120 Marginal Way

Bayside Village Student Housing

Southern Maine Student Housing

on Spreadsheet

D-5

Form C 7/97

NOTICE OF INTENT TO FILE

Please take notice that

Southern Maine Student Housing, LLC
247 Commercial Street
Rockport, Maine 04856

is intending to file a Traffic Permit application with the **City of Portland** pursuant to the provisions of 23 M.R.S.A. §704 – A on or about **July 10, 2006**
(anticipated filing date)

This application is for

A proposed 400 bed student housing complex with approximately 3,140 s.f. of retail space. The project is forecast to generate 100 trip ends in the AM peak hour and 131 trip ends in the PM peak hour. The project is expected to be completed by September 2007.

(Summary of project: specifying trip generation at peak hour for the proposed development and the year the project is proposed to be completed and occupied)

at the following location:

At the northeast quadrant of Marginal Way and Preble Street, Tax Map 34A, Block B Lot 1.

(Project Location)

A request for a public hearing must be received by the **Municipality**, in writing no later than 20 days after the application is found by the department to be complete and is accepted for processing. Public comment on the application will be accepted throughout the processing of the application.

The application will be filed for public inspection at the **City of Portland Planning Department** office in **Portland** during normal working hours. A copy of the application may also be seen at the **Department of Transportation Regional Office** in **Scarborough**, Maine

Written public comments may be sent to the following address: **Attention City Planner, City of Portland, Planning Department, 389 Congress Street, Portland, ME 04101-3503.**

CERTIFICATION

This person responsible for preparing this application and/or attaching pertinent site and traffic information hereto, by signing below, certifies that the applicant for traffic approval is complete and accurate to the best of his/her knowledge.

Signature: _____ Re/Cert/Lic No.: _____

Name (print): Thomas L. Gorrell Engineer: **Maine PE #** 9614

Date: 7-5-06 Other: _____

If the signature below is not the applicant's signature, attach letter of agent authorization signed by applicant.

"I certify under penalty of law that I have personally examined the information submitted in this document and all attachments thereto and that, based on my inquiry of those individuals immediately responsible for obtaining the information, I believe the information is true, accurate, and complete. I authorize the Department to enter the property that is the subject of this application, at reasonable hours, including buildings, structures or conveyances on the property, to determine the accuracy of any information provided herein. I am aware there are significant penalties for submitting false information, including the possibility of fine and imprisonment."

This application is for site review ONLY, a building Permit application and associated fees will be required prior to construction.

PROJECT DESCRIPTION

The City of Portland is currently the owner of the subject parcel which will be developed by two separate entities. Campobello Island, LLC has a Purchase and Sale Agreement with the City of Portland for 2.70 acres located between Interstate 295 and Marginal Way, adjacent to Preble Street Extension. Campobello Island, LLC is comprised of two development entities, Southern Maine Student Housing, LLC and Capital, LLC. Southern Maine Student Housing, LLC is proposing a mixed retail and student housing development and Capital, LLC is proposing a mixed retail and office building development. The site has been rezoned from B-5 Urban Commercial Mixed Use Zone to B-7 Mixed Development District Zone. This application is for the Southern Maine Student Housing, LLC portion of the project, with the Capital, LLC portion as separate submission.

The total site area under the Purchase and Sale Agreement is 117,464 SF, or 2.70 Acres, with the proposed Southern Maine Student Housing, LLC portion of the being 57,887 SF, or 1.33 Acres. The site is currently a parking lot which also houses a Maine Department of Environmental Protection air quality station and portable recycling containers. The Maine DEP has a one month notice agreement with the City of Portland to remove their structure from the site. The portable recycling containers will be relocated by the City of Portland. A bus shelter exists on adjacent City owned property, opposite Chestnut Street. The shelter should be removed by the City of Portland for future re-use, due to the fact that the Miss Portland Diner and a vehicular access way are proposed on this site. A temporary bus shelter will not be constructed as part of this project.

The proposed Bayside Village – A Student Housing Complex project is a five story building with a 47,501 SF footprint and 208,332 SF gross area. The ground floor is comprised of 3,143 SF of retail space, bicycle storage area and parking facilities and the second through fifth floors consist of 100 apartment units, with four bedrooms each, and common areas for studying. The apartment units have frontage on Marginal Way, Interstate 295 and the eastern side of the site with the center of the building an open courtyard, with rooftop plantings over the parking garage. Tenants would have one year leases and could be students at any of the local colleges or universities. A 24 hour maintenance staff will be present.

The building is built along the Marginal Way property line with several step-backs from the property line to create visual interest and allow for plantings adjacent to the sidewalk. Two vehicular access points are located on Marginal Way, one directly across from Chestnut Street, on City of Portland property, and the other midway between the Wild Oats access ways. Both drives allow for two way vehicular circulation, with the drive across from Chestnut Street for parking garage access for the student housing and the other drive for service access and access to the neighboring proposed office building and parking garage. The parking garage provides 102 spaces, all dedicated to the student housing.

An eight (8) foot sidewalk is proposed along Marginal Way and five (5) foot sidewalks are proposed within the site. A sidewalk is proposed along the access drive between the student housing and the proposed retail and office building which will connects to Preble Street Extension. A stairway from the rooftop garden connects to this walkway. A bus shelter is proposed at the northeastern corner of the site, along Marginal Way. An internal room provides bicycle storage with access from both the street and parking garage.

Bayside Village Apartments
Marginal Way, Portland, Maine

Architectural Narrative

Bayside Village is a five level student housing community consisting of 100 four-bedroom apartment style residential units to be operated as a private dormitory and associated program spaces such as lobbies, offices, lounges, fitness rooms and meeting rooms. In addition to the residential use on the upper four levels, the building will includes a parking use, retail use and building support spaces on the first level. A large, secure indoor bicycle "parking area" capable of accommodating numerous bicycles as been conveniently located directly off the Marginal Way sidewalk. The property is tied to Portland's extensive pedestrian/bicycle trail system.

The building is configured in two wings – one paralleling I-295 and the other paralleling Marginal Way that will reinforce the streetscape with broken 5 story street walls, which is in keeping with the Bayside plan and new urbanism principals. At 1.33 acres, the sites residential density is 75 units per acre and 301 bedrooms per acre. This density is high for Portland but consistent with the objectives of sustainable new urban neighborhoods.

The building is proposed with a contemporary character and detailing that will help define downtown Portland's first and only 21st century neighborhood. The new Bayside, as a large urban redevelopment project, is ripe for development with a contemporary vocabulary that will contrast yet compliment the traditional vocabulary of old Portland. During pre-submission neighborhood meetings, the Bayside Neighborhood Association has indicated a strong desire to explore a more contemporary approach to design in lower Bayside.

Exterior material proposed are all durable, long life and easily maintained and include painted fiber cement panels with battens, fiber cement shingles, Kynar painted Galvalume mini-rib panels and copings, and brick masonry in a varying configuration along the building façade.

Project Description

The gross square footage of the proposed five-story student housing building is 208,332 square feet with a 47,501 square foot building footprint. The ground level will be a 102 space parking garage and will include 3,143 square feet of retail space. The residential portion of the structure will be four stories comprising 100 apartment units with a total of 400 bedrooms. There will be additional space for on-site management, fitness room, study areas and common areas. There will be a second story roof deck that will provide outdoor public space for the residents. The anticipated population will be students from the local colleges, including USM, MECA, Southern Maine Community College and UNE.

Access to the upper floors is provided by an elevator and stair tower located on the northeast corner of the building and two stairwells located on the south side of the building. There will be a sidewalk that will provide pedestrian linkage to Preble Street that will continue behind the proposed office building on the remaining portion of the city property. Parking for the development will be provided by the on-site 102 space parking garage and an agreement with the adjacent office building project for additional spaces during off peak use between 6 PM and 6 AM as needed. In addition, students attending USM, have as part of their tuition cost a parking space in the new garage recently constructed on campus.

Utilities

Water service to the site will be provided from an existing 8-inch main located on the east side of Marginal Way. Sanitary sewer service will be connected to the existing 36-inch sewer main located on the north side of Marginal Way. Underground electric, telephone and cable T.V. will be provided from existing above ground services located along the east side of Marginal Way. Natural gas will be provided from an existing 6-inch natural gas line located in Marginal Way.

Stormwater Management

Stormwater runoff will be collected through a series of catch basins connected to the city storm drain system in Marginal Way. Refer to the attached stormwater management report for a detailed narrative and calculations.

Part of the of planning process for both of the projects being proposed on the city parcel has included lengthy discussions with the city Community Development Committee and City Council where there was significant input to the projects. In addition, both project applicants met with the Bayside Neighborhood Association to discuss the projects and obtain their input, which has been taken into consideration in developing the plan.

Mr. Alexander Jaegerman,
Director of the Portland Planning Division
and Planning Board Members
City of Portland
389 Congress Street
Portland, Maine 04101

RE: Bayside Village
A Student Housing Complex

Dear Alex and Board Members:

On behalf of Southern Maine Student Housing, LLC, we are pleased to submit this Site Plan and Subdivision Application for a proposed 100 unit student housing project located on Marginal Way in Portland. This submission has been prepared in compliance with requirements of the City of Portland Zoning, Site Plan and Subdivision Ordinances.

The Site

The subject parcel is a portion of the city owned property located on the northeast corner of Marginal Way and Preble Street. The entire parcel is 117,464 SF or 2.70 acres, formally used as a parking lot for the University of Southern Maine. The city currently uses the property for recycling containers and MDEP has an air quality monitoring station. The parcel for Southern Maine Student Housing, LLC will be 57,887 SF or 1.33 acres. The property is bound by Marginal Way to the south, the remaining portion of the city tract to the west, I-295 to the north and the future site of the Miss Portland Diner to the east. The soils are characterized as cut and fill according to the Cumberland County Soil Conservation Service manual. The property is located within the city's new B-7 Mixed Development District that allows mixed commercial and residential use.

THE STAPLES SCHOOL
70 CENTER STREET
PORTLAND, MAINE 04101

Telephone (207) 774-4427
Fax (207) 874-2460
Website www.mitchellassociates.biz

two buildings. The plaza area including the landscaped area totals 10,972 sq. ft. Exclusive of the landscaped area and the six (6) foot wide walkway (on the easterly side of the plaza) the actual useable area is about 2,700 sq. ft. of surface area.

The landscaping area provides a desirable amenity for the residents and a privacy buffer for individual units but does reduce the amount of open area within the plaza. If the Board has a concern that the surface area of the plaza should be increased given the number of residents in the complex, this could be considered by reducing the size of the landscaped areas in the wider areas of the plaza. Depending on the size of the plaza, this could have building code implications in terms of this being a "public assembly" area which the project consultant can explain.

Active recreation facilities are within a walking distance to Back Cove Park, Baxter Boulevard Trail and Deering Oaks.

Department of Planning and Development
Planning Division

To:	Chair Beal and Members of the Portland Planning Board
From:	Richard Knowland, Senior Planner
Date:	Prepared on: July 18, 2006 Prepared for: July 25, 2006
Re:	Bayside Village Housing Development, Vicinity of 120 Marginal Way

A workshop has been scheduled to consider an application by Southern Maine Student Housing, LLC (Realty Resources Chartered) for a proposed 100 unit housing development in the vicinity of 120 Marginal Way. The project is called Bayside Village. The apartments are designed and intended for use by college students. The project is subject to site plan, conditional use (parking garage) and subdivision review. A traffic movement permit will be required. Site plans, building elevations and background information are shown on Attachments A, B and C.

The site is located on the city owned parking lot on the northerly side of Marginal Way. Commonly known as the "USM parking lot", the City is in the process of dividing the property into four (4) parcels for redevelopment. At the Board's August 8th workshop, a subdivision plan for the USM parking lot will be presented. The subdivision plan has been scheduled for a September 26th public hearing along with the Bayside Village project. The subdivision plan will include the following lots: an office building (corner of Marginal Way and Preble Street), Bayside Village, a parcel for Miss Portland Diner and a parcel conveyed to Maine DOT on the easterly end of this site.

Findings

Land Area:	1.33 acres
Zoning:	B-7
Dwelling Units:	100
Proposed Uses	Housing and Retail (3,143 sq. ft.)
Parking Spaces:	102
Building Floor Area:	208,332 sq. ft.
Building Footprint:	47,501 sq. ft.
Building Height:	5 stories (59 feet)

The proposed development consists of two five (5) story buildings. The first floor of both buildings consists of a one level parking structure with some retail space along Marginal Way. Both buildings are built within the footprint of the parking structure. Both buildings have four stories of apartments above the first floor. At the second level (the roof of the parking structure) is an open air plaza between the buildings which provides passive open space for residents. One of the buildings is sited along Marginal Way and is about 350 feet long while the second building is located near the rear property line and is the same length.

This development has been designed and intended for college students. Each unit will have four (4) bedrooms. The development is privately owned and is not affiliated with a specific school. Tenants are expected from USM, UNE, MECA and SMCC.

Site Development and Facade Design Considerations

The development parcel is 383 feet long with an average depth of about 150 feet. Both buildings have been sited parallel to Marginal Way given the shallow depth of the lot. The wall of the Marginal Way building covers 90% of the lot street frontage which helps establish an urban edge along the street.

The parcel is located in zone C of the Bayside Height Overlay Map which allows a maximum height of 85 feet. The minimum height in this zone is three (3) floors. In earlier discussions with the Applicant, staff encouraged the Applicant to consider a higher building height which would free up more of the site for open space and provide the opportunity for a more distinctive gateway building. The Applicant indicated that building to a higher height was not feasible because it would require more expensive building code requirements which would effect the economic feasibility of the project.

The submission states "the building is proposed with a contemporary character and detailing that will help define Downtown Portland's first and only 21st century neighborhood". Bayside is indeed an area in which contemporary architecture can and should be encouraged. The vast number of vacant or underutilized properties particularly near Marginal Way provide an opportunity to reinforce the Bayside gateway with high quality contemporary architecture. The recently approved Pearl Place housing development by Avesta is the first contemporary design proposed in Bayside.

The proposed project faces several design challenges and opportunities including a height cap of 5 stories, location in a highly visible gateway, an extended building mass along Marginal Way and I-295 and a limited lot depth. The building will be constructed using a pre-manufactured unit module system.

Given the site location in a highly visible gateway and its extended façade along Marginal Way and I-295, the façade design (whether contemporary or traditional) and the

choice of exterior materials is critical. Comments from Carrie Marsh, Urban Designer, are shown on Attachment M.

Vehicle Circulation

A driveway on the far easterly end of the parking garage will provide vehicle access from Marginal Way. Vehicles circulate in and out of the parking garage from this driveway exclusively. This is a shared driveway with the Miss Portland Diner lot and the future Bayside commuter train stop (if it is built in the future). The footprint of the driveway is owned by the City but the applicant will have an access easement over it. The driveway has an appropriate alignment with Chestnut Street for a traffic light should traffic volumes from Chestnut Street warrant one in the future

The Applicant will also have an easement over the office building driveway for service and maintenance purposes.

Traffic Report

This project qualifies for a traffic movement permit. The applicant is in the process of scheduling a scoping meeting. Once the scoping meeting has been held, a traffic report will be prepared and submitted for review. See Attachment D.

Parking

The proposed parking garage will provide 102 spaces. Other projects in Bayside have been approved with a ratio of one (1) space per dwelling unit but given the type of use (student apartments) and the number of bedrooms (four per unit) the actual parking demand is expected to be higher.

Gorrill Palmer Consultants (G-P) has prepared a parking demand analysis for this project. See Attachment E. Assuming a parking demand of 0.67 spaces per student bed (Institute of Transportation Engineers), Gorrill Palmer calculated a peak demand of 268 spaces. Other sources calculated a range of 0.34 to 0.52 spaces per bed but the consultant used the more conservative ratio.

Assuming additional off-site spaces are needed, G-P reviewed the peak parking demand for student housing during typical weekday business hours since off-site parking may be limited due to the parking demand of area businesses. Peak hour demand for student parking is forecast to be 74% of overall demand or 199 spaces if all 102 student spaces were spaces used, this would yield a potential deficit of 97 spaces. The applicant has indicated they have an agreement with the adjacent office building project for additional spaces during off peak use between 6 p.m. and 6 a.m. as needed. Documentation of this agreement should be provided. Another parking resource is the new USM parking garage. All students have, as part of their tuition, a deduction for use of the parking garage.

Pedestrian Circulation

The site plan indicates a new public sidewalk will be constructed along the entire street frontage of the site. Walkways are provided along the easterly and westerly edges of the property for access into the building. The interior plaza provides pedestrian circulation between the two buildings and from one end of the site to the other.

There has been discussion of providing a walkway along the rear property line of the office building as a short cut to Preble Street for residents walking to Hannaford Supermarket and USM. This is an important circulation route that should be addressed either in this review or in the review of the office building.

It is likely that a number of residents will walk to the USM campus. The most direct pedestrian route to the campus is crossing Preble Street by Hannaford Supermarket but unfortunately there is not a designated pedestrian crossing.

An indoor bicycle storage area is included within the retail space along Marginal Way.

Infrastructure

The site plan incorporates the recommendations of the Marginal Way Street Concept Design. These improvements include a sidewalk, esplanade, street lighting and on-street parking. Due to grading issues, part of the esplanade is on the building side adjacent to the on-street parking.

Stormwater Quality

The submission indicates that no stormwater quality treatment is proposed "as this project will result in the redevelopment of an existing parking lot that will become covered..." The parking garage must provide an appropriate sized water quality treatment unit. The existence of a parking lot undergoing redevelopment does not grandfather it from water quality treatment requirements.

Stormwater Management

Catch basins will be used to control stormwater prior to discharging into the municipal storm drain in Back Cove. No detention is proposed for the site since the stormwater will discharge quickly to the municipal storm drainage system and pass into Back Cove.

Open Spaces

Open space for residents is provided by an open air plaza that is sited between the two buildings on the second level of the complex. The court yard area provides a passive open space amenity for residents. The plaza is framed by landscaping along the edges of the

and Planning Board Members
City of Portland
389 Congress Street
Portland, Maine 04101

RE: Bayside Village – A Student Housing Complex

Dear Rick and Board Members:

The following documentation has been prepared to address the proposed off-site leased parking spaces for the for the Bayside Village Student Housing Development. We have prepared a location plan and a pedestrian circulation plan to show the relationship of the off-site parking to the student housing development on Marginal Way.

The existing parcel is owned by Mr. Ross Furman and is located at 138 Kennebec Street. The parcel is a 15,170 S.F. (0.348 acre) gravel parking lot. Mr. Furman has leased parking spaces on this site and the city tax record has the property listed as a parking lot for tax purpose. Based on the lot configuration and the city dimensional requirements, forty (40) 9'x19' spaces can be located on the site.

The existing lot is located on the corner of Kennebec Street and Preble Street. Pedestrian access would be via Preble Street to Marginal Way. The walking distance from the student housing to the parking lot is approximately 1,200 feet or about a five minute walk. Realty Resources - Southern Maine Student Housing, LLC. has revised the letter of intent to lease 30 spaces with ability to lease up to 40 spaces from Mr. Furman, with reference to the maximum two year lease period with option to renew. We are requesting that the board consider, as a condition of approval that an executed lease be provided before issuance of any building permit. The revised letter of intent will be submitted separately.

Enclosed for your review are the following:

- Copy of Assessor Tax Record
- Tax Map Location Plan
- Aerial Plan locating parking lot and pedestrian route
- Photographs of proposed pedestrian route

General Information

Attachment To Formwork – Liners are attached to the form using TEK screws through the face of the liner spaced 12" C-C. Optional form mounting T-nuts embedded through the plywood backing is available for Elastospec panels.

Form Release – Apply with low flow, wide angle, flat spray nozzle and wipe with a cloth to insure a complete even coat to the entire form liner surface. Do not over apply form release agent. Protect treated form liners from precipitation, dust, and debris. Do not apply to reinforcing steel. **Dayton Superior Liner Coat? (J-4 LC)** form release is approved for all form liner materials.

Technical Support – Contact Spec Formliners, Inc. 888 429-9550

PORCELAIN – THE LIFETIME FINISH FOR SCHOOLS, HOSPITALS, AND HIGH-TRAFFIC AREAS

GRAFFITI RESISTANCE

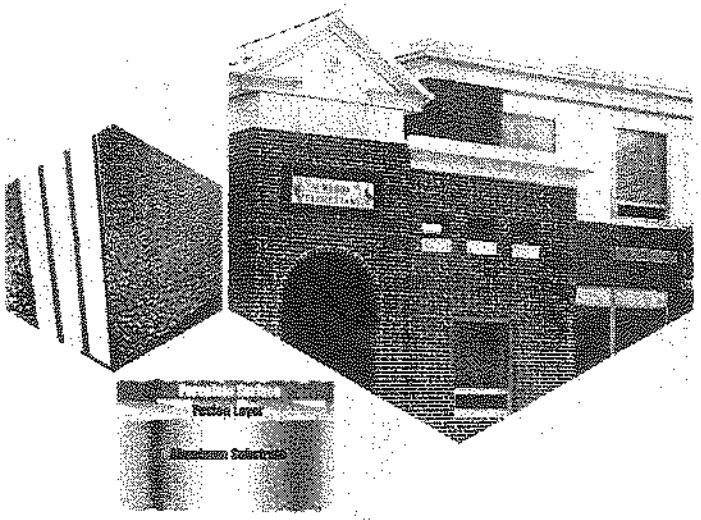
Because porcelain enamel is a vitreous glass finish that is fused to the base metal, it is nearly impervious to any graffiti and abuse. It can be cleaned to its original appearance simply and easily.

COLORFAST

Porcelain is one of the most color-stable products ever developed. The color oxides become part of the finish and are fused to the base metal at temperatures in excess of 1,000 degrees F. That is why porcelain is known as the "permanent" finish.

COLOR MATCHING

Porcelain finishes can be formulated to match almost any project design. Mapes has 24 standard colors and an inhouse ability to match custom colors quickly and accurately.



ALUMINUM AND STEEL

Mapes porcelain panels are available in both textured aluminum and smooth steel surfaces. The unique textured porcelain on aluminum eliminates oil canning and will not rust or spall. Porcelain on smooth steel is also available for those applications where a ferrous product is required. Both finishes will not crack or craze when subjected to long-term harsh environments.

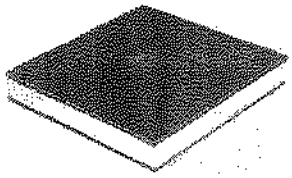
MAPES PANEL DESIGN ALTERNATIVES

Available in all architectural finishes: Porcelain / Kynar / Anodized / Baked Enamel

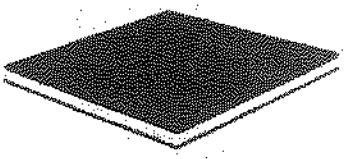


MAPES® INFILL PANELS

Laminated glazing infill that improves energy efficiency, abuse resistance and design flexibility.

- For use in all major window and curtainwall systems

mapes.com/infill

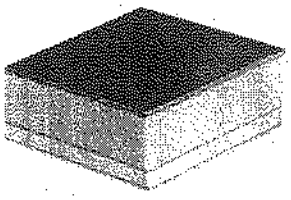


MAPESPAN®

Spandrel glass laminated into a unitized panel with an interior finish.

- Single source factory laminated
- Reduces field labor and fabrication

mapes.com/mapespan

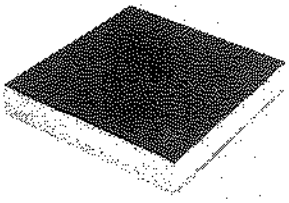


MAPESTOP®

Fire resistant infill panels designed to meet local code requirements.

- Class A rated
- 15-30 minute fire rated

mapes.com/mapestop

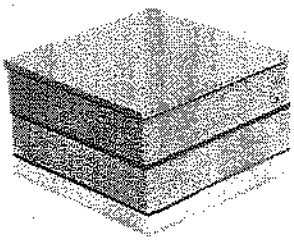


CORELITE®

Laminated infill panels with corrugated high density polyethylene substrates.

