RE: Project Closeout Document– 1000 Riverside Street, Portland, Maine

Dear Scott,

Per the conditions of the building permit for 1000 Riverside Street, this letter is in efforts to document our on-site observations and review of materials testing performed during the construction phase of this project.

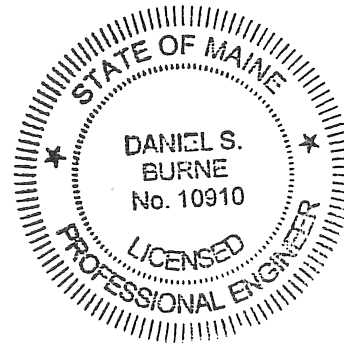

Our office visited the site periodically to observe the construction progress and to review for general conformance with the Construction Documents and design intent. At each visit, we found the construction to be in general conformance with the documents. Any items not in conformance were discussed and resolved, and we are not aware of any outstanding structural issues. In addition, we reviewed material test results that were supplied to us and also found the construction materials to be in conformance with the documents.

Based on our observations and review, we take no exception to the structural work completed for this project.

Sincerely,

BECKER STRUCTURAL ENGINEERS, Inc.
