Re: Asbestos Demolition Impact Assessment, 392 Auburn St, Portland, Maine.

Dear Mr. Audet:

Abatement Professionals Corporation (APC) is providing you with this letter as a follow up to the site inspection conducted Wednesday morning the 19th of October at the facility at 392 Auburn St, Portland, Maine. The inspection was conducted by Robert W Rickett Jr a Licensed asbestos inspector with the Maine DEP and it was the Garage area of this home that was the basis of this inspection.

The inspection of this building was to look at different building components that may contain asbestos and if found to collect samples of these materials and have them tested at a licensed lab for asbestos content. This inspection resulted in no suspect samples to be collected as the building is made of with construction materials such as wood, concrete fiberglass shingles that wouldn't contain any asbestos. The rear floor was rotted out so entering the facility wasn't an option.

Should any additional suspect building materials be found during any of the demolition/renovation work, the work should immediately stop until additional sampling can be conducted.

We appreciate the opportunity to service your asbestos testing needs, should you require further bulk or air quality sampling please feel free to contact us at any time.

Very truly,

A handwritten signature in black ink, appearing to read 'Robert W Rickett Jr', is located at the bottom left of the page.