- Water resistant substrates
- Light weight

mapes.com/corelite

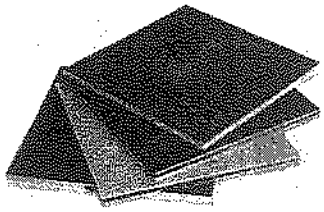


MAPESOUND®

Panels designed to improve the acoustical performance of window and curtainwall systems.

- STC up to 55
- Available in all architectural finishes

mapes.com/mapesound

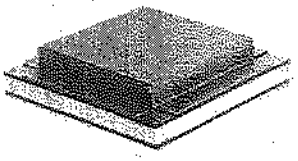


MAPES® VENEER & GLAZING

Panels designed to replace standard glass for all glazing infill.

- Abuse resistant / unbreakable
- Fascia, soffit, wall facing applications

mapes.com/veneer



MAPESHAPE®

Formed edge panels improve energy efficiency and design options.

- Flush with frame glazing option
- Butt glazing

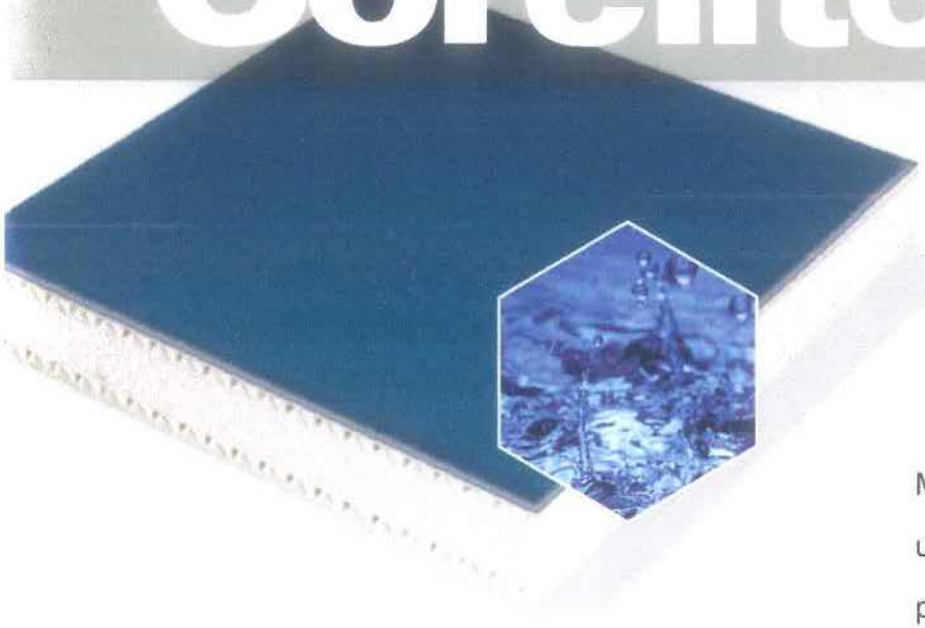
Corelite™



MOISTURE RESISTANT PANELS

Mapes Corelite panels are manufactured utilizing a corrugated high-density polyethylene (HDPE) substrate for the most demanding glazing applications. Corelite is available in both 1/4" veneer and insulated compositions. It is an ideal solution for window replacement, curtainwall infill, veneers and fascias. Corelite is available with all Mapes' standard finishes. Corelite panels are moisture resistant and designed for most infill and glazing projects.

FEATURES

- Lightweight
- Field Fabrication
- Moisture Resistant
- High Thermal Value
- Available In All Architectural Finishes

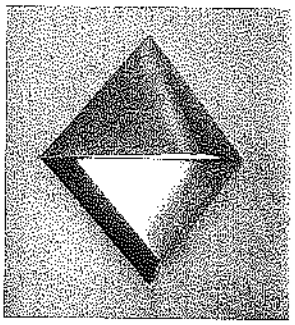
SHAPER™

695-WP-DB



- Half Pyramid Exterior Wall Luminaire with Back Panel
- Direct illumination
- Wet Location
- Solid bronze construction
- Incandescent, MH and CFL lamp options
- 18" Half Pyramid

DESCRIPTION

LAMPS / BALLASTS

Incandescent:	1 - 60W max (A-19).
Fluorescent:	1 - 26W, 32W or 42W (4-pin triple tube CFL).
H.I.D.:	1 - 50W, 70W or 100W metal halide (ED17/medium base).

Incandescent available 120V only. Electronic ballasts are standard for fluorescent or H.I.D. Quartz Restrike (QR) available for H.I.D.

MATERIALS / FIXTURE LOCATION

C.U.L. listed for wet or damp exterior locations.
Solid Bronze construction for all other finishes.

FINISHES

Diffuser: Clear tempered refractive glass for HID lamping.
White acrylic for incandescent and fluorescent lamping.
Hood and Back: NBZ, SGB, SGW, CC VG, SZ.

MOUNTING

Standard - 4" J-Box or stucco ring.

MEMORANDUM

06-0125

TO: Rick Knowland

FROM: Dan Goyette, PE – Development Review Coordinator, Woodard & Curran, Inc.

DATE: July 19, 2006

RE: Bayside Village, 120 Marginal Way.

Woodard & Curran has reviewed the Major Site Plan and Subdivision Review submission for the proposed project at 120 Marginal Way. This project requires developing a lot by two separate entities. The application is just for the Southern Maine Student Housing, LLC. The project involves constructing a 100 unit student housing complex with a parking facility and retail store on the ground floor.

Documents Reviewed

- Cover letter addressed to Alexander Jaegerman, Director of the Portland Planning Division, dated July, 11, 2006, from Robert B. Metcalf, Mitchell & Associates.
- City of Portland Major Site Plan and Subdivision Review Application for Southern Maine Student Housing, LLC, 120 Marginal Way, dated July 11, 2006
- Stormwater Management Report prepared by Gorrill-Palmer Consulting Engineers, Inc., dated July 2006.
- Engineering plan set prepared by Gorrill-Palmer Consulting Engineers, Inc., sheets 1-10, dated 7/11/06, signed and stamped by William C. Haskell, PE.

1. General Comments

A. The applicant should confirm that the survey for the project coincides with approved City standards. The survey does tie to the vertical datum of NGVD 1929. However, it should also tie to the Maine State Plane Coordinate System (2-zone projection) and West Zone using the NAD 1983 (HARN) Datum.

A. General notes on Sheet 6 call for the use of Casco Traps. A detail should be provided.

B. A pavement repair detail should be provided for the areas of Marginal Way where pavement will be temporarily removed.

C. Stormwater and sanitary sewer tie in details should be provided.

D. It is unclear what type of sidewalk will be constructed in front of the housing complex (brick, concrete, concrete pavers). A clarification should be made.

5 Application requires State Fire Marshal approval.

BAYSIDE VILLAGE – ARCHITECTURAL NARRATIVE

A Student Housing Complex

Marginal Way, Portland, Maine

BUILDING PROGRAM

Bayside Village is a five-level student housing community consisting of 100 four-bedroom apartment style residential units. In addition to the apartments, the building includes associated program spaces such as lobbies, offices, lounges, fitness rooms and meeting rooms. The building will also include a parking use, a retail use and building support spaces on the first level. A large, secure indoor bicycle "parking area" capable of accommodating 96 bicycles has been conveniently located directly off the Marginal Way sidewalk. The property's location is conveniently adjacent to Portland's extensive pedestrian/bicycle trail system.

BUILDING CONFIGURATION

This single building is configured in two wings on the upper floors – one paralleling I-295 and the other paralleling Marginal Way. The Marginal Way facade will reinforce the streetscape with 5 story, broken street wall, which is in keeping with the Bayside plan and new urbanism principals.

RESIDENTIAL DENSITY

At 1.328 acres, the sites residential density is 75 units per acre and 301 bedrooms per acre. This density is high for Portland but consistent with the objectives of sustainable new urban neighborhoods.

DESIGN CHARACTER

The building is proposed with a contemporary character and detailing that will help define downtown Portland's first and only 21st century neighborhood. The new Bayside, as a large urban redevelopment project, is ripe for development with a contemporary vocabulary that will contrast yet compliment the traditional vocabulary of old Portland. During pre-submission neighborhood meetings, the Bayside Neighborhood Association has indicated a strong desire to explore a more contemporary approach to design in lower Bayside. The discussion of this approach will continue through the formal neighborhood meeting process.

EXTERIOR BUILDING CLADDING SYSTEM

The building's exterior cladding is proposed primarily of a variety of durable, long life and easily maintained Kynar 500/Hylar 5000 painted metal panels, copings, trim and sun control systems. Windows will be solid vinyl single hung type units. Architectural concrete panels are proposed along with an aluminum storefront system at the first floor retail façade and main entrance along Marginal way. ***See Exterior Material Schedule, attached.***

This current submission differs from the previous sketch plan submissions it two ways:

1) The upper levels of the building is now proposed as "all metal" façade to provide a more unified façade character.
2) The lower level finish material has been changed from face brick to ***a combination of*** architecturally formed cast in place concrete panels ***and an aluminum storefront system*** to provide for a more unified contemporary façade character.

Green Building Design Components

Bayside Village will be designed to incorporate many of the latest green building initiatives so as to result in a building that is energy efficient to operate and promote sustainability. As part of this project, the owner will pursue LEED certification of the project. Several of the unique green components proposed are:

- Tri-generation Mechanical/Electrical Plant – The project will incorporate a gas fired system that will provide heat, hot water, cooling and electricity for the project. Though costly to install, this system is expected significantly reduce energy use for the building.
- Recycle excess heat from the tri-generation system to provide a no-energy cost sidewalk snow melt system at the second level courtyard area, thus providing a safe and usable walking surface in winter and reducing maintenance costs for this difficult to manage area.
- Metal Building Cladding – Metal building cladding is considered highly advantageous as a green building system due to its high reflectivity of solar gain, high recycled material content, 100% recycle ability, light weight, durability, long life minimal maintenance requirements.
- Incorporate low-water plant materials and Xeriscape landscaping concepts at the courtyard patio deck in conjunction with raised planter boxes that will support larger and more varied plant materials.
- The wood frame modular units will incorporate numerous green components.
- The specification will call for Energy Star Rated Appliances and Materials.

CONSTRUCTION SCHEDULE

In order to achieve occupancy on August 1, 2007, planning board approval must be secured by September 26, 2006, construction must begin no later than November 1, 2006.

Bayside Village – Case Studies: Contemporary Metal-Clad Residential Buildings

A Student Housing Complex

Marginal Way, Portland, Maine

Recent Shift of Metal Cladding from an Industrial to a Contemporary Material

The use of metal cladding in contemporary architecture has become increasingly popular in recent years. In response to the rising cost or traditional construction materials, the metal industry has shifted its market focus from utilitarian industrial uses to buildings of all uses and types: Commercial Office, Residential; Retail, Recreational; Government, Institutional and more. As a result, the range of metal choices, quality of material coatings and attention to details have evolved to include options that can result it quality, attractive, long life developments.

Metal as a Quality 21st Century Contemporary Material

As a result of the above, the design community has embraced metal building cladding as a material that meets their cost, quality and aesthetic objectives. Hence, the use of metal as a preferred contemporary exterior cladding material has grown exponentially over the past five to 10 years. With better quality and more design option enhancements being introduced every year, metal siding will become more prevalent in coming years.

The Lasting & "Green" Qualities of Metal

Metal Cladding has come a long way in the past few decades. What was traditionally prone to paint system failures, corrosion and rusting has evolved, using 21st century technology, into a high quality, maintenance free architectural cladding material with a longevity rivaling that of brick and stone (with less maintenance). This has been achieved through the incorporation of corrosion resistant alloys and materials to create the panels and the use of high performance, durable coating systems with long color retention. As a result, a quality 21st metal siding system has the ability to perform structurally and aesthetically form many decades without significant maintenance and is considered a "Green" product. Also, when regular maintenance is schedule, it is less costly (and thus apt to be scheduled) than more traditional materials such as brick or wood siding.

Case Studies

The following are case studies of multi-family residential buildings that have recently been developed around the country using metal-cladding systems. While relatively new to northern New England with its many traditional neighborhoods, the redevelopment of former industrial neighborhoods such as Bayside offer the opportunity to introduce a 21st century design vocabulary as a complementary, yet clearly contemporary sector of our cities.

LOWER LEVEL

(LOWER FLOOR ENTRY/RETAIL/PARKING/MECHANICAL)

The lower level of the development consists primarily of uses that serve and support the primary residential use of the building. Specifically, this include the building's primary entrance facing Marginal Way and secondary entrances, significant retail frontage facing Marginal Way, 102 spaces of parking accesses from the building's east side, a large indoor bike parking area, a solid waste management room and various mechanical and electrical support spaces. This portion of façade consists of a combination of an aluminum storefront window system with both clear glass and Mapes opaque architectural panels, cast-in-place concrete panels using a textured form liner system and painted ornamental steel ventilation grills. Additionally, this portion of the façade will incorporate a metal accent band with 6' sun control devises to accentuate entrance points, architectural building mounted lighting and building and retail tenant identification. They following are specification of proposed lower level materials:

Storefront System: Kawneer (or equal) aluminum insulated storefront system "clear anodized" finish with clear Low E glazing and Mapes CORELITE laminated insulated spandrel panels with aluminum UNA-CLAD Kynar 500/Hylar 5000 finish, "Charcoal Grey" finish (See attached cut sheets).

Cast In Place Concrete Panels: Cast in place concrete panels utilizing textured Fitzgerald Formliners Pattern No. 16989 Split Slate (See attached cut sheets).

Metal Accent Band: Firestone UNA-CLAD fluorocarbon aluminum panels, custom broken to profile indicated, with KYNAR 500 / HYLAR 5000 exterior finish, "Charcoal Grey".

Ornamental Metal Ventilation Grills (South, East and West Elevations) : Custom fabricated steel grills, epoxy coated, color to match "Charcoal Grey", see drawings.

Garage Screening (Interstate 295): Black vinyl coated galvanized chain link fence, span between garage columns.

Building Mounted Lighting: Shaper 695-WP-DB MH/50 SZ, Satin Zinc finish.

Building and Retail Tenant Signage: Self-illuminated stand-off signage, size and location as indicated.

UPPER LEVELS

(FIRST FLOOR (2ND LEVEL) THROUGH FOURTH FLOOR (5TH LEVEL) RESIDENTIAL AND SUPPORT SPACES)

The upper levels of the development consists primarily of residential uses. This portion of façade consists of a combination of vertically and horizontally oriented aluminum panels of various detail and design, solid vinyl windows, sun control devices and building signage. They following are specification of proposed lower level materials:

Metal Panel Siding Systems: Firestone UNA-CLAD fluorocarbon aluminum panels with KYNAR 500 / HYLAR 5000 exterior finish as scheduled below:

VR-Classic Omega Panel, horizontal orientation w/matching corner trim, "Cityscape"
UC-500 Wall Panel, vertical orientation w/matching corner trim, "Charcoal Grey"
UC-501 Wall Panel, horizontal orientation w/matching corner trim, "Hemlock Green"

Solid Vinyl Windows: Kohler solid vinyl single hung units and pairs with UNA-CLAD trim to coordinate with color field.

Sun Control Devises: UNA-CLAD clear anodized aluminum custom designed as per drawing details.

Building Signage: Self-illuminated stand-off signage, size and location as indicated.

Supreme Single Hung

Beautiful and practical, the Supreme Single Hung window is crafted by Peter Kohler Windows to be one of the finest windows in its class.

It's loaded with standard features like perimeter weather-stripping, security night lock, cam operated lock, and a stainless steel coil spring balance system. The Supreme Single Hung is the right choice for performance and quality.

Features:

Hardware • Coil Balance • Spiral Balance • Nightlock	**Exterior Moulding** • Plain Frame (no-j-trim, brick mold or nail flange) • Nail Fin Only • 1 1/2" Brick Mold & J-trim • 1 1/2" Brick Mold & sill	**Grills** • Georgian Simulated Divided Grills (SDL)
Interior Jam Extensions • Vinyl Clad • Primed	**Glass** • LoE, LoE/argon, Energlas® • Gray or Broze Tint Glass (Extended Lead times Required)	**Exterior Trim** • Wide Brick Mold (3 1/2")
Interior Drywall • 1/2" Add on Drywall Return • 3/4" Add on Drywall Return

Good afternoon Rick,

In response to your discussions with Ed Marsh of Southern Maine Housing LLC/Realty Resources concerning the designation of the proposed student housing project we have prepared the following response. To address the requested zoning clarification for the proposed use we are changing the classification to a lodging and boarding use. The appropriate revisions will be made to the application documents to conform with the change in use designation.

Infrastructure Financial Contribution Form

Obtain an Account Number from Paul Colpitts, Chief Acct., (ext. 8665) prior to the distribution of this form.

Amount: $90,000.00

City Account Number: 710-0000-236-70-00

Project Name: Bayside Village Student Housing

Application ID #: #2006-0125
(from Site Plan Application Form)

Project Location: 120 Marginal Way

Project Description: Bayside Village Student Housing

Funds intended for: Transportation Demand Management Fund

Applicant's Name: Bayside Village Student Housing, LLC.

Applicant's Address: 247 Commercial Street, Rockport, ME 04856-5964

Expiration:

☐ If funds are not expended or encumbered for the intended purpose by _____, funds, or any balance of remaining funds, shall be returned to contributor within six months of said date.

☒ Funds shall be permanently retained by the City.

☐ Other (describe in detail) _____

Form of Contribution:

☐ Escrow Account

☒ Cash Contribution

Interest Disbursement: Interest on funds to be paid to contributor only if project is not commenced.

Terms of Draw Down of Funds: The City shall periodically draw down the funds via a payment requisition from Public Works, which form shall specify use of City Account # shown above.

Date of Form: 11-14-07
Planner: Richard Knowland **Person Completing Form:** Richard Knowland

---

- **Attach the approval letter, condition of approval or other documentation of the required contribution.**
- The original form, copy of the check, copy of report of receipts and all attachments shall be given to Debbie Marquis.
- The original check, copy of this form, and all attachments shall be filed by the Planning Division Office Manager.
- A copy of all of the above documents shall be given to the following people:

Peggy Axelson (Finance), Michael Bobinsky (Public Works), Michael Farmer (Public Works), Kathi Earley (Public Works), Alexander Jaegerman (Planning), Barbara Barhydt (Planning), Planner for project and Applicant.

CITY OF PORTLAND, MAINE
PLANNING BOARD

November 20, 2006

Mr. Ed Marsh
Realty Resources (Southern Maine Student Housing, LLC)
247 Commercial Street
Rockport, Maine 04856

RE: Bayside Village Student Housing; Southern Maine Student Housing, LLC, (Applicant); 120 Marginal Way; #2006-0125; CBL- 034A-B-001

Dear Mr. Marsh:

The Planning Board considered the proposal by Southern Maine Student Housing, LLC to create a 400 bed student lodging house in the vicinity of 120 Marginal Way and voted on the motions described in this letter.

On October 10, 2006, the Planning Board voted 5-0 (Hall and Tevanian absent) that the Bayside Village housing development was in conformance with the Conditional Use (parking garage) Standards of the Land Use Code.

On November 14, 2006, the Planning Board voted 5-2 (Silk and Tevanian opposed) that the Bayside Village housing development was in conformance with the Site Plan Ordinance of the Land Use Code, including Traffic Movement Permit. The approval was granted for this project with the following conditions:

i. That the Applicant shall revise the plan and implement the recommendations contained in Tom Errico's (Traffic Review Consultant) memo dated October 20, 2006, except that the Applicant shall not be required to operate a car-share program.

ii. The Applicant shall contribute $90,000 towards a Transportation Demand Management Fund to be established by the City of Portland to implement Transportation Demand Management measures in Bayside. The parking monitoring study of the site, which will be performed by the Applicant as noted in Mr. Errico's memo, will be used to guide the use of those funds. For the purposes of conducting the monitoring study full occupancy shall be considered 90% of the beds.

iii. That the pedestrian easement for the easterly side of the building shall be submitted for City staff review and approval.

iv. That all exterior signs shall be subject to Planning staff review and approval.

v. That the project lighting shall be subject to Planning staff review and approval.

vi. That final details and materials of the building façade shall be subject to Planning staff review and approval.

vii. In the event that the project changes from student housing as presented by the Applicant to another use, the Applicant shall submit such changes to the Planning Board for review and approval.

viii. The project is approved for a maximum of 400 beds with one occupant per bed.

iv. Applicant shall provide a binding lease agreement for off-hours parking at 84 Marginal Way.

The approval is based on the submitted site plan and the findings related to site plan and conditional use review standards as contained in Planning Report 52-06 and Planning staff memo dated for November 14,2006.

Please note the following provisions and requirements for all site plan approvals:

1. Where submission drawings are available in electronic form, the Applicant shall submit any available electronic Autocad files (*.dwg), release 14 or greater, with seven (7) seta of the final plans.

2. A performance guarantee covering the site improvements as well as an inspection fee payment of 2.0% of the guarantee amount and 7 final sets of plans must be submitted to and approved by the Planning Division and Public Works prior to the release of the building permit. If you need to make any modifications to the approved site plan, you must submit a revised site plan for staff review and approval.

3. The site plan approval will be deemed to have expired unless work in the development has commenced within one (1) year of the approval or within a time period agreed upon in writing by the City and the applicant. Requests to extend approvals must be received before the expiration date.

4. A defect guarantee, consisting of 10% of the performance guarantee, must be posted before the performance guarantee will be released.

5. Prior to construction, a pre-construction meeting shall be held at the project site with the contractor, development review coordinator, Public Work's representative and owner to review the construction schedule and critical aspects of the site work. At that time, the site/building contractor shall provide three (3) copies of a detailed construction schedule to the attending City representatives. It shall be the contractor's responsibility to arrange a mutually agreeable time for the pre-construction meeting.

6. If work will occur within the public right-of-way such as utilities, curb, sidewalk and driveway construction, a street opening permit(s) is required for your site. Please contact Carol Merritt at 874-8300, ext. 8828. (Only excavators licensed by the City of Portland are eligible.)

The Development Review Coordinator must be notified five (5) working days prior to date required for final site inspection. The Development Review Coordinator can be reached at the Planning Division at 874-8632. Please make allowances for completion of site plan requirements determined to be incomplete or defective during the inspection. This is essential as all site plan requirements must be completed and approved by the Development Review Coordinator prior to issuance of a Certificate of Occupancy. Please schedule any property closing with these requirements in mind.

If there are any questions, please contact Richard Knowland at 874-8725.

Sincerely,

Kevin Beal, Chair
Portland Planning Board

Rick –

The following summarizes my comments and approval conditions for the above project.

Traffic Movement Permit

The proposed project meets requirements for the Traffic Movement Permit subject to the following conditions:

- The applicant shall be responsible for the implementation of roadway improvements along Marginal Way in the area of their site frontage as illustrated on Conceptual Roadway Improvement Plans B and C prepared by Gorrill-Palmer Consulting Engineers, Inc. included in their October 4, 2006 submission. I would note that the plans are conceptual in nature and some minor modifications (see comments in next bullet) may be necessary during the development of final design plans. I would like to note that the improvement plans include the removal of the flush concrete island in Marginal Way and the installation of a new crosswalk at the Chestnut Street intersection. Additionally, I would note that improvement plans provide acceptable conditions assuming the Bayside Village project proceeds independent of 84 Marginal Way and can be integrated with adjoining improvements on Marginal Way that may occur as part of 84 Marginal Way or other developments that may happen to the east.

- Some comments that will need to be addressed during the development of final design plans for Marginal Way and Preble Street improvements under the full implementation of improvements with both Bayside Village and 84 Marginal Way. These are **NOT** the responsibility of this applicant, but are necessary for improvements in the area that the applicant will be contributing financially:

    1. Lane widths on Preble Street southbound should not exceed 12 feet and the bicycle lane should be 5 feet. The curb on the westside of Preble Street will need to be relocated accordingly.
    2. The plans should note that the improvement plan will include all necessary lane assignment signs and traffic signal modifications.
    3. Pavement markings guiding the double left from Preble Street should be provided. Commentary on whether the turning area for this double left is different from current conditions.
    4. The plans indicate that a minor curb adjustment is required on the south side of Marginal Way near Wild Oats. I would suggest that the curb not be moved at this time (it seems wasteful to move it now and adjust it later as implementation of the master plan improvements take place) and the island width be reduced to allow for appropriate roadway receiving width.
    5. The plan should depict the lanes on all approaches such that we can confirm acceptable lane alignment can be provided through the intersection.

