APPLICATION FOR PERMIT HEATING OR POWER EQUIPMENT

To the INSPECTOR OF BUILDINGS, PORTLAND, ME.

The undersigned hereby applies for a permit to install the following heating, cooking or power equipment in accordance with the Laws of Maine, the Building Code of the City of Portland, and the following specifications:

Location / CBL 222 Auburn Use of Building Public Date _____
 Name and address of owner of appliance Robert Smith 222 Auburn St
Portland
 Installer's name and address Pump Fast Energy 170 Main St
South Portland Telephone 791-5585

Location of appliance:
 Basement Floor
 Attic Roof

Type of Fuel:
 Gas Oil Solid

Appliance Name: _____
 U.L. Approved Yes No

Will appliance be installed in accordance with the manufacture's installation instructions? Yes No

IF NO Explain: _____

The Type of License of Installer:
 Master Plumber # _____
 Solid Fuel # _____
 Oil # _____
 Gas # _____
 Other _____

Type of Chimney:
 Masonry Lined
 Factory built _____
 Metal
 Factory Built U.L. Listing # _____
 Direct Vent
 Type _____ UL# _____

Type of Fuel Tank
 Oil
 Gas

Size of Tank 57
 Number of Tanks 1
 Distance from Tank to Center of Flame _____ feet.
 Cost of Work: \$ 3000
 Permit Fee: \$ _____

Approved

Approved with Conditions

Fire: _____
 Ele.: _____
 Bldg.: _____

See attached letter or requirement

Signature of Installer [Signature] Inspector's Signature _____ Date Approved _____

WARNING

▲ Gaseous fuels such as natural gas and liquid propane (LP) gas are highly explosive. Even the slightest spark can ignite such fuels and cause an explosion. No leakage of fuel is permitted. Natural gas, which is lighter than air, tends to collect in high areas. LP gas is heavier than air and tends to settle in low areas.

1.8 RECONFIGURING THE FUEL SYSTEM

◆ 1.8.1 7 KW

To reconfigure the fuel system from NG to LP, follow these steps:

1. Turn the main gas supply off.
2. Remove the carburetor fuel hose from the outlet port of the demand regulator (Figure 1.4).
3. Disconnect wire #0 and wire #14 from the gas solenoid located on the top of the demand regulator.
4. Remove the demand regulator by rotating counterclockwise.
5. Remove the brass hose fitting from the outlet port of the demand regulator located in housing port on the side of the regulator.
6. Remove the brass metering jet (loosen counterclockwise) from the outlet port of the demand regulator located in housing port on the side of the regulator.
7. Install a new LP metering jet (tighten clockwise) in the outlet port of the demand regulator located in housing port on the side of the regulator.
8. Refit the brass hose fittings to the outlet port of the demand regulator.
9. Reverse procedure steps 1-4 to reinstall demand regulator.
10. Reverse the procedure to convert back to natural gas.

Figure 1.4 – Demand Regulator (7 kW)

NOTE:

The natural gas adjustment screw is preset during installation and should not need any further adjustment.

◆ 1.8.2 V-TWIN

To reconfigure the fuel system from NG to LP, follow these steps:

NOTE:

The primary regulator for the propane supply is **NOT INCLUDED** with the generator. You must supply a fuel pressure of 11 to 14 inches of water column (0.6 psi) to the fuel inlet of the generator.

1. Locate the fuel demand regulator underneath the control panel.
2. Identify both fuel adjustment screws.

NOTE:

One adjustment screw can be accessed from the front of the unit and the second can be accessed from the back of the unit.

3. The unit has been factory set to run on NG fuel. To reset the system to run on LP fuel, turn the two adjustment screws 1/2 turn clockwise. Use a large screwdriver to make this adjustment. Be sure to replace the plastic plug in the back of the enclosure once the adjustment has been made.
4. The fuel system will now allow the engine to run on LP fuel. It may be necessary to make minor adjustments to the set screw settings to achieve maximum power. If you experience problems with the unit producing maximum power, follow the procedure in Section 2.6 (Adjusting the Regulator).

1.9 LOCATION

◆ 1.9.1 GENERATOR

Install the generator set, in its protective enclosure, outdoors, where adequate cooling and ventilating air is always available. Consider these factors:

- Install the unit where air inlet and outlet openings will not become obstructed by leaves, grass, snow, etc. If prevailing winds will cause blowing or drifting, you may need to consider using windbreak to protect the unit.
- Install the generator on high ground where water levels will not rise and endanger it.
- Allow sufficient room on all sides of the generator for maintenance and servicing. A good rule is to allow 3 feet of space on all sides.
- Where strong prevailing winds blow from one direction, face the generator air inlet openings to the prevailing winds.
