

B2 Electric LLC

Doug/Brian/Portland Code Enforcement,

I have done an inspection of the electrical work done in the basement at 111 Frost hill, for the purpose of an “after the fact permit”. Electrical work looks clean to me; crimped, well stripped insulation length, hooks the proper direction around the device screws and obviously I cant see whats in the walls but the wires are stapled above the drop ceiling and there are connectors in all the recessed lights. Things I fixed of note; GFCI protected the washer outlet, added a bathroom sink outlet GFCI protected from existing GFCI and repaired some “homeowner” done 3 way switching. Per my conversation with Doug I did not change all devices to tamper resistant basically made sure what had been done was safe and fixed issues for safety. Also per Doug's request I ran a new water pipe ground and jumped the meter so that is in place now.

Please let me know if you have any question or need something else from me.