6. Radii at the Marginal Way/Preble Street intersection should be minimized as much as possible.
7. The left-turn entry into 84 Marginal Way off Preble Street may need to be modified to account for City maintenance requirements. Additionally, it is suggested that the 12-foot lane be reduced to 11-feet and a two foot concrete rumble strip be provided to separate left-turn movements into the site from northbound Preble Street traffic.
8. The painted transition area in advance of the left-turn lane into 84 Marginal Way should be a stamped material to be determined during the design process.

- The applicant shall be responsible for the implementation of a new crosswalk with supplemental features on Preble Street as illustrated on Conceptual Roadway Improvement Plan E prepared by Gorrill-Palmer Consulting Engineers, Inc. included in their October 4, 2006 submission. I would note that the plan will need to be modified such that bicycle lanes can be provided in the area of roadway widening for the raised median island. I would note that this plan is for the stand alone implementation of the crosswalk. The design of the crosswalk will be significantly different as compared to plans being review for 84 Marginal Way. Both crosswalk designs are acceptable to the City, although some minor modifications may be necessary as the plans are further developed for construction.

- In an effort to offset traffic, bicycle, and pedestrian impacts to the Marginal Way corridor, the applicant shall contribute $43,500.00 towards the implementation of the Marginal Way Pedestrian and Bicycle Master Plan improvement concepts.

- In an effort to relieve traffic pressure to left-turn movements from Preble Street to eastbound Marginal Way the applicant shall contribute $9,000.00 towards the extension of Somerset Street. The City seeks implementation of Somerset Street as soon as possible to offer travel alternatives to Marginal Way.

Site Plan

The following presents an update to my September 8, 2006 comments.

1. The secondary driveway should be designed to be compatible with anticipated future conditions (right-turn entry/exit only).
   The plans have been revised and I find them acceptable. I would ask that the applicant install appropriate signage that reinforces turn restrictions. This should be coordinated with the City Traffic Engineer.

2. The applicant should provide documentation that METRO has reviewed the proposed plans for a bus stop and bus shelter and approve the location and design elements.
   No further comment.

3. The primary driveway entrance opposite Chestnut Street should be redesigned to allow for optimal approach capacity. Based upon future development opportunities, including the Miss Portland Diner and an AMTRAK Rail Station, it is suggested that two approach lanes be provided. The public right-of-way on this approach is 36 feet and it is my recommendation that this space consist of two 10-foot approach lanes, one 11-foot entry lane, and one 5-foot sidewalk.
   The plans have been revised to reflect this suggestion.

4. I would suggest that Eric Labelle closely review the plans as it relates to geometric modifications

RE: Response to Comments
Traffic Impact Study Review
Bayside Village

Dear Rick:

Gorrill-Palmer Consulting Engineers, Inc. is pleased to respond to the review comments made by Tom Errico dated September 8th following his review of the traffic and parking study for the proposed Bayside Village. For ease of review, each comment has been repeated below followed by our response. It is our understanding that responses to the site plan comments will be provided by Mitchell and Associates.

Comment 1 *– The study indicates that traffic generation from the existing parking lot is greater than future traffic projections for the project. I'm surprised at the level of traffic measured and would ask that additional information be provided about current traffic usage at the parking lot.*

Response – This parking lot currently serves several uses. It is utilized for a park-and-ride, hosts a skate park, and as a recycling operation. In addition, this location is also utilized in the winter for vehicle impoundment during snow emergencies. Based on site observations, on occasion vehicles will use this parking lot as a cut-through to get to and from Preble Street Extension. While any single one of these uses does not generate significant traffic on its own, when combined, the trip generation exceeds that of the proposed use.

Comment 2 *– The traffic analyses at the Marginal Way/Preble Street intersection assumes a change in traffic signal phasing to "protected/permitted" left-turn phasing on Marginal Way. I need to review this change with Jim Carmody and I will provide my opinion in the future.*

Response – MaineDOT currently permits protected/permitted phasing for left turns against a single lane of through traffic. Based on our analyses, providing a protected left turn phase only results in much less efficiency, either requiring more green time for the left turn protected phase or additional delay for the movement. Our office recommends implementation of this phase structure.

Comment 3 – *The applicant should summarize specific queue lengths for all movements at the study intersections following build-out of the project.*

Response – The queue lengths are provided on the following tables for both the existing and proposed post-development conditions. It should be noted that the southbound approach of Preble Street Extension has been revised to provide a three lane approach consisting of an exclusive left turn lane, an exclusive through lane, and a shared through/right turn lane as specified in Comment 4.

Preble St. SB – TR	N/A		170	505	100	290

Comment 4 *– The analyses at the Marginal Way/Preble Street intersection needs to revised to account for the following:*

- *The current Marginal Way Pedestrian and Bicycle Master Plan recommends that the Preble Street southbound approach consist of one left lane, one through lane, and one shared through/right lane.*
- *An alternative analysis should be conducted such that the Preble Street southbound approach consists of a left turn lane, a shared left/through lane, and a shared through/right lane. Split phasing signal operations will need to be incorporated.*

Response – The requested analyses are enclosed with this letter. As can be seen by the alternative analysis, the split phase approach results in acceptable levels of service. Our office would note that this method results in the need for two receiving lanes headed eastbound on Marginal Way, one of which would need to drop in accordance with the Marginal Way Pedestrian and Bicycle Master Plan. This may result in poor lane utilization on whichever lane is dropped. The level of service results are shown on the following tables:

LOS Results for Marginal Way and Preble Street: Proposed

Overall Performance	**35**	**D**	**35**	**D**	**40**	**D**	**41**	**D**

Comment 5 *– The City will be accelerating the construction of Somerset Street extension between Preble Street and Elm Street such that motorists originating from Preble Street Extension, with destinations to the Bayside area, have alternatives to using Marginal Way. The applicant will be asked to make a monetary contribution to this improvement.*

Response – No response required.

Comment 6 *– I continue to review the parking information provided. On-site parking will not be sufficient for the anticipated parking demand. The applicant will need to provide documentation on how they will specifically meet parking needs.*

Response – Some of the parking demand can be met at the USM parking garage, as discussed in a letter from USM enclosed with the traffic impact and parking study. It is our understanding that the Applicant is seeking an agreement with 84 Marginal Way (also in the approvals process) to obtain off-peak parking.

Comment 7 *– The conceptual improvement plan needs to incorporate other aspects of the Marginal Way Pedestrian and Bicycle Master Plan in the vicinity of the Marginal Way/Preble Street intersection. 63 Marginal Way is currently implementing improvements along their frontage. The Preble Street southbound approach will consist of a three-lane approach. It is my suggestion that the conceptual improvement plan include Marginal Way between Forest Avenue and Franklin Arterial. Gorrill-Palmer has prepared such a plan (for another project) and I would suggest that it*

be required for this project. The Applicant may be asked to make a monetary contribution to other Marginal Way improvements.

Response – Enclosed with this letter is a copy of the requested improvement plan of Marginal Way from Forest Avenue past the project's site frontage.

Gorrill-Palmer Consulting Engineers, Inc. appreciates the opportunity to respond to these comments and looks forward to your review of our responses. Should you have any questions or require any additional information, please feel free to contact me.

Sincerely,

Gorrill-Palmer Consulting Engineers, Inc.

Intersection Summary

Area Type: Other
Cycle Length: 110
Actuated Cycle Length: 98.7
Natural Cycle: 95
Control Type: Actuated-Uncoordinated
Maximum v/c Ratio: 0.90
Intersection Signal Delay: 38.6 Intersection LOS: D
Intersection Capacity Utilization 80.0% ICU Level of Service D
Analysis Period (min) 15

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

Splits and Phases: 92: Marginal Way & Preble St. Ext.

Intersection Summary

Area Type: Other
Cycle Length: 110
Actuated Cycle Length: 102.3
Natural Cycle: 90
Control Type: Actuated-Uncoordinated
Maximum v/c Ratio: 0.97
Intersection Signal Delay: 43.2 Intersection LOS: D
Intersection Capacity Utilization 81.8% ICU Level of Service D
Analysis Period (min) 15

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

Splits and Phases: 92: Marginal Way & Preble St. Ext.

RE: Bayside Village - A Student Housing Complex
Diminimus Change Request

Dear Rick:

The following documentation and responses have been prepared to address comments concerning the diminimus change request submitted on September 6, 2007.

Garage Lighting: Enclosed is the manufacture cut sheet for the garage light fixture proposed as a replacement for the previous florescent fixture to address concerns with the visibility and glare. The fixture will be suspended from the recessed area of the garage/roof deck. The optical configuration shields the lamp from normal viewing angles by the reflector section of the luminare.

Trash Enclosure: In response to staff concerns with the proposed relocation of solid waste management, we offer the following:

The Owner has met with several trash removal companies to discuss the internal trash room configuration as proposed during the approval process. In each instance the same issues concerning liability and safety were raised regarding use of role out containers. To address these concerns, the use of the proposed "pak-trainer" - which incorporates a compactor and significantly reduced the size of the container - was recommended as the most sensitive option to contain refuse and maintain as low of an impact as is feasible.

Regarding location, the only option to locate an external trash enclosure is on the northeast side of the site within the city R.O.W. as shown on the submitted plan. The

area between the Bayside Village and 84 Marginal (Intermed) properties contain the chiller unit for the student housing project and an emergency generator for 84 Marginal Way leaving no room for an enclosure. We have studied the orientation options for the gate access and circulation requirements. Due to turning and access requirements, the proposed location and orientation is necessary for vehicle access. In addition, site grading and drainage requirements to accommodate run off from I-295 restrict access options.

CWS Architects, in response to your comments concerning integration of the enclosure into the building architecture, have prepared the enclosed annotated elevations for your review. The operational requirements of emptying the container require a vertical overhead lifting process that precludes the opportunity to provide a roof covering for the structure. The revised sketch proposes a more contemporary form with sloped masonry walls that match the building's façade materials and align below the building's accent band. The gates to the enclosure have been squared-off to tie in with the contemporary elements of the design and will be painted dark green to coordinate with the color of other accent materials on the site.

Noise Level, Chiller Unit: We have assembled documentation regarding the proposed unit sound rating and wanted to meet with Marge Schmuckal to review the data. Unfortunately Marge, as you know, has been on vacation. As soon as possible upon Marge's return, we will meet with her to address the issue.

Enclosed for your review are the following:

- Garage light fixture cut sheets
- Trash enclosure elevations

We trust these responses and supporting documents address your concerns. Should you any questions or additional comments, please do not hesitate to call me.

Sincerely,
Mitchell & Associates

BOB METCALF

Robert B. Metcalf

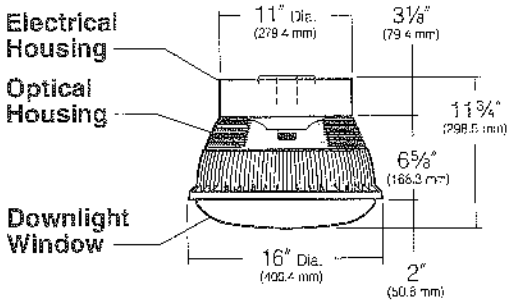
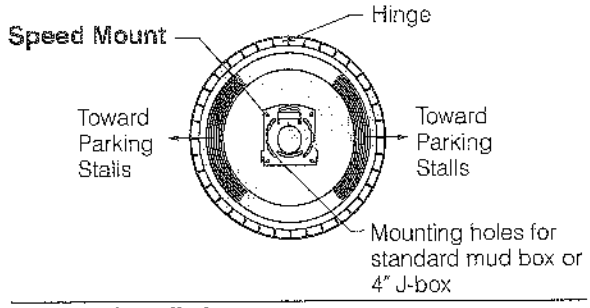
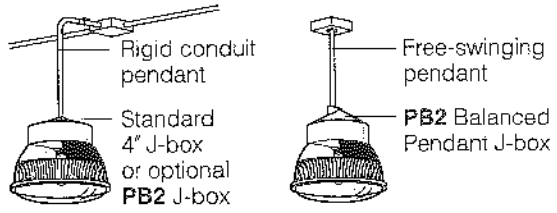
Specifications





Pendant Installations



- For Free conduit pedant mount, use a standard 4" junction box with a centered pendant entry.
- For Free-swinging pendant mount, use the optional **PB2** Balanced Pendant Juction Box (page **3**).
- For all pendant installations where bird shroud protection is desired, use the optional **PB2** Balanced Pendant Junction Box (page **3**).

Speed Mount: Formed steel, electro-zinc plated for mounting to standard 4" junction box or mud box. Hooks are designed to hang fixture, freeing both hands for field wire connections. Allows tool-free fixture mounting to junction box, with integral anti-theft locking device.

Ballast Housing: Die-cast, low copper (<0.6% Cu) aluminum alloy for direct mounting to the Kim Speed Mount. Wire entry is sealed with a silicone grommet.

Optical Housing: One-piece injection molded UV stabilized polycarbonate (minimum wall thickness .125") with clear uplight window. Reflector has vertical facets to prevent reflected light from passing through the lamp envelope. Uplight window contains two prismed sections to spread additional light downward in the direction of parking stalls. Optical Housing is secured to Electrical Housing with full silicone gasketing around the perimeter.

Uplight Reflector and Socket: One-piece hydroformed aluminum with Alzak® surface facing prisms and diffuse white surface facing uplight window areas. Socket is 4KV pulse rated medium base. Reflector is removed by loosening three screws allowing access to the electrical components.

Downlight Window: One-piece clear injection molded UV stabilized high temperature acrylic (polycarbonate optional). Attached to optical housing with a "no-tool" quick release spring hinge and three captive phillips-head "shoulder" type screws to prevent overtightening (tamper-resistant hex socket screws optional). Perimeter is fully gasketed with silicone. Convex shape yields maximum light transmission.

HID Electrical Components: High power factor ballasts for -20°F. starting, rigidly mounted inside electrical housing and prewired with leads extended out top of housing.

Induction Fluorescent Lamp Electrical Components: Complete HF generator and induction lamp system is furnished. Induction lamp system is high power factor, rated for -4° starting.

Optical Configuration: In the direction of the driving lanes, luminaire downlight is of the "cutoff" classification with uplight provided for illuminating ceiling and beams. In the direction of parking stalls, luminaire is a "semi-direct" type with partial uplight refracted downward for additional fill-light in the parking stalls. In all directions, lamp is shielded from normal viewing angles by the reflector section of the luminaire.

Finish: PGL4: Platinum Silver color on ballast housing only. Super TGIC thermoset polyester powder coat paint over titanated zirconium conversion coating. Clear optical housing.

CAUTION: Fixtures must be grounded in accordance with national, state and/or local electrical codes. Failure to do so may result in serious personal injury.

Standard Features

Fixture

Cat. No. PGL4

Contemporary garage luminaire. Die-cast, low copper (<0.6% Cu) aluminum alloy ballast housing with Platinum Silver Super TGIC powder coat paint over titanated zirconium conversion coating, one-piece clear optical housing. Downlight optical reflector visible through optical housing material.

Electrical Module

PMH = Pulse Start Metal Halide
MH = Metal Halide[1]
HPS = High Pressure Sodium
IF = Induction Fluorescent

[1]**NOTE:** Refer to ANSI Type for proper lamp.

Lamp Watts	Lamp Type	Line Volts
175	MH	277

CAUTION: All manufacturers of metal halide lamps recommend turning them off for 15 minutes once per week when under continuous operation. This will reduce the risk of arc tube rupture at end of life. Also, color temperature may differ between manufacturers of metal halide lamps. See lamp manufacturer's specification sheets.

All fixtures are available pre-lamped by Kim. Consult representative for pricing.

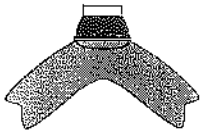
Optional Features

Narrow Downlight Optics
Cat. No. ☐ **DL-N**
☐ **No Option**

Two-piece hydroformed aluminum reflector with Alzak finish. Reflector fills optical housing and provides minimal uplight distribution. Symmetric downlight distribution is narrower than standard symmetric pattern, with increased intensity.

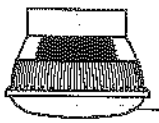


Wide Downlight Optics
Cat. No. ☒ **DL-W**
☐ **No Option**

Two-piece hydroformed aluminum reflector with Alzak finish. Reflector fills optical housing and provides minimal uplight distribution. Symmetric downlight distribution is similar to standard symmetric pattern, with increased intensity.

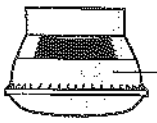
Polycarbonate Downlight Lens
Cat. No. ☐ **LS**
☐ **No Option**

One-piece clear injection molded UV stabilized polycarbonate Downlight Lens replaces the standard acrylic.
CAUTION: Use only when fixture vandalism is anticipated within the parking garage. Service life is reduced by UV discoloration from Metal Halide lamps. High Pressure Sodium lamps are recommended to promote full service life.



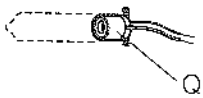
Painted Optical Housing
Cat. No. ☐ **PSH**
☐ **No Option**

Conceals the down-light optical housing reflector. The color is matched to the electrical housing.



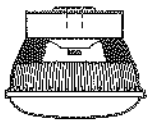
Quartz Standby
Cat. No. ☒ **QS**
☐ **No Option**

Integral current sensing relay energizes a T-4 mini-can socket during lamp warm-up and after power interruption. Socket de-energizes prior to the H.I.D. lamp reaching full brightness. T-4 mini-can halogen lamp by others; 100 watt maximum.
NOTE: Input amps will increase by .80 with this option. Not available on 85IF.



Tamper-Resistant Lens Screws
Cat. No. ☐ **TS**
☐ **No Option**

Captive hex socket (allen) shoulder screws provided for downlight window instead of standard phillips-head screws.



Optional Features

Fusing (internal only):
Cat. No. **(see chart at right)**
☐ **No Option**

High temperature fuse holders factory installed inside the fixture housing. Fuse is included.

Line Volts:	120V	208V	240V	277V	347V	480V
Cat. No.:	☐ **SF**	☐ **DF**	☐ **DF**	☐ **SF**	☐ **SF**	☐ **DF**

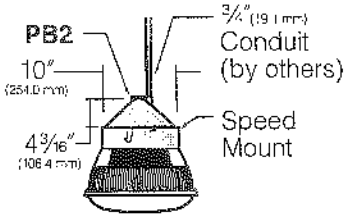
Lamp Included
Cat. No. ☐ **Lamp Included**
☐ **No Option**

To order fixtures with lamp included and installed, add "**lamp included**" suffix to catalog number. Will also include **QS** option lamp (when specified).

Balanced Pendant Junction Box and Bird Shroud
Cat. No. ☐ **PB2**
☐ **No Option**

Cast aluminum, finished to match fixture body. Offset ¾" NPT pendant entry to balance fixture in free-swinging installation. For fixture mounting, Kim Speed Mount attaches directly to Balanced Pendant Junction Box (PB2).

Free-swinging pendant installations



Standard 4" J-Box installations

becomes important to migate that impact. The plan has been changed so that gate is not visible from Chestnut Street (which is good) but it is
still going to be visible from the public that will be using the public
parking lot (train stop).

The dumpster issue was not discussed at wednesdays staff review meeting. It will be discussed at next wednesdays meeting so if there is
any further info that would be helpful.

>>> "Bob Metcalf" <rmetcalf@mitchellassociates.biz> Wednesday, November
14, 2007 >>>
Hi Rick,

Could you give me a call when you get a chance, I need to review the trash enclosure fro Bayside Village to see where we are in the review.

Bob

From: Rick Knowland
To: rmetcalf@mitchellassociates.biz
Date: Fri, Sep 21, 2007 3:40 PM
Subject: Fwd: marginal way student housing projecy

>>> "Rick Knowland " <RWK@portlandmaine.gov> Friday, September 21, 2007 >>>
Bob, This email is intended to summarize staff comments received to date regarding revisions to the Marginal Way Student Housing Project. The revisions are descibed in submissions with cover letters dated 9-07-07 and 9-18-07.

Noise...Marge Schmuckal indicates that the air cooler chilier does not meet the B-7 noise standards. Further documentation will need to be submitted on how this standard will be addressed.

Signage Plan...The signage plan along Marginal Way is acceptable. Obviously a sign permit will be required. In terms of the BV signs, I'll need to have more internal discussion on this. Why are 3 BV signs needed? If this were a hotel (but it is not)I could understand some of the signs. Has there been consideration to just having one sign facing I-295?

Engineering ...I've talked to Mike Farmer of Public Works and he didn't have any concerns with the revisions.

Shaper Lighting Fixture... This fixture looks familiar. Please confirm that it is nonglaring and deflected downward.

Dumpster...I have received a variety of thoughts regarding the dumpster enclosure. These comments are precipitated by the fact that the dumpster is proposed on city land and is at the terminating view of Chestnut Street. I understand the statements in the earlier submission regarding the dumpster location but I think other options need to be explored further. If after exhausting all other options and this site is the only one available, I would suggest that the architect modify the design of the dumpster so it looks more like an appendage of the building. I offer no solutions but perhaps the walls could be raised higher and follow the design plane of the first floor of the building. The doorway of the proposed dumpster would normally be ok if tucked way at the rear of a property somewhere but in this case its at the terminating view of Chestnut Street. Any other design alternatives? It is my understanding that the location of dumpster was driven by a conversation with a trash hauler operator. Perhaps a conversation with another trash hauler would yield another alternative.

Building Elevations...Unless we have further questions, we are ok with the building elevations. I talked to Ben and he answered several questions.

Landscaping...Jeff looked at the plan and his ok with it.

Bob, These are the comments received to date. Should there be others I will forward them to you accordingly.

To: <bmetcalf@mitchellassociates.biz>
Date: 10/31/2007 3:31:01 PM
Subject: student housing project

Bob, At Wednesday's staff review meeting we discussed the dumpster/compactor issue. After looking at the plan there isn't any enthusiasm among staff for a dumpster enclosure on city owned land and its location at the terminus of Chestnut Street. I appreciate the fact that this use will generate alot of waste but this solution doesn't have any support.

I don't know what to say other than to seek another alternative. Perhaps may be a smaller trash (low tech) hauler out there that does not have as sophisticated equiptment as larger haulers that could accommodate their needs. I suppose if the applicant doesn't like staff's answer on the revision this could be referred to the planning board. Someone from City whether it be the City Manager's Office or the City Council will presumably need to approve a license for the dumpster on City land.

Re: Bayside Village Student Housing Complex, 132 Marginal Way, Portland, ME

Dear Rick:

This letter represents a follow-up to your job site visits were we reviewed the metal panel revisions at the Bayside Village Project. The following items are revisions to the original approval by the Planning Board on November 14, 2006:

1) Glass Fiber Reinforced Concrete (GFRC) Parapets and Accent Band. During the approval process with the City, GFRC was approved for the parapets and accent band around the building. During the design review process of the building it was discovered that GFRC is not a valid product for a wood building application. Prefabricated GFRC should be anchored to structural steel and not wood. Therefore, the design team went back to the original plan of metal panels (as shown on the rendering drawing attached for your use) for the parapets and accent band around the building. The product being used is the same material as the silver metallic Firestone Una-Clad UC-501 vertical oriented metal siding wall panels in the courtyard, except bent at a different profile. Attached for your use is the cut sheet on the UC-501 panel system and two elevations showing the dimensions of the parapet and accent band layout. Please note that the panels will only be approximately 20" wide in order to minimize the chance of any "oil canning." The original rendering showed metal panels approximately 40" wide.

2) Citadel ProCore Prefinished Architectural Panels. The ProCore panel that was approved by the City was a two-piece reveal molding system shown on the attached detail 1B System Isometric, Option 2. The ProCore panel that we are looking to install at the Bayside project is a two-piece extruded molding system shown on the attached detail 1A System Isometric, Option 1. The extruded molding system was ordered and delivered to the jobsite instead of the approved reveal molding. The issue we have is the moldings have a custom coating on them, and it will take seven to eight weeks for the new moldings. With this fast track project this delay would be detrimental to finishing on time. The panels between the moldings are the same. The only difference is the moldings that surround each panel. The reveal molding (option 2) has a ½" gap in the cover plate, while the extruded molding (option 1) has a flat cover plate. The rest of the metal siding systems around the perimeter of the building all have flat moldings which would match option 1. Both moldings cost the same, have the same finish, have the same performance, and have the same warranty. The original reveal molding has the possibility of collecting debris and insects in the ½" gap where the extruded molding system is a flat cover plate.

