pre-engineered piping network and out the discharge nozzles. The wet chemical discharge pattern is maintained for a duration of time to ensure suppression and inhibit reignition Expanded capability provides remote manual actuation, gas

equipment shutdown, and electrical system shutdown. This optional equipment will enhance the basic system functions and be applicable when designing custom configurations to suit a particular customer's needs and/or comply with local codes.

- The operating temperature range of the Pyro-Chem Kitchen Knight II
- ► System is 32 "F to 120 "F (0 °C to 49 "C).

Suggested Architect's Specifications

Tho fire suppression system should be of the stored pressure $|_{\rm Well}$ chemical pre-engineered fixed nozzle type manufactured by Pyro-Chem. A carbon dioxide cartridge is designed in compliance with Military Specification "MIL-C-601 G" and shall be used as the pneumatic releasing device for the system. The cartridge shall be an integral part of the control head assembly. The wet chemical storage cylinder shall be D.O.T.-rated for stored pressure of 225 psig, and a

- pressure gauge shall be provided on the cylinder valve for visual inspection. The system shall be capable of automatic and manual actuation. Automatic actuation shall be provided by an appropriate
- number of fusible link detectors mounted in series on a stainless steel
 wire input line to the control head. Manual actuation shall be provided
 by turning a handle on the primary head and/or by an optional remote
 pull station with a dedicated stainless steel input line to the control
 head.
