Mr. William Kelley
619 Brook Road
Westbrook, Maine

Dear Mr. Kelley:

Permit to construct a 1-story frame addition 18'x27'-11" on right hand side of existing garage to increase garage capacity to 2-car garage and to make other alterations as per plans is being issued subject to compliance with the following:

1. The 2x8 inch garage rafters spaced at 16 inches on centers on a horizontal span of not over 18 feet will need to be of Douglas Fir.
2. The double 2x10 inch garage door headers over the 9 foot wide opening will need to be Douglas Fir members to support the Building Code design roof loads above.

Very truly yours,

Gerald E. Mayberry
Deputy Building Inspection Director

Compt 6 Spring Lane--Height of fence in conflict with Zoning Ordinance

Mr. Donald E. Abood
201-207 Auburn St. (corner Spring Lane)

Copy to: Mr. Martin Bertley
R.F.D. #1
Cumberland Center, Me.

Dear Mr. Abood:-

Our inspector reports that a fence about four feet eight inches in height has been constructed along the side property line farther from Auburn St. to a height of about four feet eight inches above the ground. While no permit is required for the construction of a fence, the Zoning Ordinance applies, as applicable, to fences.

Section 160 of the Ordinance provides that no fence in a front yard shall be more than four feet in height. The front yard is an unoccupied space extending the full width of the lot in front of your dwelling. Thus, that part of your fence between the line of the front wall of your house projected and the street line appears to be about eight inches higher than permitted by the Ordinance.

Now it is realized that you had no intention of violating any law but did so unaware of the requirements. When violation of the Zoning Ordinance is found I am directed to report to the Corporation Counsel of the City who is authorized and directed to take such steps as necessary to bring compliance. As a practical matter this department tries to clear up such situations without recourse to the Legal Department.

Will you be good enough to have the height of the fence reduced at least as far back as indicated above (of course there is no objection to reducing the height of the entire fence) before September 13, 1955, thus making it unnecessary to proceed further.

Very truly yours,

Warren McDonald
Inspector of Buildings

AP 201-207 Auburn St.

January 13, 1954

Mr. Martin Bartley
R.F.D. #1
Cumberland Center, Me.

Dear Mr. Bartley:-

Building permit for construction of a single family dwelling, breezeway, and garage at 201-207 Auburn St. is issued herewith based on the plans filed with the application for permit, but subject to the following conditions:-

1. At your request the length of the dwelling has been increased from 27 1/2 feet to 30 feet. We understand the extra length is to be included in the living room and dining room. Because of this additional length, it will be necessary to provide another lally column for support of the 6x10 girder, located half way between the end of the building and the fireplace chimney. The permit is issued on the basis that this will be done.
2. On the basis that the 6x10 girder will be on a maximum span of eight feet as indicated on the plans, a dressed Douglas Fir timber will be needed for this purpose.
3. A single 2x8 timber should be provided on the ends of the overhanging second floor timbers instead of the boarding being applied directly to the ends of the timbers as shown on the plans.
4. The rear corner posts are required to extend in one length from the sill to the plate supporting the rafters, with lapped splices at least 18 inches long allowed if they cannot be secured in one length.
5. With the exception of the front wall, studs in second story walls and carrying partition are required to extend down to the double 2x4 girts and plates below instead of resting on shoes on top of the second floor timbers.
6. The inside faces of the walls of the garage wherever closer than five feet to the projecting toilet room in the first story are required to be protected from the bottom of the sills to the under side of the roof boarding with perforated gypsum lath and plaster or with sheets of asbestos lumber not less than three-eighths of an inch in thickness. If the breezeway were ever to be enclosed, the same protection would be required the full length of the wall of the garage adjoining the breezeway.
7. Header over garage door opening is required to be not less than 4x8.

Very truly yours,

Warren McDonald
Inspector of Buildings