131 Presumpscot Street, Portland, ME 04103
207-874-2323 www.pizzagalli.com

The project next door (84 Marginal Way) is also using the same extruded moldings on their approved panels as we are proposing for Bayside. This would give both adjacent buildings the same look.

Both of the above items are time sensitive, and we would appreciate anything the City can do to approve the proposed materials by Tuesday May 20, 2008. Thank you for your help in finalizing the metal panel system for the Bayside Village Student Housing Project.

Sincerely,
Pizzagalli Construction Company

RE: Bayside Village - A Student Housing Complex
Diminimus Change Request

Dear Rick:

The following documentation and responses have been prepared to address comments concerning the diminimus change request submitted on September 6, 2007.

Garage Lighting: Enclosed is the manufacture cut sheet for the garage light fixture proposed as a replacement for the previous florescent fixture to address concerns with the visibility and glare. The fixture will be suspended from the recessed area of the garage/roof deck. The optical configuration shields the lamp from normal viewing angles by the reflector section of the luminare.

Trash Enclosure: In response to staff concerns with the proposed relocation of solid waste management, we offer the following:

The Owner has met with several trash removal companies to discuss the internal trash room configuration as proposed during the approval process. In each instance the same issues concerning liability and safety were raised regarding use of role out containers. To address these concerns, the use of the proposed "pak-trainer" - which incorporates a compactor and significantly reduced the size of the container - was recommended as the most sensitive option to contain refuse and maintain as low of an impact as is feasible.

Regarding location, the only option to locate an external trash enclosure is on the northeast side of the site within the city R.O.W. as shown on the submitted plan. The

area between the Bayside Village and 84 Marginal (Intermed) properties contain the chiller unit for the student housing project and an emergency generator for 84 Marginal Way leaving no room for an enclosure. We have studied the orientation options for the gate access and circulation requirements. Due to turning and access requirements, the proposed location and orientation is necessary for vehicle access. In addition, site grading and drainage requirements to accommodate run off from I-295 restrict access options.

CWS Architects, in response to your comments concerning integration of the enclosure into the building architecture, have prepared the enclosed annotated elevations for your review. The operational requirements of emptying the container require a vertical overhead lifting process that precludes the opportunity to provide a roof covering for the structure. The revised sketch proposes a more contemporary form with sloped masonry walls that match the building's façade materials and align below the building's accent band. The gates to the enclosure have been squared-off to tie in with the contemporary elements of the design and will be painted dark green to coordinate with the color of other accent materials on the site.

Noise Level, Chiller Unit: We have assembled documentation regarding the proposed unit sound rating and wanted to meet with Marge Schmuckal to review the data. Unfortunately Marge, as you know, has been on vacation. As soon as possible upon Marge's return, we will meet with her to address the issue.

Enclosed for your review are the following:

- Garage light fixture cut sheets
- Trash enclosure elevations

We trust these responses and supporting documents address your concerns. Should you any questions or additional comments, please do not hesitate to call me.

Sincerely,
Mitchell & Associates

Robert B. Metcalf

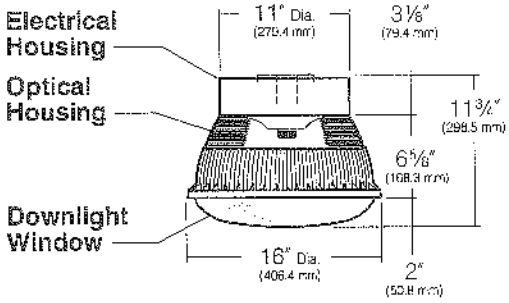
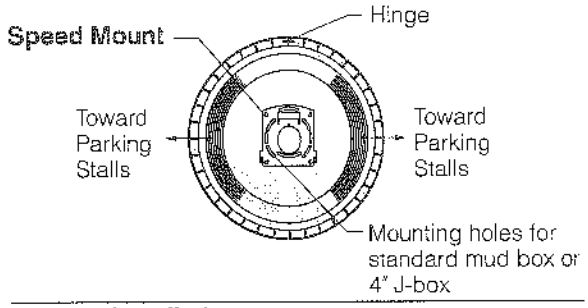
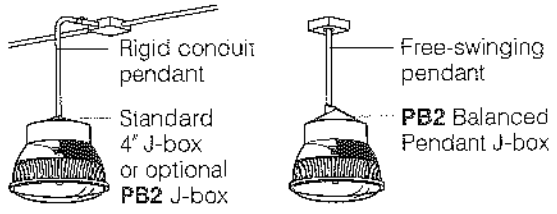
Page: 1 of 4

Specifications





Pendant Installations



- For Free conduit pedant mount, use a standard 4" junction box with a centered pendant entry.
- For Free-swinging pendant mount, use the optional **PB2** Balanced Pendant Juction Box (page **3**).
- For all pendant installations where bird shroud protection is desired, use the optional **PB2** Balanced Pendant Junction Box (page **3**).

Speed Mount: Formed steel, electro-zinc plated for mounting to standard 4" junction box or mud box. Hooks are designed to hang fixture, freeing both hands for field wire connections. Allows tool-free fixture mounting to junction box, with integral anti-theft locking device.

Ballast Housing: Die-cast, low copper (<0.6% Cu) aluminum alloy for direct mounting to the Kim Speed Mount. Wire entry is sealed with a silicone grommet.

Optical Housing: One-piece injection molded UV stabilized polycarbonate (minimum wall thickness .125") with clear uplight window. Reflector has vertical facets to prevent reflected light from passing through the lamp envelope. Uplight window contains two prismed sections to spread additional light downward in the direction of parking stalls. Optical Housing is secured to Electrical Housing with full silicone gasketing around the perimeter.

Uplight Reflector and Socket: One-piece hydroformed aluminum with Alzak® surface facing prisms and diffuse white surface facing uplight window areas. Socket is 4KV pulse rated medium base. Reflector is removed by loosening three screws allowing access to the electrical components.

Downlight Window: One-piece clear injection molded UV stabilized high temperature acrylic (polycarbonate optional). Attached to optical housing with a "no-tool" quick release spring hinge and three captive phillips-head "shoulder" type screws to prevent overtightening (tamper-resistant hex socket screws optional). Perimeter is fully gasketed with silicone. Convex shape yields maximum light transmission.

HID Electrical Components: High power factor ballasts for -20°F. starting, rigidly mounted inside electrical housing and prewired with leads extended out top of housing.

Induction Fluorescent Lamp Electrical Components: Complete HF generator and induction lamp system is furnished. Induction lamp system is high power factor, rated for -4° starting.

Optical Configuration: In the direction of the driving lanes, luminaire downlight is of the "cutoff" classification with uplight provided for illuminating ceiling and beams. In the direction of parking stalls, luminaire is a "semi-direct" type with partial uplight refracted downward for additional fill-light in the parking stalls. In all directions, lamp is shielded from normal viewing angles by the reflector section of the luminaire.

Finish: PGL4: Platinum Silver color on ballast housing only. Super TGIC thermoset polyester powder coat paint over titanated zirconium conversion coating. Clear optical housing.

CAUTION: Fixtures must be grounded in accordance with national, state and/or local electrical codes. Failure to do so may result in serious personal injury.

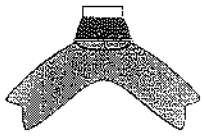
Optional Features

Narrow Downlight Optics
Cat. No. ☐ **DL-N**
☐ **No Option**

Two-piece hydroformed aluminum reflector with Alzak finish. Reflector fills optical housing and provides minimal uplight distribution. Symmetric downlight distribution is narrower than standard symmetric pattern, with increased intensity.

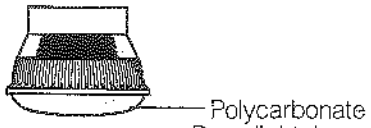


Wide Downlight Optics
Cat. No. ☒ **DL-W**
☐ **No Option**

Two-piece hydroformed aluminum reflector with Alzak finish. Reflector fills optical housing and provides minimal uplight distribution. Symmetric downlight distribution is similar to standard symmetric pattern, with increased intensity.

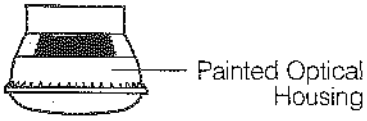
Polycarbonate Downlight Lens
Cat. No. ☐ **LS**
☐ **No Option**

One-piece clear injection molded UV stabilized polycarbonate Downlight Lens replaces the standard acrylic.
CAUTION: Use only when fixture vandalism is anticipated within the parking garage. Service life is reduced by UV discoloration from Metal Halide lamps. High Pressure Sodium lamps are recommended to promote full service life.



Painted Optical Housing
Cat. No. ☐ **PSH**
☐ **No Option**

Conceals the down-light optical housing reflector. The color is matched to the electrical housing.

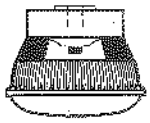


Quartz Standby
Cat. No. ☒ **QS**
☐ **No Option**

Integral current sensing relay energizes a T-4 mini-can socket during lamp warm-up and after power interruption. Socket de-energizes prior to the H.I.D. lamp reaching full brightness. T-4 mini-can halogen lamp by others; 100 watt maximum.
NOTE: Input amps will increase by .80 with this option. Not available on 85IF.

Tamper-Resistant Lens Screws
Cat. No. ☐ **TS**
☐ **No Option**

Captive hex socket (allen) shoulder screws provided for downlight window instead of standard phillips-head screws.



Optional Features

Fusing (internal only):
Cat. No. **(see chart at right)**
☐ **No Option**

High temperature fuse holders factory installed inside the fixture housing. Fuse is included.

Line Volts:	120V	208V	240V	277V	347V	480V
Cat. No.:	☐ **SF**	☐ **DF**	☐ **DF**	☐ **SF**	☐ **SF**	☐ **DF**

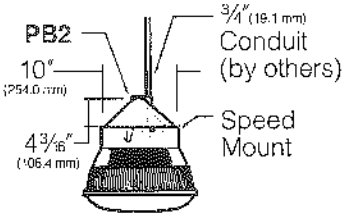
Lamp Included
Cat. No. ☐ **Lamp Included**
☐ **No Option**

To order fixtures with lamp included and installed, add "**lamp included**" suffix to catalog number. Will also include **QS** option lamp (when specified).

Balanced Pendant Junction Box and Bird Shroud
Cat. No. ☐ **PB2**
☐ **No Option**

Cast aluminum, finished to match fixture body. Offset ¾" NPT pendant entry to balance fixture in free-swinging installation. For fixture mounting, Kim Speed Mount attaches directly to Balanced Pendant Junction Box (PB2).

Free-swinging pendant installations



Standard 4" J-Box installations

RE: Bayside Village Site Activity

Dear Erica,
This letter is to confirm that the Planning Division is authorizing preliminary site activities on the Bayside Village site. These site activities are limited in scope and shall constitute only the following activities:

1. Remove the pavement on site
2. Remove and store the curbing on site
3. Clear and grub next to Marginal Way
4. Clear and grub the 295 side
5. During the week of July 23, 2007, the building corners and baseline may be laid out, but no foundation work of any kind may be commenced.

This letter is not a building permit and does not authorize any other site activity or work. The performance guarantee and all permits must be secured prior to any other work being performed on site.

Should you have any questions concerning this letter please call either myself or Phil DiPierro, Development Review Coordinator.

Sincerely,

Alexander Jaegerman
Planning Division Director

Re: Bayside Village Student Housing, LLC

To Whom It May Concern:

KeyBank National Association (hereinafter called the "Bank") has committed to make a loan to Bayside Village Student Housing in the amount of $20,825,000 for the acquisition of land located at 120 Marginal Way in Portland, Maine and construction of 100 fully furnished 4-bedroom suite-style units of student housing, a 102-space parking garage and approximately 3,600 square feet of retail space on terms and conditions set forth in our commitment letter which has been issued and accepted.

We anticipate an initial closing by the end of this month.

We have successfully completed a variety of projects with Joseph Cloutier, the principal, and look forward to participating in this project.

Sincerely,

W. Scott Fox,

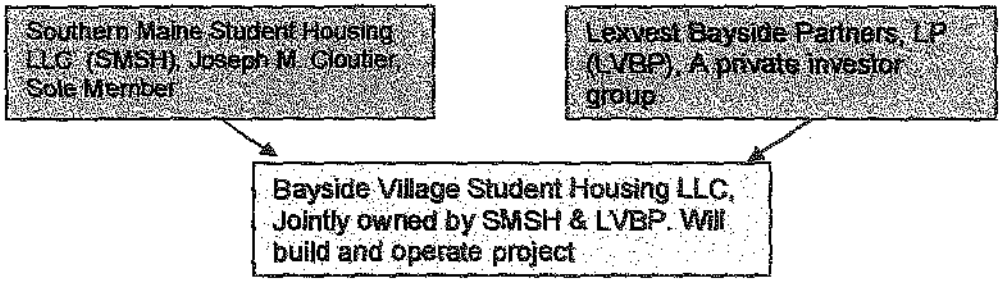
Re: Bayside Village Student Housing Project

Dear Richard,

I am writing in my capacity as financial advisor to Joseph M. Cloutier and Southern Maine Student Housing LLC.

I understand that your office has requested an explanation of the need to amend the various City approvals for Southern Maine Student Housing LLC (SMSH)to a new entity named Bayside Village Student Housing LLC. (BVSH)

Bayside Village Student Housing LLC is the new entity formed by the joint investment into the project by Joseph Cloutier's development entity Southern Maine Student Housing LLC (the current property owner of record) and the outside investor group headed by Lexvest Bayside Partners LP, a Lexington, Massachusetts based private investment group. Together their capital is providing funding for the project and they will own the project under the BVSH entity. See diagram below:



The necessity of this arrangement is to properly and legally facilitate all joint venture arrangements, including but not limited to bank borrowing, construction contracts, management of the property and ongoing operations after construction is completed.

If there are any questions you or your staff have regarding this arrangement and its necessity please contact me immediately.

Thank you for your ongoing support for this important project in Portland.

Sincerely,

Peter G. Moore
Managing Director

RE: Bayside Village A Student Housing Complex
Conditions of Diminimus Change Approval

Dear Rick:

In accordance with the City approval letter, dated March 27, 2008, for the diminimus change request for the proposed air cooled chiller, we have prepared the enclosed Exhibit A, dated June 9, 2008. In accordance with the approval letter, we have provided additional plantings in front of the proposed fence. We have added three (3) Wichita Blue Juniper (upright) and seven (7) Bearberry (ground cover) to supplement the original proposed Red Maple. We trust that these additional plantings will address the condition of approval.

The general contractor needs to provide the landscape contractor with a list of additional material as soon as possible. Once Jeff Tarling has reviewed the proposed planting, please notify us so that we may notify the general contractor.

Should you have any questions, please do not hesitate to call me.

Sincerely,
Mitchell & Associates

Robert B. Metcalf

Re: Bayside Village Chiller Acoustical Calculations

Dear Ms. Martin:

The following is a report of my acoustical evaluation of the impact of the new chiller for the Bayside Village Project on the neighboring residential zone.

As well as my calculations, I personally visited the site with you from 11:00 AM to 12:00 PM on Wednesday, December 5, 2008 to observe the site conditions and determine if there were any extenuating circumstances that might affect these calculations.

Proposed Equipment:

After reviewing the chiller submittal I noted that a rotary screw compressor was selected for this project. This is much preferable to a reciprocating compressor chiller for noise criteria. Also, it was marked that a low sound package was being utilized.

> The Portland Noise Ordinance states:
>
> "In addition to the sound level standards established above, all uses located within this zone shall employ best practicable sound abatement techniques to prevent tonal sounds and impulse sounds or, if such tonal and impulse sound cannot be prevented, to minimize the impact of such sounds in residential zones."

I believe that these selections meet the requirements of employing the "best practicable sound abatement techniques".

Existing Conditions:

The chiller is to be located outside near the I295 roadway and essentially behind the line of two large buildings but aligned with an open driveway between. Across the adjacent Marginal Way is a parking area with a metal working yard adjacent. At the end of the parking lot is a broken line of evergreen trees. Another block further is a row of two story buildings. On the next block is a row of three story buildings with discontinuous 4th story mechanical penthouses above. Finally, across Lancaster Avenue, 1270 feet away, is the closet residential development.

Sound pressure level (SPL) measurements at the edge of the parking lot nearest the trees was 62 dBA at 11:30 AM. Measurements at the edge of the Residential area were never measured at less than 52 dBA at 11:55 AM. The source of these sounds were primarily traffic noise, much of which will diminish in frequency of occurrence during later hours when traffic volume decreases, but not in overall loudness.

Calculations:

See attached sheet. The first calculation is a worst case, first order approximation based solely on distance. Under these conditions, SPL decreases 6 dB for each doubling of distance. Because the chiller is located on the ground and not suspended in free air, all of the sound radiates into one hemisphere, increasing the SPL in that direction by 6 dB. I am assuming, with substantial areas of pavement, a worst case scenario that the reflection is 100% although in reality some fraction of the sound would be absorbed by the soil covered areas. This would likely reduce the SPL by 1 or 2 dB. With this simple calculation, the predicted SPL is 46.9 dBA easily meeting the <50dBA requirement of the Ordinance.

The second calculation is a more rigorous analysis by octave band including the loss due to direct attenuation by the atmosphere. I am again figuring the worst case scenario of a hot humid day when the air is thinner and has less absorption.

Other factors such as the obstruction by two rows of buildings would further attenuate the sound but because the buildings are much more than a quarter of the distance towards the residential zone the calculations are non trivial and for the purposes of this analysis are not necessary. The resulting predicted SPL can be no more than 43.5 dBA and most likely would be 10 dB lower than that if all other factors were included. The resulting predicted 43.5 dBA is at least 6.5 dB below the allowed maximum hence providing a significant safety factor.

Verification:

The only possible method to measure the actual chiller SPL in the residential zone would be to wait for a dead calm night with absolutely no wind and minimal traffic on I295 and in the city. The chiller would have to be turned on and off to verify the source of the noise with a corresponding increase and decrease of SPL reading on the sound level meter. Because of the multiple sources of noise in the range of 50 dBA or more and an expected real SPL of less than 35 dB for the chiller, any attempted measurement will very likely be overwhelmed by ambient background noise.

Recommendations:

The acoustical fence around the chiller is unnecessary for this project. As demonstrated in the preceding calculations, the project easily meets the requirements of the ordinance without an enclosure. In order for an acoustical fence to be effective, it would need to be 3 to 4 feet higher than the 9' chiller package and spaced relatively close to the chiller. This potentially jeopardizes the chiller operation and definitely increases energy consumption because of possible short circuiting of ventilation exhaust air with the intake to the condensing coils. With the optional low sound package included, the chiller enclosure itself acts as a fence, effectively blocking more sound than a fence.

If you have further questions please feel free to call me at (207) 276-5350.

Sincerely,

Dwight M. Lanpher, P.E.

Acoustical Qualifications for Dwight M. Lanpher, P.E.:

B.S. Electrical Engineering University of Maine at Orono 1977

Specific acoustical coursework completed:

EE31	Elements of Communications Instructor: Dr. Waldo M. Libbey
EE190	Senior Project: 1/3 Octave Band Acoustical Analyzer Instructor: Dr. E.M. Fields
EE196	Electro Acoustics Instructor: Dr. Waldo M. Libbey
EE197	Environmental Noise Control Instructor: Dr. Waldo M. Libbey

Instructor for OSHA noise training at Jackson Laboratory 1979-1984
in cooperation with Laboratory Safety Officer Arden Peach

Certified Professional Engineer, State of Maine 1986

Test Equipment:

The following test equipment are owned by Dwight M. Lanpher. All units have been factory calibrated with equipment with calibration traceable to the National Bureau of Standards. All equipment is recalibrated at a certified laboratory within twelve months prior of readings.

Sound Level Meter: Quest Model 215, Serial Number M8100013
Meets ANSI standard S1.4-1983 for type 2 Sound level meters
and IEC-651 type II standards.

Octave Band Analyzer: Quest Model OB45, Serial Number N8090038
Meets ANSI standard S1.11-1971 for type II octave band units.

Peak Hold Meter: Quest Model PH-35, Serial Number P9100003
Meets ANSI standard S1.4-1983 for type II peak hold meters.
IEC impact response position meets IEC 651 specifications.

Calibrator: Quest Model CA-12B, Serial Number U8100069
Meets ANSI S1.40-1984. 110 dB fixed level.

Weather Measurement:

Weather temperature and humidity data is taken with a Bacharach sling psychrometer.
Air Pressure is measured with a Thommen 27,000' Altimeter calibrated daily against a mercury column barometer.

Subject: student housing

Bob, Thanks for the updated info on the student housing projecy received yesterday. We"l review this material at tomorrows staff meeting. Could you tell the dimensions and height of the "pak-trainer" verrsus the size of the previous trash compactor? Does this change the dimensions of the enclosure? Thanks.

RE: Bayside Village A Student Housing Complex
Diminimus Change Request

Dear Rick,

The following request is being made to address changes in the roof deck garden design that we discussed on May 2, 2008 and a change in pavement material for the sidewalk between Bayside Village and 84 Marginal Way and between Bayside Village and Miss Portland Diner. As we discussed, there is a significant cost factor associated with the construction of the roof deck as designed and approved. We are proposing the following changes to the roof deck that we believe do not impact the integrity of the design:

- Reduced the number of shrub planter boxes from 8 to 6. A total reduction of 2 shrub planter boxes.
- Reduced the number of tree planter boxes from 10 to 9. A total reduction of 1 tree planter box.
- Reduced the number of shrubs from 74 to 62. A total reduction of 12 shrubs.
- Reduced the number of trees from 14 to 13. A total reduction of 1 tree.
- Reduced the number of herbaceous plant material from 2029 to 2003. A total reduction of 26 herbaceous plants (included change in species).
- Eliminated a small planting bed (56 SF) and replaced with pavers.

We are also requesting a change in sidewalk paving material for the on-site sidewalk between Bayside Village Student Housing and 84 Marginal Way (Intermed) from concrete to bituminous concrete. The sidewalk for 84 Marginal Way from the Preble Street Extension that connects to the Bayside sidewalk was approved as bituminous.

The other pavement change request is for the on-site brick sidewalk, which runs along the Miss Portland Diner side of the site to bituminous concrete. The proposed sidewalk on the Miss Portland side of the access drive is bituminous.

We have provided the enclosed plan defining the areas of change. The proposed changes are being requested to address significant cost factors associated with the project. We do not believe that these changes have a negative impact on the design of the project and are consistent with adjacent development currently under construction.

Should you have any questions, please do not hesitate to call me.

Sincerely,
Mitchell & Associates

RE: Bayside Village A Student Housing Complex
Conditions of Diminimus Change Approval

Dear Rick:

In accordance with the City approval letter, dated March 27, 2008, for the diminimus change request for the proposed air cooled chiller, we have prepared the enclosed Exhibit A, dated June 9, 2008. In accordance with the approval letter, we have provided additional plantings in front of the proposed fence. We have added three (3) Wichita Blue Juniper (upright) and seven (7) Bearberry (ground cover) to supplement the original proposed Red Maple. We trust that these additional plantings will address the condition of approval.

The general contractor needs to provide the landscape contractor with a list of additional material as soon as possible. Once Jeff Tarling has reviewed the proposed planting, please notify us so that we may notify the general contractor.

Should you have any questions, please do not hesitate to call me.

Ralph, Attached are comments from Mike Farmer of Public Works regarding the traffic improvements for Bayside Village. Previously you received comments from Tom Errico.

The plans should show a handicap ramp on the easterly (northerly side) of the Bayside Village/Miss Portland Diner common driveway since there will be a crosswalk across Marginal Way as well as the westerly side of the driveway.

I am awaiting further input from Tom and Jim on the striping of the crosswalk across Marginal Way which I wil forward to you when I receive those comments.

Should you have any questions please feel free to contact me.

>>> Michael Farmer Wednesday, December 19, 2007 >>>
I have the following comments based on the plans revised as of Nov. 30, 2007.

The City's minimum requirements for pavement structure in a street of this classification include the following.
2" thickness of surface course asphalt pavement
3" thickness of base course asphalt pavement
3" thickness of aggregate base course crushed gravel (Type A)
18" thickness of aggregate subbasae course gravel (Type D)
The total thickness of new pavement should equal the greater of the existing pavement depth or 5 inches.

Bob, At Wednesday's staff review meeting we discussed the dumpster/compactor issue. After looking at the plan there isn't any enthusiasm among staff for a dumpster enclosure on city owned land and its location at the terminus of Chestnut Street. I appreciate the fact that this use will generate alot of waste but this solution doesn't have any support.

I don't know what to say other than to seek another alternative. Perhaps may be a smaller trash (low tech) hauler out there that does not have as sophisticated equiptment as larger haulers that could accommodate their needs. I suppose if the applicant doesn't like staff's answer on the revision this could be referred to the planning board. Someone from City whether it be the City Manager's Office or the City Council will presumably need to approve a license for the dumpster on City land.

Bob, Since our meeting with J.Cloutier last week I have not talked to Alex about the dumpster enclosure. One comment at the meeting was whether the dumpster could be pushed closer to or into the building. The
enclosure intrudes 4 feet into the driveway right of way. Can it be reduced further?

The other issue discussed at the meeting was the material of the dumpster doorway. Wood fence doors typically get smashed by the trash truck. J. Cloutier suggested a metal frame gate with plastic slats. I suspect the same thing will probably happen. Another alternative would be a custom metal gate that has a creative design to it that would be sturdier and improve the aesthetics of the situation.

This all goes back to the fact there is an intrusion of the enclosure onto city land and so the intrusion should either disappear and if not possible mitigate the physical appearance of it. The design of the gate

Bob, We discussed the dumpster enclosure for the student housing project at todays staff meeting. There is no support for approving a plan that has the dumpster or dumpster enclosure on city property. We will not be able to approve that site revision.

I signed off on the student housing project this morning so that a permit can be issued. Don't know if it can be issued today because of limited staff today. Monday a better bet. There are a bunch of conditions on my sign-off related to the planning board conditions of approval.

On another note I hope you have a Happy Thanksgiving.

Bob, This email lists all the conditions of approval from Planning that were communicated to the Building Inspection Office that will be going on the building permit. Obviously a few details to follow-up on.

1. The dumpster recycling addition has not been approved. Subject to Planning Division review and approval.

2. Air cooler chiller unit/electric generator etc. subject to review and approval by the Zoning Administrator regarding noise issues. Applicant shall submit appropriate noise information to the Zoning Administrator.

3. Signage plan shall be subject to Planning Division review and approval. The previously submited plan was not acceptable.

4. Applicant is subject to the requirements outlined in Tom Errico's memo dated 10-20-06. Roadway improvement plans shall be submitted to the Planing Division by 11-30-07 for review and approval by Tom Errico. A Travel Demand Management Plan shall be submitted to the Planning Division for review and approval prior to the issuance a Certificate of Occupancy.

5. Project is subject to the Planning Board approval letter for this project dated November 20, 2006 with 9 conditions of approval.

RE: Bayside Village; 120 Marginal Way
#2006-0125; CBL: 34A-B-1

Dear Bob,

This letter is to confirm that the Portland Planning Authority has reviewed and approved the relocation of a dumpster enclosure within the property lines of the Bayside Village development. The revision is described in a cover letter dated 12-24-07 and a plan dated 12-21-07. The approval is subject to the following conditions:

1. The dumpster enclosure exterior doors shall be closed at all times except for when the dumpster is removed or replaced.

2. The pavement in front of the dumpster enclosure is concrete. If a license from the City is required, the applicant shall submit a license request to the City.

3. The driveway width in front of the dumpster shall be a minimum of 24 feet wide.

Should you have any questions concerning this letter, please call Rick Knowland at 874-8725.

Sincerely,

RE: Bayside Village A Student Housing Complex
Diminimus Change Request

Dear Rick,

We have revisited options to address the design and location of the proposed trash enclosure and have prepared the attached exhibits for your review. The enclosure area has been redesigned to be entirely within the boundary of the student housing parcel. The enclosure extends eight (8) feet from the face of the main structure. The access gate will be parallel with the façade of the building and not visible from Marginal Way. Structural changes were made to permit the trash and recycling area to extend into the garage. The enclosure will be constructed of the same masonry block used in the main building. The gate will be wood clad to conceal the unit from the Miss Portland Dinner site. Recycling units will be contained within an enclosure in the garage with access from the exterior for removal. The contractor needs direction as soon as possible as they are nearing that end of the structure,

Should you have any questions, please do not hesitate to call me.

Sincerely,
Mitchell & Associates

Subject: 84 marginal way-bayside village comments

Tom and Jim, I forwarded the Marginal Way improvement plan (84 marginal way and bayside village) to G-P today and said that further comments from engineering and myself would be forwarded shortly. I do have a few questions that I'd be interested in your feedback on which I can pose to G-P depending on your thoughts on the matter.

1. What type of pedestrian crosswalk striping are they proposing at the Marginal Way-Preble Street intersection? In the Marginal Way Master Plan (August 18, 2006) I see a heavy duty very wide crosswalk (not unlike the one on the famous Beatle's album cover) with large painted blocks. My vote would be for a wide one. We are trying to create a safe pedestrian environment but despite our best efforts the crossing distances will still be a challenge for many pedestrians. I would also beef up the pedestrian crossing striping for the crosswalk by Hannaford's and the crosswalks on Marginal Way by Chestnut Street.

2. And the one last question (I've asked Tom this numerous times and I can't let go). The radius on the corner of Marginal Way and Preble Street by 84 Marginal Way seems larger than the radii on the other corners? Can it be reduced?

Thanks for your thoughts on these questions.

Subject: Fwd: 84 Marginal Way project - Street improvement plans by Gorrill Palmer

Ralph, I am forwarding comments from Mike Farmer of Public Works regarding 84 Marginal Way. I have posed some questions to Tom Errico and Jim Carmody regarding striping of cross walks and one other issue which I hope to receive input on soon so these are not definitive comments yet.

>>> Michael Farmer Wednesday, December 19, 2007 >>>
I am submitting the following comments regarding the recently submitted street improvement plans.

1. The typical pavement structure cross sections on sheet 2 should be consistent with City standards. The City's minimum requirements for pavement structure in a street of this classification include the following.
2" thickness of surface course asphalt pavement
3" thickness of base course asphalt pavement
3" thickness of aggregate base course crushed gravel (Type A)
18" thickness of aggregate subbasae course gravel (Type D)
The total thickness of new pavement should equal the greater of the existing pavement depth or 5 inches.

2.The City sidewalk materials policy calls for concrete sidewalks on Preble Street extension and Brick on Marginal Way. One of the cross sections in the plans shows an asphalt pavement sidewalk. I question whether or not Asphalt sidewalks have been approved anywhere on this project.

3.The raised concrete island detail calls for a concrete thickness of 4"-8". What thicknesses apply to what areas on the plans? I could not find any notes on the plans stating where the 4" concrete depth would be used, where the 8" depth would be used, and where any depth between 4" and 8" would be used. I think 8" is fine. I question whether 4", or anything less than 8" is acceptable.

4. Should the concrete in the medians be Class LP? Should the reinforcing be epoxy coated?

5. The granite curb layout should show that the granite curbing continues across the bottoms of the sidewalk ramps.

6. Curb section 153-154 should be at least 4 feet long since the City does not generally accept individual granite curb pieces shorter than 4 feet.

7. Note 12, sheet 3 should state that traffic control plans are subject to review and approval by the City Transportation Engineer.

8. Note 15 (sheet 3, I recall) does not allow two way traffic. I question whether this note should be changed. Generally, the City wants two-way traffic. What we do not want are lane closures.

9. Should note 35 be changed to say that truncated dome pavers are required to contrast in color compared to the standard sidewalk brick. In other words, do we want red brick sidewalk next to red truncated dome pavers?

10. On sheet 6, the depth of the concrete island(s) should be stated.

Tom, Thank you for the update. In order to save time could copies of the plan be delivered to Tom Errico and Jim Carmody directly? I'll need 4 additional copies also. Thanks and have a great Thanksgiving.

Hi Rick:

Bob Metcalf requested that we provide you an estimated schedule for submitting the review plans for the offsite improvements for 84 Marginal Way as well as Bayside. The review plans for 84 Marginal Way offsites will be submitted to your office sometime on Monday the 26th. The plans for the Bayside offsites will be submitted to your office by next Friday the 30th.

Hi Tom,

I just spoke with Rick Knowland and he requested that an email from you documenting the schedule to submit the plans for the road improvements. He also asked about 84 Marginal and I indicated yopu were looking at either this week or next week to submit their plans as well. Would you provide Rick with an email for his files and so that he can discuss this at staff meeting tomorrow.

Subject: Bayside Village - Roadway Improvement Plan

Rick -

The following summarizes my initial comments related to a review of the Gorrill-Palmer Consulting Engineering, Inc. plans transmitted on December 4, 2007. Please note that my review focused on traffic engineering items.

1. Note 15 on Sheet 2 should indicate that construction cannot begin until the traffic control plan has been reviewed and approved by the City of Portland.
2. Note 19 should include accordance with City of Portland standards.
3. The typical sections on Sheet 3 should be revised to note a minimum bicycle lane width of 5 feet.
4. The applicant shall provide backup traffic information that supports the length of the two lanes from Preble Street towards Chestnut Street, before tapering to one lane.
5. The traffic and parking divisions should review and approve the sign types and conformance with City standards, particularly signs 16 and 17.
6. The applicant should provide the width dimension at the beginning of the two-way left turn lane near station 15+50.
7. The crosswalk at Chestnut Street is proposed as two parallel lines. The City should confirm that a higher level of design is not warranted.
8. Sign 14 for westbound motorists should be located a close to the proposed crosswalk as possible.
9. If there is a future possibility of a crosswalk on Marginal Way east of Chestnut Street, I would suggest that the handicapped ramp design be modified for this future condition.
10. In areas where the shoulder width is substantial, the City has provided an additional painted line to distinguish the bicycle lane (an example is Auburn Street). The City should provide guidance use of this layout for this project.
11. On Marginal Way in the westbound direction, two lanes transition to one within the project limits. The plans should include the appropriate pavement marking and signage changes to account for the transition.
12. On Marginal Way in the eastbound direction, the transition to existing roadway lane, shoulder, and bicycle lane has not been accounted for. The plans should be revised to ensure the proposed changes match existing conditions east of the improvement area.

If you have any questions, please contact me.

Re: Bayside Village Student Housing Complex, 132 Marginal Way, Portland, ME

Dear Rick:

This letter represents a follow-up to your job site visits were we reviewed the metal panel revisions at the Bayside Village Project. The following items are revisions to the original approval by the Planning Board on November 14, 2006:

1) Glass Fiber Reinforced Concrete (GFRC) Parapets and Accent Band. During the approval process with the City, GFRC was approved for the parapets and accent band around the building. During the design review process of the building it was discovered that GFRC is not a valid product for a wood building application. Prefabricated GFRC should be anchored to structural steel and not wood. Therefore, the design team went back to the original plan of metal panels (as shown on the rendering drawing attached for your use) for the parapets and accent band around the building. The product being used is the same material as the silver metallic Firestone Una-Clad UC-501 vertical oriented metal siding wall panels in the courtyard, except bent at a different profile. Attached for your use is the cut sheet on the UC-501 panel system and two elevations showing the dimensions of the parapet and accent band layout. Please note that the panels will only be approximately 20" wide in order to minimize the chance of any "oil canning." The original rendering showed metal panels approximately 40" wide.

2) Citadel ProCore Prefinished Architectural Panels. The ProCore panel that was approved by the City was a two-piece reveal molding system shown on the attached detail 1B System Isometric, Option 2. The ProCore panel that we are looking to install at the Bayside project is a two-piece extruded molding system shown on the attached detail 1A System Isometric, Option 1. The extruded molding system was ordered and delivered to the jobsite instead of the approved reveal molding. The issue we have is the moldings have a custom coating on them, and it will take seven to eight weeks for the new moldings. With this fast track project this delay would be detrimental to finishing on time. The panels between the moldings are the same. The only difference is the moldings that surround each panel. The reveal molding (option 2) has a ½" gap in the cover plate, while the extruded molding (option 1) has a flat cover plate. The rest of the metal siding systems around the perimeter of the building all have flat moldings which would match option 1. Both moldings cost the same, have the same finish, have the same performance, and have the same warranty. The original reveal molding has the possibility of collecting debris and insects in the ½" gap where the extruded molding system is a flat cover plate.

131 Presumpscot Street, Portland, ME 04103
207-874-2323 www.pizzagalli.com

The project next door (84 Marginal Way) is also using the same extruded moldings on their approved panels as we are proposing for Bayside. This would give both adjacent buildings the same look.

Both of the above items are time sensitive, and we would appreciate anything the City can do to approve the proposed materials by Tuesday May 20, 2008. Thank you for your help in finalizing the metal panel system for the Bayside Village Student Housing Project.

Sincerely,
Pizzagalli Construction Company

MEMORANDUM

TO: Rick Knowland

FROM: Bob Metcalf

DATE: October 21, 2008

RE: Bayside Village Student Housing

Rick,

Enclosed are two copies of an executed license agreement for the roadway lighting on Marginal Way in front of Bayside Village Student Housing. The Owner has signed the license agreement. If you have any questions, please do not hesitate to call me.

cc Terry Turner

LICENSE AGREEMENT

FOR VALUABLE CONSIDERATION, the receipt and sufficiency of which is hereby acknowledged, the CITY OF PORTLAND, a Maine body corporate and politic, with a mailing address of City Hall, 389 Congress Street, Portland, Maine 04101 (the "City"), hereby GRANTS to Bayside Village Student Housing LLC, a Maine limited liability company with a place of business in Portland, Maine and mailing address c/o Bayside Village Student Housing LLC, 247 Commercial Street, Suite A, Rockport, Maine 04856 (hereinafter the "Licensee"), a revocable license to occupy portions of land owned by the City on or near Marginal Way in Portland, Cumberland County, Maine, which City land abuts the property of Licensee described in deeds from the City dated January 30, 2007 and recorded in the Cumberland County Registry of Deeds in Book 24806, Page 230 ("Licensee's Property"), the foregoing license being for the purpose of allowing encroachments on or over the City's land by the placement, within the City's right-of-way, of street lights owned and powered by Licensee, more particularly described and depicted on **Exhibit A** attached hereto and made a part hereof. The license granted in this license agreement is subject to the following conditions:

1. Licensee, its successors and assigns shall indemnify the City, its officers, agents, and employees from any and all claims which arise out of its use, or the use of others, of the City's land pursuant to this license agreement.

2. Licensee shall procure and maintain liability insurance in an amount of not less than Four Hundred Thousand Dollars ($400,000) combined single limit, covering claims for bodily injury, death and property damage and shall either name the City as an additional insured with respect to such coverage or shall obtain a contractual liability endorsement covering the obligations of Licensee under the terms of this license agreement.

3. This license agreement is assignable to any subsequent owners of Licensee's Property.

4. This license agreement may be revoked upon six (6) months written notice by the City.

IN WITNESS WHEREOF, the parties have caused this license agreement to be executed this ___ day of October, 2008.

CITY OF PORTLAND, MAINE
PLANNING BOARD

November 20, 2006

Mr. Ed Marsh
Realty Resources (Southern Maine Student Housing, LLC)
247 Commercial Street
Rockport, Maine 04856

RE: Bayside Village Student Housing; Southern Maine Student Housing, LLC, (Applicant); 120 Marginal Way; #2006-0125; CBL- 034A-B-001

Dear Mr. Marsh:

The Planning Board considered the proposal by Southern Maine Student Housing, LLC to create a 400 bed student lodging house in the vicinity of 120 Marginal Way and voted on the motions described in this letter.

On October 10, 2006, the Planning Board voted 5-0 (Hall and Tevanian absent) that the Bayside Village housing development was in conformance with the Conditional Use (parking garage) Standards of the Land Use Code.

On November 14, 2006, the Planning Board voted 5-2 (Silk and Tevanian opposed) that the Bayside Village housing development was in conformance with the Site Plan Ordinance of the Land Use Code, including Traffic Movement Permit. The approval was granted for this project with the following conditions:

i. That the Applicant shall revise the plan and implement the recommendations contained in Tom Errico's (Traffic Review Consultant) memo dated October 20, 2006, except that the Applicant shall not be required to operate a car-share program.

ii. The Applicant shall contribute $90,000 towards a Transportation Demand Management Fund to be established by the City of Portland to implement Transportation Demand Management measures in Bayside. The parking monitoring study of the site, which will be performed by the Applicant as noted in Mr. Errico's memo, will be used to guide the use of those funds. For the purposes of conducting the monitoring study full occupancy shall be considered 90% of the beds.

iii. That the pedestrian easement for the easterly side of the building shall be submitted for City staff review and approval.

iv. That all exterior signs shall be subject to Planning staff review and approval.

v. That the project lighting shall be subject to Planning staff review and approval.

vi. That final details and materials of the building façade shall be subject to Planning staff review and approval.

vii. In the event that the project changes from student housing as presented by the Applicant to another use, the Applicant shall submit such changes to the Planning Board for review and approval.

viii. The project is approved for a maximum of 400 beds with one occupant per bed.

iv. Applicant shall provide a binding lease agreement for off-hours parking at 84 Marginal Way.

The approval is based on the submitted site plan and the findings related to site plan and conditional use review standards as contained in Planning Report 52-06 and Planning staff memo dated for November 14,2006.

Please note the following provisions and requirements for all site plan approvals:

1. Where submission drawings are available in electronic form, the Applicant shall submit any available electronic Autocad files (*.dwg), release 14 or greater, with seven (7) seta of the final plans.

2. A performance guarantee covering the site improvements as well as an inspection fee payment of 2.0% of the guarantee amount and 7 final sets of plans must be submitted to and approved by the Planning Division and Public Works prior to the release of the building permit. If you need to make any modifications to the approved site plan, you must submit a revised site plan for staff review and approval.

3. The site plan approval will be deemed to have expired unless work in the development has commenced within one (1) year of the approval or within a time period agreed upon in writing by the City and the applicant. Requests to extend approvals must be received before the expiration date.

4. A defect guarantee, consisting of 10% of the performance guarantee, must be posted before the performance guarantee will be released.

5. Prior to construction, a pre-construction meeting shall be held at the project site with the contractor, development review coordinator, Public Work's representative and owner to review the construction schedule and critical aspects of the site work. At that time, the site/building contractor shall provide three (3) copies of a detailed construction schedule to the attending City representatives. It shall be the contractor's responsibility to arrange a mutually agreeable time for the pre-construction meeting.

6. If work will occur within the public right-of-way such as utilities, curb, sidewalk and driveway construction, a street opening permit(s) is required for your site. Please contact Carol Merritt at 874-8300, ext. 8828. (Only excavators licensed by the City of Portland are eligible.)

The Development Review Coordinator must be notified five (5) working days prior to date required for final site inspection. The Development Review Coordinator can be reached at the Planning Division at 874-8632. Please make allowances for completion of site plan requirements determined to be incomplete or defective during the inspection. This is essential as all site plan requirements must be completed and approved by the Development Review Coordinator prior to issuance of a Certificate of Occupancy. Please schedule any property closing with these requirements in mind.

If there are any questions, please contact Richard Knowland at 874-8725.

Sincerely,

Kevin Beal, Chair
Portland Planning Board

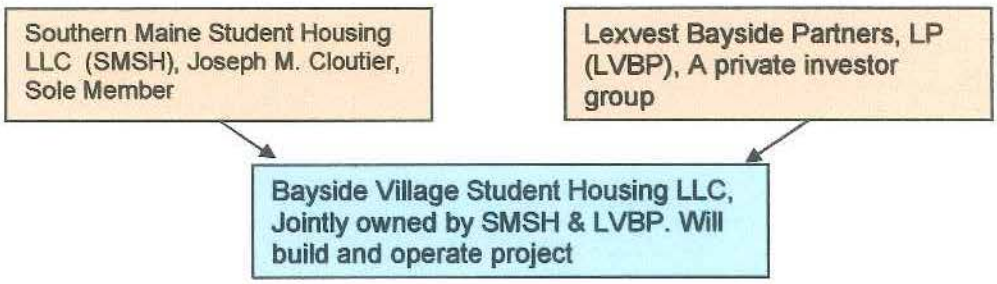
Re: Bayside Village Student Housing Project

Dear Richard,

I am writing in my capacity as financial advisor to Joseph M. Cloutier and Southern Maine Student Housing LLC.

I understand that your office has requested an explanation of the need to amend the various City approvals for Southern Maine Student Housing LLC (SMSH)to a new entity named Bayside Village Student Housing LLC. (BVSH)

Bayside Village Student Housing LLC is the new entity formed by the joint investment into the project by Joseph Cloutier's development entity Southern Maine Student Housing LLC (the current property owner of record) and the outside investor group headed by Lexvest Bayside Partners LP, a Lexington, Massachusetts based private investment group. Together their capital is providing funding for the project and they will own the project under the BVSH entity. See diagram below:



The necessity of this arrangement is to properly and legally facilitate all joint venture arrangements, including but not limited to bank borrowing, construction contracts, management of the property and ongoing operations after construction is completed.

If there are any questions you or your staff have regarding this arrangement and its necessity please contact me immediately.

Thank you for your ongoing support for this important project in Portland.

Sincerely,

Peter G. Moore
Managing Director

Re: Bayside Village Student Housing, LLC

To Whom It May Concern:

KeyBank National Association (hereinafter called the "Bank") has committed to make a loan to Bayside Village Student Housing in the amount of $20,825,000 for the acquisition of land located at 120 Marginal Way in Portland, Maine and construction of 100 fully furnished 4-bedroom suite-style units of student housing, a 102-space parking garage and approximately 3,600 square feet of retail space on terms and conditions set forth in our commitment letter which has been issued and accepted.

We anticipate an initial closing by the end of this month.

We have successfully completed a variety of projects with Joseph Cloutier, the principal, and look forward to participating in this project.

Sincerely,

W. Scott Fox,

Re: Bayside Village Student Housing; 120 Marginal Way; #2006-0125; CBL-034A-B-001

Dear Mr. Ketterer,

This letter is to confirm that the Portland Planning Authority has received a letter from Peter Moore of Corporate Finance Associates (dated June 25, 2007) regarding a change in the developer entity for the Bayside Village Student housing project from Southern Maine Student Housing LLC to Bayside Village Student Housing LLC. A letter has also been received from W. Scott Fox of Key Bank (dated June 18, 2007) regarding the financial capacity of Bayside Village Student Housing LLC.

The above information has been reviewed and found to be acceptable.

Should you have any questions concerning this letter please feel free to call me.

Sincerely,

Alex Jaegerman
Planning Division Director

RICK KNOWLAND

along the Marginal Way curb line.
No further comment.

5. The City does not mark parking stalls. The site plan should be modified accordingly.
No further comment.

6. A flush concrete surface currently exists on Marginal Way in the vicinity of the project. I would suggest that it be removed.
The Gorrill-Palmer plans require removal of the concrete.

7. The dimensions on the site plan for the Marginal Way cross-section and those depicted on a conceptual plan included in the traffic study are different. The plans should be consistent.
The plans are acceptable although as noted above, some adjustment may be necessary as we proceed to final design.

8. It is unclear on what is being proposed by this project for physical improvements to Marginal Way and along Preble Street.
No further comment.

9. A crosswalk should be provided across Marginal Way on the west side of Chestnut Street. This will require an ADA compliant HC ramp.
The applicant has included a crosswalk at this location.

Parking

In an effort to better quantify parking needs, I suggested that the applicant conduct a parking survey at the existing Portland Hall Dormitory located on Congress Street in downtown Portland. Portland Hall was surveyed for each hour on Thursday September 28, 2006 between 6:00am and 7:00pm. According to the survey, the peak parking demand occurred between 7:00am and 8:00am, where 87 vehicles were parked. Based upon a housing demand of 300 students, Portland Hall experiences a parking demand of 0.29 parking spaces per student. Follow-up surveys were conducted in October and indicted 97 cars were parked (0.32 spaces per bed). Some noteworthy information obtained in a telephone conversation with Alisha Menard, the manager of the facility, includes:

- Approximately 130 parking spaces are provided on-site. Approximately 120 spaces are dedicated to students with the remaining assigned to staff and handicapped drivers.
- A waiting list for an on-site parking space is approximately 35.
- The occupants are students from several area schools.
- Parking spaces cost $125.00 per semester.
- For students that do not receive on site parking, they are eligible for City of Portland resident parking permits. Staff provides a letter to the City documenting resident status of students.
- Shuttle bus service is provided between Portland Hall and the Portland campus every ½ hour.
- The issuance of permits is based upon returning students and a lottery system.
- Weekend parking demand is lower than weekday conditions.
- Summer time periods have significantly lower parking demands as compared to typical school periods.
- It was not totally clear why the parking lot was not full during the survey period when considering a waiting list for parking permits. Alisha noted that the characteristics of tenants are such that: some have unusual work schedules; some pay for a parking permit but don't utilize

6. Radii at the Marginal Way/Preble Street intersection should be minimized as much as possible.
7. The left-turn entry into 84 Marginal Way off Preble Street may need to be modified to account for City maintenance requirements. Additionally, it is suggested that the 12-foot lane be reduced to 11-feet and a two foot concrete rumble strip be provided to separate left-turn movements into the site from northbound Preble Street traffic.
8. The painted transition area in advance of the left-turn lane into 84 Marginal Way should be a stamped material to be determined during the design process.

- The applicant shall be responsible for the implementation of a new crosswalk with supplemental features on Preble Street as illustrated on Conceptual Roadway Improvement Plan E prepared by Gorrill-Palmer Consulting Engineers, Inc. included in their October 4, 2006 submission. I would note that the plan will need to be modified such that bicycle lanes can be provided in the area of roadway widening for the raised median island. I would note that this plan is for the stand alone implementation of the crosswalk. The design of the crosswalk will be significantly different as compared to plans being review for 84 Marginal Way. Both crosswalk designs are acceptable to the City, although some minor modifications may be necessary as the plans are further developed for construction.

- In an effort to offset traffic, bicycle, and pedestrian impacts to the Marginal Way corridor, the applicant shall contribute $43,500.00 towards the implementation of the Marginal Way Pedestrian and Bicycle Master Plan improvement concepts.

- In an effort to relieve traffic pressure to left-turn movements from Preble Street to eastbound Marginal Way the applicant shall contribute $9,000.00 towards the extension of Somerset Street. The City seeks implementation of Somerset Street as soon as possible to offer travel alternatives to Marginal Way.

Site Plan

The following presents an update to my September 8, 2006 comments.

1. The secondary driveway should be designed to be compatible with anticipated future conditions (right-turn entry/exit only).
   The plans have been revised and I find them acceptable. I would ask that the applicant install appropriate signage that reinforces turn restrictions. This should be coordinated with the City Traffic Engineer.

2. The applicant should provide documentation that METRO has reviewed the proposed plans for a bus stop and bus shelter and approve the location and design elements.
   No further comment.

3. The primary driveway entrance opposite Chestnut Street should be redesigned to allow for optimal approach capacity. Based upon future development opportunities, including the Miss Portland Diner and an AMTRAK Rail Station, it is suggested that two approach lanes be provided. The public right-of-way on this approach is 36 feet and it is my recommendation that this space consist of two 10-foot approach lanes, one 11-foot entry lane, and one 5-foot sidewalk.
   The plans have been revised to reflect this suggestion.

4. I would suggest that Eric Labelle closely review the plans as it relates to geometric modifications

6. Radii at the Marginal Way/Preble Street intersection should be minimized as much as possible.
7. The left-turn entry into 84 Marginal Way off Preble Street may need to be modified to account for City maintenance requirements. Additionally, it is suggested that the 12-foot lane be reduced to 11-feet and a two foot concrete rumble strip be provided to separate left-turn movements into the site from northbound Preble Street traffic.
8. The painted transition area in advance of the left-turn lane into 84 Marginal Way should be a stamped material to be determined during the design process.

- The applicant shall be responsible for the implementation of a new crosswalk with supplemental features on Preble Street as illustrated on Conceptual Roadway Improvement Plan E prepared by Gorrill-Palmer Consulting Engineers, Inc. included in their October 4, 2006 submission. I would note that the plan will need to be modified such that bicycle lanes can be provided in the area of roadway widening for the raised median island. I would note that this plan is for the stand alone implementation of the crosswalk. The design of the crosswalk will be significantly different as compared to plans being review for 84 Marginal Way. Both crosswalk designs are acceptable to the City, although some minor modifications may be necessary as the plans are further developed for construction.

No further comment.

9. A crosswalk should be provided across Marginal Way on the west side of Chestnut Street. This will require an ADA compliant HC ramp.
The applicant has included a crosswalk at this location.

Parking

In an effort to better quantify parking needs, I suggested that the applicant conduct a parking survey at the existing Portland Hall Dormitory located on Congress Street in downtown Portland. Portland Hall was surveyed for each hour on Thursday September 28, 2006 between 6:00am and 7:00pm. According to the survey, the peak parking demand occurred between 7:00am and 8:00am, where 87 vehicles were parked. Based upon a housing demand of 300 students, Portland Hall experiences a parking demand of 0.29 parking spaces per student. Follow-up surveys were conducted in October and indicted 97 cars were parked (0.32 spaces per bed). Some noteworthy information obtained in a telephone conversation with Alisha Menard, the manager of the facility, includes:

- Approximately 130 parking spaces are provided on-site. Approximately 120 spaces are dedicated to students with the remaining assigned to staff and handicapped drivers.
- A waiting list for an on-site parking space is approximately 35.
- The occupants are students from several area schools.
- Parking spaces cost $125.00 per semester.
- For students that do not receive on site parking, they are eligible for City of Portland resident parking permits. Staff provides a letter to the City documenting resident status of students.
- Shuttle bus service is provided between Portland Hall and the Portland campus every ½ hour.
- The issuance of permits is based upon returning students and a lottery system.
- Weekend parking demand is lower than weekday conditions.
- Summer time periods have significantly lower parking demands as compared to typical school periods.
- It was not totally clear why the parking lot was not full during the survey period when considering a waiting list for parking permits. Alisha noted that the characteristics of tenants are such that: some have unusual work schedules; some pay for a parking permit but don't utilize

the space every week; some may prefer to leave their car on-campus; Thursday's can have lower parking needs, because some students do not have Friday classes and leave early; and some pay for the space for comfort of availability for limited use.

Assuming Bayside Village functions similar to Portland Hall, 132 parking spaces should be provided (129 residential spaces and 3 retail employee spaces). It is recommended that the following be required of the applicant.

- **Provision of 132 parking spaces for tenants of the project (As an alternative, I would consider the creation of a TDM fund for the Bayside area that would require the applicant to make a financial contribution in lieu of providing the 30 off-site parking spaces. The fund would be used to implemented TDM measures and the City would be responsible for addressing parking deficits at the project site following the results of the monitoring study).**
- **During the first year, students housed in the project will not be allowed to obtain a Portland Resident Parking Permit. The applicant will operate a car-share program on-site such that parking demand is minimized. The details of the program (number of vehicles to be provided on-site) shall be coordinated with the City Traffic Engineer. The applicant may request modifications following results of the monitoring study.**
- **A parking monitoring program shall be performed with the following requirements:**
  - **The study shall be conducted 3 and 12 months after full occupancy of the building (or at times appropriate for a university housing project, subject to approval by the City). Subsequent studies may be required.**
  - **The study shall include a physical survey of parking facilities used by project tenants and a survey of residents about parking characteristics and needs shall be conducted. The details of the work shall be approved by the City Traffic Engineer.**
  - **If parking problems are identified, the applicant will be fully responsible for identification and implementation of necessary enhancements to mitigate parking problems.**
- **A Travel Demand Management (TDM) Program shall be implemented that may comprise of some of the above elements (e.g. car-share program), but may include a shuttle bus program and expanded METRO service. It is suggested that the details of the program be identified by the applicant and the program is subject to an annual review by the City.**
- **The applicant shall develop a management plan that addresses peak traffic and parking problems associated with student drop-off and pick-up at the beginning and end of the school year.**

If you have any questions or comments, please contact me.

Rick –

The following summarizes my comments and approval conditions for the above project.

Traffic Movement Permit

The proposed project meets requirements for the Traffic Movement Permit subject to the following conditions:

- The applicant shall be responsible for the implementation of roadway improvements along Marginal Way in the area of their site frontage as illustrated on Conceptual Roadway Improvement Plans B and C prepared by Gorrill-Palmer Consulting Engineers, Inc. included in their October 4, 2006 submission. I would note that the plans are conceptual in nature and some minor modifications (see comments in next bullet) may be necessary during the development of final design plans. I would like to note that the improvement plans include the removal of the flush concrete island in Marginal Way and the installation of a new crosswalk at the Chestnut Street intersection. Additionally, I would note that improvement plans provide acceptable conditions assuming the Bayside Village project proceeds independent of 84 Marginal Way and can be integrated with adjoining improvements on Marginal Way that may occur as part of 84 Marginal Way or other developments that may happen to the east.

- Some comments that will need to be addressed during the development of final design plans for Marginal Way and Preble Street improvements under the full implementation of improvements with both Bayside Village and 84 Marginal Way. These are **NOT** the responsibility of this applicant, but are necessary for improvements in the area that the applicant will be contributing financially:

    1. Lane widths on Preble Street southbound should not exceed 12 feet and the bicycle lane should be 5 feet. The curb on the westside of Preble Street will need to be relocated accordingly.
    2. The plans should note that the improvement plan will include all necessary lane assignment signs and traffic signal modifications.
    3. Pavement markings guiding the double left from Preble Street should be provided. Commentary on whether the turning area for this double left is different from current conditions.
    4. The plans indicate that a minor curb adjustment is required on the south side of Marginal Way near Wild Oats. I would suggest that the curb not be moved at this time (it seems wasteful to move it now and adjust it later as implementation of the master plan improvements take place) and the island width be reduced to allow for appropriate roadway receiving width.
    5. The plan should depict the lanes on all approaches such that we can confirm acceptable lane alignment can be provided through the intersection.

6. Radii at the Marginal Way/Preble Street intersection should be minimized as much as possible.
7. The left-turn entry into 84 Marginal Way off Preble Street may need to be modified to account for City maintenance requirements. Additionally, it is suggested that the 12-foot lane be reduced to 11-feet and a two foot concrete rumble strip be provided to separate left-turn movements into the site from northbound Preble Street traffic.
8. The painted transition area in advance of the left-turn lane into 84 Marginal Way should be a stamped material to be determined during the design process.

- The applicant shall be responsible for the implementation of a new crosswalk with supplemental features on Preble Street as illustrated on Conceptual Roadway Improvement Plan E prepared by Gorrill-Palmer Consulting Engineers, Inc. included in their October 4, 2006 submission. I would note that the plan will need to be modified such that bicycle lanes can be provided in the area of roadway widening for the raised median island. I would note that this plan is for the stand alone implementation of the crosswalk. The design of the crosswalk will be significantly different as compared to plans being review for 84 Marginal Way. Both crosswalk designs are acceptable to the City, although some minor modifications may be necessary as the plans are further developed for construction.

- In an effort to offset traffic, bicycle, and pedestrian impacts to the Marginal Way corridor, the applicant shall contribute $43,500.00 towards the implementation of the Marginal Way Pedestrian and Bicycle Master Plan improvement concepts.

- In an effort to relieve traffic pressure to left-turn movements from Preble Street to eastbound Marginal Way the applicant shall contribute $9,000.00 towards the extension of Somerset Street. The City seeks implementation of Somerset Street as soon as possible to offer travel alternatives to Marginal Way.

Site Plan

The following presents an update to my September 8, 2006 comments.

1. The secondary driveway should be designed to be compatible with anticipated future conditions (right-turn entry/exit only).
   The plans have been revised and I find them acceptable. I would ask that the applicant install appropriate signage that reinforces turn restrictions. This should be coordinated with the City Traffic Engineer.

2. The applicant should provide documentation that METRO has reviewed the proposed plans for a bus stop and bus shelter and approve the location and design elements.
   No further comment.

3. The primary driveway entrance opposite Chestnut Street should be redesigned to allow for optimal approach capacity. Based upon future development opportunities, including the Miss Portland Diner and an AMTRAK Rail Station, it is suggested that two approach lanes be provided. The public right-of-way on this approach is 36 feet and it is my recommendation that this space consist of two 10-foot approach lanes, one 11-foot entry lane, and one 5-foot sidewalk.
   The plans have been revised to reflect this suggestion.

4. I would suggest that Eric Labelle closely review the plans as it relates to geometric modifications

along the Marginal Way curb line.
No further comment.

5. The City does not mark parking stalls. The site plan should be modified accordingly.
No further comment.

6. A flush concrete surface currently exists on Marginal Way in the vicinity of the project. I would suggest that it be removed.
The Gorrill-Palmer plans require removal of the concrete.

7. The dimensions on the site plan for the Marginal Way cross-section and those depicted on a conceptual plan included in the traffic study are different. The plans should be consistent.
The plans are acceptable although as noted above, some adjustment may be necessary as we proceed to final design.

8. It is unclear on what is being proposed by this project for physical improvements to Marginal Way and along Preble Street.
No further comment.

9. A crosswalk should be provided across Marginal Way on the west side of Chestnut Street. This will require an ADA compliant HC ramp.
The applicant has included a crosswalk at this location.

Parking

In an effort to better quantify parking needs, I suggested that the applicant conduct a parking survey at the existing Portland Hall Dormitory located on Congress Street in downtown Portland. Portland Hall was surveyed for each hour on Thursday September 28, 2006 between 6:00am and 7:00pm. According to the survey, the peak parking demand occurred between 7:00am and 8:00am, where 87 vehicles were parked. Based upon a housing demand of 300 students, Portland Hall experiences a parking demand of 0.29 parking spaces per student. Follow-up surveys were conducted in October and indicted 97 cars were parked (0.32 spaces per bed). Some noteworthy information obtained in a telephone conversation with Alisha Menard, the manager of the facility, includes:

- Approximately 130 parking spaces are provided on-site. Approximately 120 spaces are dedicated to students with the remaining assigned to staff and handicapped drivers.
- A waiting list for an on-site parking space is approximately 35.
- The occupants are students from several area schools.
- Parking spaces cost $125.00 per semester.
- For students that do not receive on site parking, they are eligible for City of Portland resident parking permits. Staff provides a letter to the City documenting resident status of students.
- Shuttle bus service is provided between Portland Hall and the Portland campus every ½ hour.
- The issuance of permits is based upon returning students and a lottery system.
- Weekend parking demand is lower than weekday conditions.
- Summer time periods have significantly lower parking demands as compared to typical school periods.
- It was not totally clear why the parking lot was not full during the survey period when considering a waiting list for parking permits. Alisha noted that the characteristics of tenants are such that: some have unusual work schedules; some pay for a parking permit but don't utilize

the space every week; some may prefer to leave their car on-campus; Thursday's can have lower parking needs, because some students do not have Friday classes and leave early; and some pay for the space for comfort of availability for limited use.

Assuming Bayside Village functions similar to Portland Hall, 132 parking spaces should be provided (129 residential spaces and 3 retail employee spaces). It is recommended that the following be required of the applicant.

- Provision of 132 parking spaces for tenants of the project (As an alternative, I would consider the creation of a TDM fund for the Bayside area that would require the applicant to make a financial contribution in lieu of providing the 30 off-site parking spaces. The fund would be used to implemented TDM measures and the City would be responsible for addressing parking deficits at the project site following the results of the monitoring study).
- During the first year, students housed in the project will not be allowed to obtain a Portland Resident Parking Permit. The applicant will operate a car-share program on-site such that parking demand is minimized. The details of the program (number of vehicles to be provided on-site) shall be coordinated with the City Traffic Engineer. The applicant may request modifications following results of the monitoring study.
- A parking monitoring program shall be performed with the following requirements:
  - The study shall be conducted 3 and 12 months after full occupancy of the building (or at times appropriate for a university housing project, subject to approval by the City). Subsequent studies may be required.
  - The study shall include a physical survey of parking facilities used by project tenants and a survey of residents about parking characteristics and needs shall be conducted. The details of the work shall be approved by the City Traffic Engineer.
  - If parking problems are identified, the applicant will be fully responsible for identification and implementation of necessary enhancements to mitigate parking problems.
- A Travel Demand Management (TDM) Program shall be implemented that may comprise of some of the above elements (e.g. car-share program), but may include a shuttle bus program and expanded METRO service. It is suggested that the details of the program be identified by the applicant and the program is subject to an annual review by the City.
- The applicant shall develop a management plan that addresses peak traffic and parking problems associated with student drop-off and pick-up at the beginning and end of the school year.

- Some comments that will need to be addressed during the development of final design plans for Marginal Way and Preble Street improvements under the full implementation of improvements with both Bayside Village and 84 Marginal Way. These are **NOT** the responsibility of this applicant, but are necessary for improvements in the area that the applicant will be contributing financially:

    1. Lane widths on Preble Street southbound should not exceed 12 feet and the bicycle lane should be 5 feet. The curb on the westside of Preble Street will need to be relocated accordingly.
    2. The plans should note that the improvement plan will include all necessary lane assignment signs and traffic signal modifications.
    3. Pavement markings guiding the double left from Preble Street should be provided. Commentary on whether the turning area for this double left is different from current conditions.
    4. The plans indicate that a minor curb adjustment is required on the south side of Marginal Way near Wild Oats. I would suggest that the curb not be moved at this time (it seems wasteful to move it now and adjust it later as implementation of the master plan improvements take place) and the island width be reduced to allow for appropriate roadway receiving width.
    5. The plan should depict the lanes on all approaches such that we can confirm acceptable lane alignment can be provided through the intersection.

The approval is based on the submitted site plan and the findings related to site plan and conditional use review standards as contained in Planning Report 52-06 and Planning staff memo dated for November 14,2006.

Please note the following provisions and requirements for all site plan approvals:

1. Where submission drawings are available in electronic form, the Applicant shall submit any available electronic Autocad files (*.dwg), release 14 or greater, with seven (7) seta of the final plans.

2. A performance guarantee covering the site improvements as well as an inspection fee payment of 2.0% of the guarantee amount and 7 final sets of plans must be submitted to and approved by the Planning Division and Public Works prior to the release of the building permit. If you need to make any modifications to the approved site plan, you must submit a revised site plan for staff review and approval.

3. The site plan approval will be deemed to have expired unless work in the development has commenced within one (1) year of the approval or within a time period agreed upon in writing by the City and the applicant. Requests to extend approvals must be received before the expiration date.

4. A defect guarantee, consisting of 10% of the performance guarantee, must be posted before the performance guarantee will be released.

5. Prior to construction, a pre-construction meeting shall be held at the project site with the contractor, development review coordinator, Public Work's representative and owner to review the construction schedule and critical aspects of the site work. At that time, the site/building contractor shall provide three (3) copies of a detailed construction schedule to the attending City representatives. It shall be the contractor's responsibility to arrange a mutually agreeable time for the pre-construction meeting.

6. If work will occur within the public right-of-way such as utilities, curb, sidewalk and driveway construction, a street opening permit(s) is required for your site. Please contact Carol Merritt at 874-8300, ext. 8828. (Only excavators licensed by the City of Portland are eligible.)

The Development Review Coordinator must be notified five (5) working days prior to date required for final site inspection. The Development Review Coordinator can be reached at the Planning Division at 874-8632. Please make allowances for completion of site plan requirements determined to be incomplete or defective during the inspection. This is essential as all site plan requirements must be completed and approved by the Development Review Coordinator prior to issuance of a Certificate of Occupancy. Please schedule any property closing with these requirements in mind.

If there are any questions, please contact Richard Knowland at 874-8725.

Sincerely,

Kevin Beal, Chair
Portland Planning Board

RE: BAYSIDE VILLAGE STUDENT HOUSING
COST ESTIMATE OF IMPROVEMENTS
TO BE CONTAINED BY PERFORMANCE GUARANTEE

RICK,
ATTACHED IS THE ABOVE LISTED FORM

PLEASE REVIEW. I WILL
CALL ON FRIDAY.

Thanks,

Ryan Leavitt

Planning and Development Department
SUBDIVISION/SITE DEVELOPMENT

COST ESTIMATE OF IMPROVEMENTS TO BE COVERED BY PERFORMANCE GUARANTEE

Date: **June 19, 2007**

Name of Project: **Bayside Village Student Housing**

Address/Location: **120 Marginal Way, Portland, Maine 04101**

Developer: **Bayside Village Student Housing LLC**

Form of Performance Guarantee: _____

Type of Development: **Site Plan** (Major/Minor) _____

TO BE FILLED OUT BY THE APPLICANT:

	PUBLIC			PRIVATE		
Item	Quantity	Unit Cost	Subtotal	Quantity	Unit Cost	Subtotal
1. STREET/SIDEWALK						
Road/Parking Areas	603 sy	$55.	$33,165.	576 sy	$55.	$31,680.

GENERAL NOTES

1. ALL CONCRETE SHALL BE A CLASS "A" AND HAVE A MINIMUM ULTIMATE STRENGTH OF 4000 lbs. PER SQ. INCH AT THE END OF 28 DAYS, UNLESS OTHERWISE NOTED.
2. PRECAST REINFORCED CONE BARREL MANUFACTURE PER ASTM SPEC. C-478-67
3. SEWER BRICK TO CONFORM TO ASTM SPEC. DESIGNATE ON C-32-63, GRADE MA AND SA.
4. ALL MANHOLES SHALL HAVE A BITUMINOUS WATERPROOFING APPLIED TO THE EXTERIOR SURFACE. IF CONSTRUCTION OF BRICK MASONRY, THE SMOOTH MORTAR SURFACE SHALL BE PLASTERED WITH A SMOOTH MORTAR FINISH 3/8" THICK. AFTER THE MORTAR HAS SET, THE SURFACE SHALL BE WATERPROOFED AS REQUIRED BY SUPPLEMENTAL SPEC-IFCATIONS SECTION 604.
5. CASTINGS SHALL CONFORM TO ASTM DESIGNATION A48-CLASS 35. ALL PARTS OF CASTINGS, EXCEPT FINISHED SURFACE, SHALL RECEIVE A COAT OF COAL TAR PITCH VARNISH OR ASPHALTUM PAINT WHICH SHALL BE SMOOTH AND TOUGH BUT NOT BRITTLE.
6. MANHOLES MAY BE CONSTRUCTED OF MASONRY, PRECAST REINFORCED CONCRETE, OR CAST IN PLACE.
7. ALL PRECAST MANHOLES AND CATCH BASINS SHALL BE IDENTIFIED BY STATION AND OFFSET, PAINTED ON THE SIDE OF THE STRUCTURE BY THE MANUFACTURER.
8. STORM AND SEWER MANHOLES SHALL HAVE SOLID COVERS WITH ONE DRILLED HOLE.
9. EXISTING MANHOLE AND CATCH BASIN FRAMES AND COVERS SHALL BE SALVAGED BY THE CONTRACTOR, AND REMAIN THE PROPERTY OF THE CITY OF PORTLAND.
10. INLET HOODS SHALL BE PROVIDED WITHIN ALL CATCH BASIN PIPES 18" OR LESS.

PRECAST CONCRETE CATCH BASIN TYPE "E"

Sheet No.: 10

I. Erosion Control Measures and Site Stabilization

The primary emphasis of the erosion/sedimentation control plan to be implemented for the infrastructure construction is as follows:
- Development of a careful construction sequence.
- Rapid revegetation of denuded areas to minimize the period of soil exposure.
- Rapid stabilization of drainage paths to avoid rill and gully erosion.
- The use of on-site measures to capture sediment (silt fence, check dams, etc.).

The following temporary and permanent erosion and sediment control devices will be implemented as part of the site development. These devices shall be installed as indicated on the plans or as described within this report. For further reference, see the Maine Erosion and Sediment Control Handbook for Construction: Best Management Practices.

A. Temporary Erosion Control Measures

The following measures are planned as temporary erosion/sedimentation control measures during construction:

1. Utilize the existing entrance to the site closest to Chestnut Street to access the site during construction until the proposed access driveways have been constructed.

2. Siltation fence or wood waste compost berms shall be installed downstream of any disturbed areas to trap runoff borne sediments until adequate catch (90% or greater) has occurred. The silt fence and/or the wood waste compost berms shall be installed per the details provided in this package and inspected immediately after each rainfall and at least daily during prolonged rainfall. Repairs shall be made if there are any signs of erosion or sedimentation below the fence or berm line. If there are signs of undercutting at the center or the edges, or impounding of large volumes of water behind fence or berm, the barrier shall be replaced with a stone check dam. Wood waste compost berms are not to be used adjacent to wetland areas that are to be left undisturbed.

3. Straw or hay mulch including hydroseeding is intended to provide cover for denuded or seeded areas until revegetation is established. Mulch placed between April 15th and September 15th on slopes of less then 15 percent shall be anchored by applying water; mulch placed on slopes of equal to or steeper than 15 percent shall be covered by a fabric netting and anchored with staples in accordance with manufacturer's recommendation. Mulch placed between September 15th and April 15th on slopes equal to or steeper than 8 percent shall be covered with a fabric netting and anchored with staples in accordance with the manufacturer's recommendations. Slopes steeper than 3:1 and the drainage swale located in the I-295 Right-of-Way that are to be revegetated shall receive Curlex blankets by American Excelsior or Engineer approved equivalent. Mulch application rates are provided in Attachment A of this section. Mulch shall not be placed over snow.

4. Temporary stockpiles of stumps, grubbings, or common excavation will be protected as follows:

a) Temporary stockpiles shall not be located within 100 feet of any wetlands that are to be left undisturbed and any slopes exceeding 15%.

b) Stockpiles shall be stabilized within 7 days by either temporarily seeding the stockpile with a hydroseed method containing an emulsified mulch tackifier or by covering the stockpile with mulch.

c) Stockpiles shall be surrounded by silt fence or wood-waste compost berms at the time of formation.

5. All denuded areas within 100 feet of an undisturbed wetland that have been rough graded and are not located within a roadway subbase area shall receive mulch or erosion control mesh fabric within 7 days of initial soil disturbance. All areas within 50 feet of undisturbed wetland area shall be mulched prior to any predicted rain event regardless of the 7-day window. In other areas, the time period may be extended to 14 days. All disturbed areas located within 100 feet of a protected natural resource must be protected with a double row of sediment barriers.

6. For work conducted between September 15th and April 15th of any calendar year, all denuded areas will be covered with hay mulch applied at twice the normal application rate and anchored with fabric netting. The time period for applying mulch as noted in Paragraph I.A.5 shall be limited to 7 days for all areas.

7. Marginal Way shall be swept to control off-tracking of mud, debris, and dust as necessary.

8. During grubbing operations stone check dams will be installed at any evident concentrated flow discharge points.

9. Silt fencing with a maximum stake spacing of 6 feet should be used, unless the fence is supported by wire fence reinforcement of minimum 14 gauge and with a maximum mesh spacing of 6 inches, in which case stakes may be spaced a maximum of 10 feet apart. The bottom of the fence should be anchored.

10. Wood waste compost/bark berms may be used in lieu of siltation fencing. Berms shall be removed and spread into a layer not to exceed 3" thick once upstream areas are completed and a 90% catch of vegetation is attained. Wood waste erosion tubes may also be used for perimeter sediment control or check dams, or to reduce slope lengths. These tubes may be created by filling Filtrexx mesh tubes or approved equivalent with wood waste material and staking the tube to the ground where the control is necessary.

11. Inlet Protection measures shall be implemented for all catch basins located with the disturbed construction area. Measures shall be maintained regularly and shall not cause flooding in public right-of-ways.

12. Water shall be furnished and applied in accordance with MDOT specifications – Section 637 – Dust Control.

13. Loam and seed is intended to serve as the primary permanent revegetative measure for all denuded areas not provided with other erosion control measures such as riprap. Application rates are provided in Attachment A of this section. Seeding shall not occur over snow.

B. Permanent Erosion Control Measures

The following permanent erosion control measures have been designed as part of the Erosion and Sedimentation Control Plan:

1. All areas disturbed during construction but not subject to other restoration (building, paving, riprap, etc.) shall be loamed, limed, fertilized, mulched, and seeded. Fabric netting anchored with staples shall be placed over the mulch in areas as noted in Paragraph I.A.3. All disturbed areas within 100 feet of an undisturbed wetland area shall be mulched prior to any predicted rain event regardless of the 7-day window. Native topsoil shall be stockpiled and reused for final restoration if deemed to be of sufficient quality.

II. Implementation Schedule

The following construction sequence shall be required to insure that the effectiveness of the erosion and sedimentation control measures is optimized:

Note: For all grading activities, the contractor shall exercise extreme caution not to overexpose the site by limiting the disturbed area.

1. Install perimeter siltation fence and/or wood waste berms prior to grubbing respective areas.
2. Clear and grub area as necessary for construction.
3. Remove existing pavement within work limits.
4. During grubbing operations, install stone check dams at any evident concentrated flow discharge points.
5. Commence earthwork operations for proposed driveways and apartment foundations.
6. Continue grading to subgrade as necessary.
7. Commence installation of underground utilities.
8. Complete remaining earthwork operations.
9. Install subbase and base course gravels for driveways.
10. Complete installation of utility appurtenances.
11. Install surface course gravels for the driveways.
12. Loam, lime, fertilize, seed, and mulch remaining disturbed areas.
13. Remove accumulated sediment from ahead of any sediment barriers as necessary.
14. Once the site is stabilized and a 90% catch of vegetation has been obtained, remove all temporary erosion control measures.
15. Touch up loam and seed.

Note: All denuded areas not subject to final paving, riprap, or gravel shall be revegetated.

Prior to construction of the project, the contractor shall submit to the owner a schedule for the completion of the work, which will satisfy the following criteria:

1. The above construction sequence shall generally be completed in the specified order; however, several separate items may be constructed simultaneously. Work must also be scheduled or phased to prevent the extent of the exposed areas as specified below. The intent of the above sequence is to provide for sufficient erosion and sedimentation control and to have structural measures such as silt fence and construction entrance in place before large areas of land are denuded.

2. The work shall be conducted in sections which will:

a) Limit the amount of exposed area to those areas in which work is expected to be undertaken during the proceeding 30 days.

b) Revegetate disturbed areas as rapidly as possible. All areas shall be permanently stabilized within 7 days of final grading or before a storm event, or temporarily stabilized within 7 days of initial disturbance of soil for areas within 100 feet of an undisturbed wetland area and within 14 days for all other areas. Areas within 100 feet of an undisturbed wetland shall be mulched prior to any predicted rain event regardless of the 7-day window.

III. Winter Stabilization Plan

If a summer/fall construction schedule is not possible and construction is necessary between September 15th and April 15th of any calendar year, the contractor shall submit a schedule, which will satisfy the following criteria:

1. The extent of exposed area shall be limited to those areas in which work is expected to be undertaken during the proceeding 15 days and can be mulched in the event of a predicted snow event.

2. All disturbed areas shall be covered with mulch within 7 days of final grading. Mulch shall not be placed over snow.

3. Once final grade has been established, the contractor may choose to dormant seed the disturbed areas prior to placement of mulch and placement of staple-anchored fabric netting.

a. If dormant seeding is used for the site, all disturbed areas shall receive 6" of loam and seed at an application rate of 5 lbs. per 1000 s.f. Seeding shall not occur over snow.

All areas seeded during the winter months shall be inspected in the spring for adequate catch. All areas insufficiently vegetated (less than 80% catch) shall be revegetated by replacing loam, seed, and mulch as necessary to achieve 80% catch.

b. If dormant seeding is not used for the site, all disturbed areas shall be revegetated in the spring.

4. The area of denuded non-stabilized construction area shall be limited to the minimum area practicable. An area shall be considered denuded until the subbase gravel is installed or the areas of future loam and seed have been loamed, seeded, and mulched at a rate twice that specified in the seeding plan (e.g. 115 lbs. per 1,000 s.f. x 2 = 230 lbs. per 1,000 s.f.).

5. The above schedule shall be subject to the approval of the Owner.

The Contractor shall install any added measures that may be necessary to control erosion and sedimentation from the site dependent upon the actual site and weather conditions.

The Contractor shall note that no areas within 100 feet of an undisturbed wetland shall remain denuded for longer than 7 days before being temporarily stabilized. All other areas shall be stabilized within 14 days. For construction between September 15th and April 15th of any calendar year, all areas shall be temporarily stabilized within 7 days.

IV. Inspection and Maintenance

The following inspection and maintenance standards shall be required to insure the effectiveness of the erosion and sedimentation control measures are optimized during construction.

For further reference, see the Maine Department of Environmental Protection Chapter 500 Stormwater Management Rules and the Maine Construction General Permit (MCGP) requirements.

1. Inspect disturbed and impervious areas, erosion control measures, materials storage areas exposed to precipitation and locations where vehicles enter or exit the site. Inspection should occur at least once a week as well as before and after a storm event, and prior to completing permanent stabilization measures.

2. Maintain all erosion and stormwater control measures until areas are permanently stabilized. If maintenance, modification, and/or installation of additional best management practices (BMPs) are necessary, implementation must be completed within 7 calendar days and prior to any storm event.

V. Housekeeping

The following standards shall be required. For further reference, see the Maine Department of Environmental Protection Chapter 500 Stormwater Management Rules.

1. Spill prevention controls must be utilized to prevent pollutants from being discharged from materials onsite.

2. During construction, liquid petroleum products and other hazardous materials with the potential to contaminate groundwater may not be stored or handled in areas of the site draining to an infiltration area or adjacent to the stormwater catch basins and drain manholes.

3. Action must be taken to ensure activities do not result in noticeable erosion of soils or fugitive dust emissions during or after construction.

4. Litter, construction debris, and chemicals exposed to stormwater must be prevented from becoming a pollutant source.

5. Water collected as a result of trench dewatering must be spread through natural wooded buffers or removed to areas that are specifically designed to collect the maximum amount of sediment possible, like a cofferdam sedimentation basin. Avoid allowing the water to flow over disturbed areas of the site.

6. Identify and prevent contamination by non-stormwater discharges.

7. Additional requirements may be applied on a site-specific basis.

1/4 TREE AND SHRUB INSTALLATION
NOT TO SCALE

NOTES

DIG HOLE AT LEAST 2 TIMES THE WIDTH OF ROOT BALL AND AS DEEP AS THE ROOT BALL CNO DEEPER). SET ROOT BALL CENTERED, WITH TOP AT GROUND LEVEL OR SLIGHTLY HIGHER. CORRECT HOLE DEPTH AS NEEDED.

FOR DECIDUOUS AND NEEDLED EVERGREEN TREES AND SHRUBS 1 FULL WHEELBARROW EXISTING SOIL, 2 SHOVELS PEAT, 1 SHOVEL WELL ROTTED MANURE, OR OTHER COMPOSTED ORGANIC MATERIAL FOR BROADLEAVED EVERGREENS AND RELATED ERICACAE PLANTS, 1 FULL WHEELBARROW EXISTING SOIL, 3-4 SHOVELS PEAT, 1 SHOVEL WELL ROTTED MANURE, OR OTHER COMPOSTED ORGANIC MATERIAL OF LOW pH (RECOMMENDATIONS ARE FOR ACCEPTABLE PLANTING AREAS).

CONTAINER GROWN STOCK:
REMOVE CONTAINER PROTECTING ROOT BALL, GENTLY COMB OUT ROOTS, PRUNE DAMAGED ROOTS.

BACKFILL 2/3 OF HOLE WITH AMENDED SOIL THEN FILL HOLE WITH WATER, LET DRAIN, REPEAT WATER AND DRAIN. BACK FILL TO FINISH GRADE, TAMP GENTLY, AND CREATE EARTH SAUCER. WATER THOROUGHLY ONCE AGAIN TO REMOVE REMAINING AIR POCKETS.

2" X 2" OR 2 1/2" DIAMETER STAKES WITH 2 #12 GAUGE WIRES ENGAGED IN 2-PLY REINFORCED RUBBER HOSE 1/2" DIAMETER OR CHAINLOCK AS APPROVED BY LANDSCAPE ARCHITECT. 2 STAKES LOCATED 180° APART (STAKES SHALL BE FIRMLY SET TO PROVIDE NECESSARY TENSION.

GENERAL PLANTING NOTES

1. CALL DIG-SAFE (1-888-344-7233) PRIOR TO BEGINNING WORK. THE LANDSCAPE CONTRACTOR IS ADVISED OF THE PRESENCE OF UNDERGROUND UTILITIES AND SHALL VERIFY THE EXISTENCE AND LOCATION OF SAME BEFORE COMMENCING AND DIGGING OPERATIONS. THE LANDSCAPE CONTRACTOR SHALL REPLACE OR REPAIR UTILITIES PAVING, WALKS, CURBING, ETC. DAMAGED IN PERFORMANCE OF THIS JOB AT NO ADDITIONAL COST TO OWNER.
2. CONTRACTOR SHALL THOROUGHLY FAMILIARIZE HIMSELF WITH ALL SITE CONDITIONS PRIOR TO CONSTRUCTION BIDDING.
3. DO NOT SCALE FROM DRAWINGS. ANY OMISSIONS IN DIMENSIONING SHALL BE REPORTED IMMEDIATELY TO THE LANDSCAPE ARCHITECT. ANY DISCREPANCIES BETWEEN DRAWINGS, DETAILS, NOTES AND SPECS SHALL BE IMMEDIATELY REPORTED TO THE LANDSCAPE ARCHITECT FOR FURTHER DIRECTION AND RESOLUTION BEFORE ANY ADDITIONAL WORK PROCEEDS.
4. PROVIDE SMOOTH TRANSITION WHERE NEW WORK MEETS EXISTING CONDITIONS.
5. CONTRACTOR SHALL FURNISH AND PLACE 12 INCHES OF LOAM IN ALL SHRUB BEDS, 30 INCHES IN ALL TREE PITS, AND 6 INCHES UNDER ALL TURF AREAS. THE LANDSCAPE CONTRACTOR SHALL COORDINATE SUBGRADE PREPARATION WITH THE GENERAL CONTRACTOR PRIOR TO PLACING LOAM.
6. ALL PLANT MATERIAL INSTALLED SHALL MEET THE SPECIFICATIONS OF "AMERICAN STANDARDS FOR NURSERY STOCK BY THE AMERICAN ASSOCIATION OF NURSERYMEN".
7. ALL PLANT MATERIAL SHALL BE FREE FROM INSECTS AND DISEASE.
8. ALL PLANTING SHALL BE DONE IN ACCORDANCE WITH ACCEPTABLE HORTICULTURAL PRACTICES. THIS IS TO INCLUDE PROPER PLANTING MIX, PLANT BED AND TREE PIT PREPARATION, PRUNING STAKING OR GUYING WRAPPING, SPRAYING, FERTILIZATION, PLANTING AND ADEQUATE MAINTENANCE UNTIL ACCEPTANCE FROM THE OWNER.
9. ALL GRASS, OTHER VEGETATION AND DEBRIS SHALL BE REMOVED FROM ALL PLANTING AREAS PRIOR TO PLANTING.
10. EXISTING TREES TO BE PRESERVED SHALL BE PROTECTED DURING CONSTRUCTION AND SHALL BE THE RESPONSIBILITY OF THE GENERAL CONTRACTOR.
11. ALL SHRUB BEDS AND TREE PITS SHALL BE MULCHED WITH 3" CLEAN SHREDDED BLACK MULCH.
12. ANY DEVIATION FROM THE LANDSCAPE PLAN, INCLUDING PLANT LOCATION, SELECTION, SIZE, QUANTITY, OR CONDITION SHALL BE REVIEWED AND APPROVED BY THE OWNER AND LANDSCAPE ARCHITECT (AND MUNICIPAL AUTHORITY, IF APPLICABLE) PRIOR TO INSTALLATION ON SITE.
13. WHERE INDICATED ON PLAN, PLANTING SOIL MIXTURE FOR GROUND COVER AND PERENNIAL BED AREAS SHALL CONSIST OF FOUR PARTS TOPSOIL, TWO PARTS SPHAGNUM PEAT MOSS, AND ONE PART HORTICULTURAL PERLITE BY VOLUME. PEAT MOSS MAY BE SUBSTITUTED WITH WELL-ROTTED OR DEHYDRATED MANURE OR COMPOST. ROTOTILL BEDS TO A DEPTH OF 8 INCHES.
14. DAMAGE TO EXISTING SITE IMPROVEMENT DURING INSTALLATION OF LANDSCAPE MATERIAL SHALL BE THE RESPONSIBILITY OF THE LANDSCAPE CONTRACTOR.

GENERAL NOTES

1. ALL CONCRETE SHALL BE A CLASS "A" AND HAVE A MINIMUM ULTIMATE STRENGTH OF 4000 lbs. PER SQ. INCH AT THE END OF 28 DAYS, UNLESS OTHERWISE NOTED.
2. PRECAST REINFORCED CONE BARREL MANUFACTURE PER ASTM SPEC. C-478-67
3. SEWER BRICK TO CONFORM TO ASTM SPEC. DESIGNATE ON C-32-63, GRADE MA AND SA.
4. ALL MANHOLES SHALL HAVE A BITUMINOUS WATERPROOFING APPLIED TO THE EXTERIOR SURFACE. IF CONSTRUCTION OF BRICK MASONRY, THE SMOOTH MORTAR SURFACE SHALL BE PLASTERED WITH A SMOOTH MORTAR FINISH 3/8" THICK. AFTER THE MORTAR HAS SET, THE SURFACE SHALL BE WATERPROOFED AS REQUIRED BY SUPPLEMENTAL SPECIFCATIONS SECTION 604.
5. CASTINGS SHALL CONFORM TO ASTM DESIGNATION A48-CLASS 35. ALL PARTS OF CASTINGS, EXCEPT FINISHED SURFACE, SHALL RECEIVE A COAT OF COAL TAR PITCH VARNISH OR ASPHALTUM PAINT WHICH SHALL BE SMOOTH AND TOUGH BUT NOT BRITTLE.
6. MANHOLES MAY BE CONSTRUCTED OF MASONRY, PRECAST REINFORCED CONCRETE, OR CAST IN PLACE.
7. ALL PRECAST MANHOLES AND CATCH BASINS SHALL BE IDENTIFIED BY STATION AND OFFSET, PAINTED ON THE SIDE OF THE STRUCTURE BY THE MANUFACTURER.
8. STORM AND SEWER MANHOLES SHALL HAVE SOLID COVERS WITH ONE DRILLED HOLE.
9. EXISTING MANHOLE AND CATCH BASIN FRAMES AND COVERS SHALL BE SALVAGED BY THE CONTRACTOR, AND REMAIN THE PROPERTY OF THE CITY OF PORTLAND.
10. CASCO TRAPS SHALL BE PROVIDED WITHIN ALL CATCH BASINS WITH 12" OUTLETS.

I. Erosion Control Measures and Site Stabilization

The primary emphasis of the erosion/sedimentation control plan to be implemented for the infrastructure construction is as follows:
- Development of a careful construction sequence.
- Rapid revegetation of denuded areas to minimize the period of soil exposure.
- Rapid stabilization of drainage paths to avoid rill and gully erosion.
- The use of on-site measures to capture sediment (silt fence, check dams, etc.).

The following temporary and permanent erosion and sediment control devices will be implemented as part of the site development. These devices shall be installed as indicated on the plans or as described within this report. For further reference, see the Maine Erosion and Sediment Control Handbook for Construction: Best Management Practices.

A. Temporary Erosion Control Measures

The following measures are planned as temporary erosion/sedimentation control measures during construction:

1. Utilize the existing entrance to the site closest to Chestnut Street to access the site during construction until the proposed access driveways have been constructed.

2. Siltation fence or wood waste compost berms shall be installed downstream of any disturbed areas to trap runoff borne sediments until adequate catch (90% or greater) has occurred. The silt fence and/or the wood waste compost berms shall be installed per the details provided in this package and inspected immediately after each rainfall and at least daily during prolonged rainfall. Repairs shall be made if there are any signs of erosion or sedimentation below the fence or berm line. If there are signs of undercutting at the center or the edges, or impounding of large volumes of water behind fence or berm, the barrier shall be replaced with a stone check dam. Wood waste compost berms are not to be used adjacent to wetland areas that are to be left undisturbed.

3. Straw or hay mulch including hydroseeding is intended to provide cover for denuded or seeded areas until revegetation is established. Mulch placed between April 15th and September 15th on slopes of less then 15 percent shall be anchored by applying water; mulch placed on slopes of equal to or steeper than 15 percent shall be covered by a fabric netting and anchored with staples in accordance with manufacturer's recommendation. Mulch placed between September 15th and April 15th on slopes equal to or steeper than 8 percent shall be covered with a fabric netting and anchored with staples in accordance with the manufacturer's recommendations. Slopes steeper than 3:1 and the drainage swale located in the I-295 Right-of-Way that are to be revegetated shall receive Curlex blankets by American Excelsior or Engineer approved equivalent. Mulch application rates are provided in Attachment A of this section. Mulch shall not be placed over snow.

4. Temporary stockpiles of stumps, grubbings, or common excavation will be protected as follows:

a) Temporary stockpiles shall not be located within 100 feet of any wetlands that are to be left undisturbed and any slopes exceeding 15%.

b) Stockpiles shall be stabilized within 7 days by either temporarily seeding the stockpile with a hydroseed method containing an emulsified mulch tackifier or by covering the stockpile with mulch.

c) Stockpiles shall be surrounded by silt fence or wood-waste compost berms at the time of formation.

5. All denuded areas within 100 feet of an undisturbed wetland that have been rough graded and are not located within a roadway subbase area shall receive mulch or erosion control mesh fabric within 7 days of initial soil disturbance. All areas within 50 feet of undisturbed wetland area shall be mulched prior to any predicted rain event regardless of the 7-day window. In other areas, the time period may be extended to 14 days. All disturbed areas located within 100 feet of a protected natural resource must be protected with a double row of sediment barriers.

6. For work conducted between September 15th and April 15th of any calendar year, all denuded areas will be covered with hay mulch applied at twice the normal application rate and anchored with fabric netting. The time period for applying mulch as noted in Paragraph I.A.5 shall be limited to 7 days for all areas.

7. Marginal Way shall be swept to control off-tracking of mud, debris, and dust as necessary.

8. During grubbing operations stone check dams will be installed at any evident concentrated flow discharge points.

9. Silt fencing with a maximum stake spacing of 6 feet should be used, unless the fence is supported by wire fence reinforcement of minimum 14 gauge and with a maximum mesh spacing of 6 inches, in which case stakes may be spaced a maximum of 10 feet apart. The bottom of the fence should be anchored.

10. Wood waste compost/bark berms may be used in lieu of siltation fencing. Berms shall be removed and spread into a layer not to exceed 3" thick once upstream areas are completed and a 90% catch of vegetation is attained. Wood waste erosion tubes may also be used for perimeter sediment control or check dams, or to reduce slope lengths. These tubes may be created by filling Filtrexx mesh tubes or approved equivalent with wood waste material and staking the tube to the ground where the control is necessary.

11. Inlet Protection measures shall be implemented for all catch basins located with the disturbed construction area. Measures shall be maintained regularly and shall not cause flooding in public right-of-ways.

12. Water shall be furnished and applied in accordance with MDOT specifications – Section 637 – Dust Control.

13. Loam and seed is intended to serve as the primary permanent revegetative measure for all denuded areas not provided with other erosion control measures such as riprap. Application rates are provided in Attachment A of this section. Seeding shall not occur over snow.

B. Permanent Erosion Control Measures

The following permanent erosion control measures have been designed as part of the Erosion and Sedimentation Control Plan:

1. All areas disturbed during construction but not subject to other restoration (building, paving, riprap, etc.) shall be loamed, limed, fertilized, mulched, and seeded. Fabric netting anchored with staples shall be placed over the mulch in areas as noted in Paragraph I.A.3. All disturbed areas within 100 feet of an undisturbed wetland area shall be mulched prior to any predicted rain event regardless of the 7-day window. Native topsoil shall be stockpiled and reused for final restoration if deemed to be of sufficient quality.

II. Implementation Schedule

The following construction sequence shall be required to insure that the effectiveness of the erosion and sedimentation control measures is optimized:

Note: For all grading activities, the contractor shall exercise extreme caution not to overexpose the site by limiting the disturbed area.

1. Install perimeter siltation fence and/or wood waste berms prior to grubbing respective areas.

2. Clear and grub area as necessary for construction.

3. Remove existing pavement within work limits.

4. During grubbing operations, install stone check dams at any evident concentrated flow discharge points.

5. Commence earthwork operations for proposed driveways and apartment foundations.

6. Continue grading to subgrade as necessary.

7. Commence installation of underground utilities.

8. Complete remaining earthwork operations.

9. Install subbase and base course gravels for driveways.

10. Complete installation of utility appurtenances.

11. Install surface course gravels for the driveways.

12. Loam, lime, fertilize, seed, and mulch remaining disturbed areas.

13. Remove accumulated sediment from ahead of any sediment barriers as necessary.

14. Once the site is stabilized and a 90% catch of vegetation has been obtained, remove all temporary erosion control measures.

15. Touch up loam and seed.

Note: All denuded areas not subject to final paving, riprap, or gravel shall be revegetated.

Prior to construction of the project, the contractor shall submit to the owner a schedule for the completion of
the work, which will satisfy the following criteria:

1. The above construction sequence shall generally be completed in the specified order; however, several separate items may be constructed simultaneously. Work must also be scheduled or phased to prevent the extent of the exposed areas as specified below. The intent of the above sequence is to provide for sufficient erosion and sedimentation control and to have structural measures such as silt fence and construction entrance in place before large areas of land are denuded.

2. The work shall be conducted in sections which will:

a) Limit the amount of exposed area to those areas in which work is expected to be undertaken during the proceeding 30 days.

b) Revegetate disturbed areas as rapidly as possible. All areas shall be permanently stabilized within 7 days of final grading or before a storm event, or temporarily stabilized within 7 days of initial disturbance of soil for areas within 100 feet of an undisturbed wetland area and within 14 days for all other areas. Areas within 100 feet of an undisturbed wetland shall be mulched prior to any predicted rain event regardless of the 7-day window.

III. Winter Stabilization Plan

If a summer/fall construction schedule is not possible and construction is necessary between September 15th and April 15th of any calendar year, the contractor shall submit a schedule, which will satisfy the following criteria:

1. The extent of exposed area shall be limited to those areas in which work is expected to be undertaken during the proceeding 15 days and can be mulched in the event of a predicted snow event.

2. All disturbed areas shall be covered with mulch within 7 days of final grading. Mulch shall not be placed over snow.

3. Once final grade has been established, the contractor may choose to dormant seed the disturbed areas prior to placement of mulch and placement of staple-anchored fabric netting.

a. If dormant seeding is used for the site, all disturbed areas shall receive 6" of loam and seed at an application rate of 5 lbs. per 1000 s.f. Seeding shall not occur over snow.

All areas seeded during the winter months shall be inspected in the spring for adequate catch. All areas insufficiently vegetated (less than 80% catch) shall be revegetated by replacing loam, seed, and mulch as necessary to achieve 80% catch.

b. If dormant seeding is not used for the site, all disturbed areas shall be revegetated in the spring.

4. The area of denuded non-stabilized construction area shall be limited to the minimum area practicable. An area shall be considered denuded until the subbase gravel is installed or the areas of future loam and seed have been loamed, seeded, and mulched at a rate twice that specified in the seeding plan (e.g. 115 lbs. per 1,000 s.f. x 2 = 230 lbs. per 1,000 s.f.).

5. The above schedule shall be subject to the approval of the Owner.

The Contractor shall install any added measures that may be necessary to control erosion and sedimentation from the site dependent upon the actual site and weather conditions.

The Contractor shall note that no areas within 100 feet of an undisturbed wetland shall remain denuded for longer than 7 days before being temporarily stabilized. All other areas shall be stabilized within 14 days. For construction between September 15th and April 15th of any calendar year, all areas shall be temporarily stabilized within 7 days.

IV. Inspection and Maintenance

The following inspection and maintenance standards shall be required to insure the effectiveness of the erosion and sedimentation control measures are optimized during construction.

For further reference, see the Maine Department of Environmental Protection Chapter 500 Stormwater Management Rules and the Maine Construction General Permit (MCGP) requirements.

1. Inspect disturbed and impervious areas, erosion control measures, materials storage areas exposed to precipitation and locations where vehicles enter or exit the site. Inspection should occur at least once a week as well as before and after a storm event, and prior to completing permanent stabilization measures.

2. Maintain all erosion and stormwater control measures until areas are permanently stabilized. If maintenance, modification, and/or installation of additional best management practices (BMPs) are necessary, implementation must be completed within 7 calendar days and prior to any storm event.

V. Housekeeping

The following standards shall be required. For further reference, see the Maine Department of Environmental Protection Chapter 500 Stormwater Management Rules.

1. Spill prevention controls must be utilized to prevent pollutants from being discharged from materials onsite.

2. During construction, liquid petroleum products and other hazardous materials with the potential to contaminate groundwater may not be stored or handled in areas of the site draining to an infiltration area or adjacent to the stormwater catch basins and drain manholes.

3. Action must be taken to ensure activities do not result in noticeable erosion of soils or fugitive dust emissions during or after construction.

4. Litter, construction debris, and chemicals exposed to stormwater must be prevented from becoming a pollutant source.

5. Water collected as a result of trench dewatering must be spread through natural wooded buffers or removed to areas that are specifically designed to collect the maximum amount of sediment possible, like a cofferdam sedimentation basin. Avoid allowing the water to flow over disturbed areas of the site.

6. Identify and prevent contamination by non-stormwater discharges.

7. Additional requirements may be applied on a site-specific basis.

CURB		

NOTES:

1. PROPOSED 8 INCH SANITARY SEWER SERVICE CONNECTION SHALL BE CONSTRUCTED WITH CHIMNEY LATERAL. INVERT ELEVATION FOR THE PROPOSED SERVICE CONNECTION SHALL BE CONFIRMED PRIOR TO THE START OF CONSTRUCTION. ALL CONSTRUCTION METHODS AND MATERIALS SHALL BE IN ACCORDANCE WITH THE CITY OF PORTLAND, MAINE'S TECHNICAL AND DESIGN STANDARDS AND GUIDELINES, LATEST EDITION, AND SHALL MEET THE APPROVAL OF THE CITY OF PORTLAND PUBLIC WORKS DEPARTMENT.
2. INTERNAL BUILDING SANITARY SEWER PIPING, SANITARY DROPS, AND OTHER INTERNAL PLUMBING FEATURES ARE SHOWN FOR INFORMATIONAL PURPOSES AND WERE PROVIDED BY NEILL AND GUNTER, INC. ON AN INFORMATIONAL SKETCH DATED JULY 16, 2007. ALL INTERNAL SANITARY PLUMBING INFORMATION SHALL BE DETAILED ON BUILDING PLANS AND SHALL SHOW THE CONNECTION TO SMH #3 AS SHOWN ON THIS DRAWING.

CITY OF PORTLAND NOTES

1. LANDSCAPING SHALL MEET THE "ARBORICULTURAL SPECIFICATIONS AND STANDARDS OF PRACTICE AND LANDSCAPE GUIDELINES" OF THE CITY OF PORTLAND TECHNICAL AND DESIGN STANDARDS AND GUIDELINES.
2. THE ENTIRE SITE SHALL BE DEVELOPED AND/OR MAINTAINED AS DEPICTED ON THE SITE PLAN. APPROVAL OR THE PLANNING AUTHORITY OF PLANNING BOARD SHALL BE REQUIRED FOR ANY ALTERATION TO OR DEVIATION FROM THE APPROVED SITE PLAN, INCLUDING, WITHOUT LIMITATION: TOPOGRAPHY; DRAINAGE; LANDSCAPING; RETENTION OF WOODED OR LAWN AREAS; ACCESS; SIZE, LOCATION AND SURFACING OF PARKING AREAS; AND LOCATION AND SIZE OF BUILDINGS.
3. ALL POWERLINE UTILITIES SERVING THE BUILDING SHALL BE UNDERGROUND.
4. SIDEWALKS AND CURBING SHALL BE DESIGNED AND BUILT WITH TIP DOWN RAMPS AT ALL STREET CORNERS, CROSSWALKS AND DRIVEWAYS IN CONFORMANCE WITH THE CITY OF PORTLAND TECHNICAL AND DESIGN STANDARDS AND GUIDELINES.
5. ALL EROSION AND SEDIMENT CONTROL MEASURES SHALL BE DESIGNED IN ACCORDANCE WITH MAINE EROSION AND SEDIMENT CONTROL HANDBOOK FOR CONTRUCTION: BEST MANAGEMENT PRACTICES PUBLISHED BY THE CUMBERLAND COUNTY SOIL AND WATER CONSERVATION DISTRICT AND MAINE DEPARTMENT OF ENVIRONMENTAL PROTECTION, MARCH 2003, OR LATEST EDITION. (NOTE: THE SITE PLAN SHOULD SPECIFY THE EROSION CONTROL DEVICE TO BE EMPLOYED (SILT FENCE, HAY BALE, ETC.) AS WELL AS THEIR LOCATION.)
6. ALL EROSION CONTROL MEASURES SHALL BE INSTALLED PRIOR TO ANY SITE EXCAVATION OR REGRADING.
7. ALL DISTURBED AREAS ON THE SITE NOT COVERED BY BUILDINGS OR PAVED AREAS SHALL BE STABILIZED WITH LOAM AND SEED OR OTHER METHODS AS REQUIRED BY BEST MANAGEMENT PRACTICES (SEE ABOVE.)
8. PRIOR TO CONSTRUCTION, A PRECONSTRUCTION MEETING SHALL BE HELD AT THE PROJECT SITE WITH THE CONTRACTOR, DEVELOPMENT REVIEW COORDINATOR, PUBLIC WORK'S REPRESENTATIVE AND OWNER TO REVIEW THE CONSTRUCTION SCHEDULE AND CRITICAL ASPECTS OF THE SITE WORK. AT THAT TIME, THE SITE/BUILDING CONTRACTOR SHALL PROVIDE THREE (3) COPIES OF A DETAILED CONSTRUCTION SCHEDULE TO THE ATTENDING CITY REPRESENTATIVE. IT SHALL BE THE CONTRACTOR'S RESPONSIBILITY TO ARRANGE A MUTUALLY AGREEABLE TIME FOR THE PRECONSTUCTION MEETING.
9. EXISTING VEGETATION SHALL BE CONSERVED IN AREAS SHOWN ON THIS SITE. FENCING OR OTHER PROTECTIVE BARRIERS SHALL BE ERECTED OUTSIDE THE DRIP-LINE OF INDIVIDUAL GROUPINGS OF TREES DESIGNATED FOR PRESERVATION PRIOR TO THE ONSET OF CONSTRUCTION. REGRADING SHALL NOT TAKE PLACE WITHIN THE DRIP-LINE OF TREES DESIGNATED FOR PRESERVATION. NO STORAGE OR CONSTRUCTION MATERIALS SHALL BE PERMITTED WITHIN THE DRIP-LINE OF TREES TO BE PRESERVED.

GENERAL NOTES

1. TOTAL SITE AREA:
   SOUTHERN MAINE STUDENT HOUSING, LLC: 57,887 SF (1.33 ACRES)
   CAPITAL, LLC: 59,577 SF (1.37 ACRES)
   117,464 SF (2.70 ACRES)
2. ZONING DISTRICT: B-7 MIXED DEVELOPMENT DISTRICT ZONE
3. SPACE AND BULK REQUIREMENTS:

	B-7	PROPOSED
MINIMUM LOT SIZE:	NONE	1.33 ACRES
MINIMUM FRONTAGE:	NONE	383.45 FEET
MINIMUM FRONT SETBACK:	NONE	0 FEET
MINIMUM SIDE SETBACK:	NONE	0 FEET
MINIMUM REAR SETBACK:	NONE	4 FEET
MAXIMUM STREET SETBACK:	10 FEET	3 FEET
MAXIMUM LOT COVERAGE:	100%	82%
MAXIMUM RESIDENTIAL DENSITY:	NONE	N/A
MAXIMUM BUILDING HEIGHT:	85 FEET	54 FEET
MINIMUM BUILDING HEIGHT:	4 FLOORS	5 FLOORS

4. OWNER OF PROPERTY: CITY OF PORTLAND, 389 CONGRESS STREET, PORTLAND, MAINE 04101
   OPTION TO PURCHASE BY: SOUTHERN MAINE STUDENT HOUSING, LLC, 247 COMMERCIAL STREET, ROCKPORT, MAINE 04856
5. PARKING REQUIRED: REQUIRED: 0 SPACES; PROPOSED: 102 SPACES - GARAGE ON SITE (5) HC SPACES, (5) COMPACT SPACES, (92) FULL SIZED
6. BUILDING SUMMARY:

BUILDING FOOTPRINT:	47,797 SF
TOTAL BUILDING SQUARE FOOTAGE:	206,147 SF
RETAIL SPACE:	3,857 SF
APARTMENT UNITS:	100 UNITS
BEDROOMS:	400 BEDROOMS
ROOF GARDEN SPACE:	10,922 SF
LOT COVERAGE (BUILDING)	82%

7. BOUNDARY LINE AND TOPOGRAPHIC INFORMATION BASED ON SURVEYS PREPARED BY OWEN HASKELL, INC. FROM PLANS DATED JANUARY 3, 2006.
8. BENCHMARKS ARE PK NAIL IN UP#13 ON THE WESTERN SIDE OF MARGINAL WAY WITH AN ELEVATION OF 10.62 AND NORTHERN MOST BONNET BOLT ON FIRE HYDRANT ON EASTERN SIDE OF MARGINAL WAY WITH AN ELEVATION OF 12.22.
9. ALL MATERIALS AND INSTALLATION DETAILS SHALL MEET M.D.O.T. AND/OR CITY OF PORTLAND STANDARD SPECIFICATIONS.
10. STREETSIDE RIGHT-OF-WAY LIGHTING SHALL BE HOLOPHANE ESPLANADE SERIES LUMINAIRE WITH TAPERED STEEL POLE. OEG SERIES BRACKET ARM, 24'-3" NOMINAL HEIGHT. COLOR OLD NAVY SILVER. THIS LIGHTING IS STANDARD FOR THE BAYSIDE NEIGHBORHOOD.
11. BUILDING MOUNTED AND SITE POLE MOUNTED LIGHTING TO BE MANUFACTURED BY SHAPER. BUILDING MOUNTED LIGHTING TO BE G45-WP-DB, 50 WATT METAL HALIDE. SITE POLE MOUNTED LIGHTING TO BE 445-PT SERIES, 100 WATT METAL HALIDE, 12'-6" FEET HIGH.
12. CONTRACTOR SHALL BE RESPONSIBLE FOR MAINTAINING AND KEEPING STREETS CLEAN DURING CONSTRUCTION. A MAINTENANCE PLAN SHALL BE PREPARED AND APPROVED BY THE CITY AND OWNERS REPRESENTATIVE.
13. DIMENSIONS ARE FROM FACE OF CURB.
14. SITE CONTRACTOR SHALL BE RESPONSIBLE FOR PROVIDING AND INSTALLING ALL LIGHT POLE BASES (INCLUDING THE PUBLIC FLOW) AND TRENCHING FOR CONDUIT.
15. ELECTRICAL CONTRACTOR SHALL BE RESPONSIBLE FOR ALL CONDUIT FOR ON-SITE AND OFF-SITE ELECTRIC SERVICE FOR POLE MOUNTED FIXTURES. ELECTRICAL CONTRACTOR SHALL BE RESPONSIBLE FOR ON-SITE POLE MOUNTED LIGHT FIXTURES AND POLES. ELECTRICAL CONTRACTOR SHALL BE RESPONSIBLE FOR OFF-SITE LIGHT POLES. OFF-SITE POLE MOUNTED FIXTURES TO BE LEASED BY THE CITY OF PORTLAND FROM CENTRAL MAINE POWER. OFF-SITE POLE MOUNTED FIXTURES TO BE INSTALLED BY CENTRAL MAINE POWER.
16. SITE CONTRACTOR SHALL BE RESPONSIBLE FOR STRIPING OF PARKING SPACES LOCATED IN GARAGE, ON-STREET PARKING, ROADWAY, LANE STRIPING AND FOR CROSSWALKS.
17. A MINIMUM OF TWO TREES PER LOT SHALL BE CONSERVED OR PLANTED IN THE FRONT YARD OF EACH LOT MEETING THE CITY OF PORTLAND'S ARBORICULTURAL SPECIFICATION AND STANDARD OF PRACTICE AND LANDSCAPE DESIGN GUIDELINES. DEVELOPER MAY CONTRACT FOR THE PLACEMENT OF LANDSCAPING, BUT SHALL REMAIN ULTIMATELY LIABLE TO THE CITY OF PORTLAND FOR FINANCIAL OBLIGATION FOR COMPLIANCE WITH CITY ORDINANCES AND APPROVALS. SUCH FINANCIAL OBLIGATION SHALL BE NEITHER TRANSFERRABLE NOR WAIVABLE BY THE DEVELOPER.

NOTES

DIG HOLE AT LEAST 2 TIMES THE WIDTH OF ROOT BALL AND AS DEEP AS THE ROOT BALL (NO DEEPER). SET ROOT BALL CENTERED, WITH TOP AT GROUND LEVEL OR SLIGHTLY HIGHER. CORRECT HOLE DEPTH AS NEEDED.

FOR DECIDUOUS AND NEEDLED EVERGREEN TREES AND SHRUBS 1 FULL WHEELBARROW EXISTING SOIL, 2 SHOVELS PEAT, 1 SHOVEL WELL ROTTED MANURE, OR OTHER COMPOSTED ORGANIC MATERIAL FOR BROADLEAVED EVERGREENS AND RELATED ERICACAE PLANTS. 1 FULL WHEELBARROW EXISTING SOIL, 3-4 SHOVELS PEAT, 1 SHOVEL WELL ROTTED MANURE, OR OTHER COMPOSTED ORGANIC MATERIAL OF LOW pH (RECOMMENDATIONS ARE FOR ACCEPTABLE PLANTING AREAS).

CONTAINER GROWN STOCK: REMOVE CONTAINER PROTECTING ROOT BALL. GENTLY COMB OUT ROOTS. PRUNE DAMAGED ROOTS.

BACKFILL 2/3 OF HOLE WITH AMENDED SOIL THEN FILL HOLE WITH WATER. LET DRAIN. REPEAT WATER AND DRAIN. BACK FILL TO FINISH GRADE. TAMP GENTLY, AND CREATE EARTH SAUCER. WATER THOROUGHLY ONCE AGAIN TO REMOVE REMAINING AIR POCKETS.

2" X 2" OF 2 1/2" DIAMETER STAKES WITH 2 #12 GAUGE WIRES ENCASED IN 2-PLY REINFORCED RUBBER HOSE 1/2" DIAMETER OR CHAINLOCK AS APPROVED BY LANDSCAPE ARCHITECT. 2 STAKES LOCATED 180° APART (STAKES SHALL BE FIRMLY SET TO PROVIDE NECESSARY TENSION.

GENERAL PLANTING NOTES

1. CALL DIG-SAFE (1-888-344-7233) PRIOR TO BEGINNING WORK. THE LANDSCAPE CONTRACTOR IS ADVISED OF THE PRESENCE OF UNDERGROUND UTILITIES AND SHALL VERIFY THE EXISTENCE AND LOCATION OF SAME BEFORE COMMENCING AND DIGGING OPERATIONS. THE LANDSCAPE CONTRACTOR SHALL REPLACE OR REPAIR UTILITIES PAVING, WALKS, CURBING, ETC. DAMAGED IN PERFORMANCE OF THIS JOB AT NO ADDITIONAL COST TO OWNER.
2. CONTRACTOR SHALL THOROUGHLY FAMILIARIZE HIMSELF WITH ALL SITE CONDITIONS PRIOR TO CONSTRUCTION BIDDING.
3. DO NOT SCALE FROM DRAWINGS. ANY OMISSIONS IN DIMENSIONING SHALL BE REPORTED IMMEDIATELY TO THE LANDSCAPE ARCHITECT. ANY DISCREPANCIES BETWEEN DRAWINGS, DETAILS, NOTES AND SPECS SHALL BE IMMEDIATELY REPORTED TO THE LANDSCAPE ARCHITECT FOR FURTHER DIRECTION AND RESOLUTION BEFORE ANY ADDITIONAL WORK PROCEEDS.
4. PROVIDE SMOOTH TRANSITION WHERE NEW WORK MEETS EXISTING CONDITIONS.
5. CONTRACTOR SHALL FURNISH AND PLACE 12 INCHES OF LOAM IN ALL SHRUB BEDS, 30 INCHES IN ALL TREE PITS, AND 6 INCHES UNDER ALL TURF AREAS. THE LANDSCAPE CONTRACTOR SHALL COORDINATE SUBGRADE PREPARATION WITH THE GENERAL CONTRACTOR PRIOR TO PLACING LOAM.
6. ALL PLANT MATERIAL INSTALLED SHALL MEET THE SPECIFICATIONS OF "AMERICAN STANDARDS FOR NURSERY STOCK BY THE AMERICAN ASSOCIATION OF NURSERYMEN".
7. ALL PLANT MATERIAL SHALL BE FREE FROM INSECTS AND DISEASE.
8. ALL PLANTING SHALL BE DONE IN ACCORDANCE WITH ACCEPTABLE HORTICULTURAL PRACTICES. THIS IS TO INCLUDE PROPER PLANTING MIX, PLANT BED AND TREE PIT PREPARATION, PRUNING, STAKING OR GUYING WRAPPING, SPRAYING, FERTILIZATION, PLANTING AND ADEQUATE MAINTENANCE UNTIL ACCEPTANCE FROM THE OWNER.
9. ALL GRASS, OTHER VEGETATION AND DEBRIS SHALL BE REMOVED FROM ALL PLANTING AREAS PRIOR TO PLANTING.
10. EXISTING TREES TO BE PRESERVED SHALL BE PROTECTED DURING CONSTRUCTION AND SHALL BE THE RESPONSIBILITY OF THE GENERAL CONTRACTOR.
11. ALL SHRUB BEDS AND TREE PITS SHALL BE MULCHED WITH 3" CLEAN SHREDDED BLACK MULCH.
12. ANY DEVIATION FROM THE LANDSCAPE PLAN, INCLUDING PLANT LOCATION, SELECTION, SIZE, QUANTITY, OR CONDITION SHALL BE REVIEWED AND APPROVED BY THE OWNER AND LANDSCAPE ARCHITECT (AND MUNICIPAL AUTHORITY, IF APPLICABLE) PRIOR TO INSTALLATION ON SITE.
13. WHERE INDICATED ON PLAN, PLANTING SOIL MIXTURE FOR GROUND COVER AND PERENNIAL BED AREAS SHALL CONSIST OF FOUR PARTS TOPSOIL, TWO PARTS SPHAGNUM PEAT MOSS, AND ONE PART HORTICULTURAL PERLITE BY VOLUME. PEAT MOSS MAY BE SUBSTITUTED WITH WELL-ROTTED OR DEHYDRATED MANURE OR COMPOST. ROTOTILL BEDS TO A DEPTH OF 8 INCHES.
14. DAMAGE TO EXISTING SITE IMPROVEMENT DURING INSTALLATION OF LANDSCAPE MATERIAL SHALL BE THE RESPONSIBILITY OF THE LANDSCAPE CONTRACTOR.

GENERAL NOTES

1. ALL CONCRETE SHALL BE A CLASS "A" AND HAVE A MINIMUM ULTIMATE STRENGTH OF 4000 lbs. PER SQ. INCH AT THE END OF 28 DAYS, UNLESS OTHERWISE NOTED.
2. PRECAST REINFORCED CONE BARREL MANUFACTURE PER ASTM SPEC. C-478-67
3. SEWER BRICK TO CONFORM TO ASTM SPEC. DESIGNATE ON C-32-63, GRADE MA AND SA.
4. ALL MANHOLES SHALL HAVE A BITUMINOUS WATERPROOFING APPLIED TO THE EXTERIOR SURFACE. IF CONSTRUCTION OF BRICK MASONRY, THE SMOOTH MORTAR SURFACE SHALL BE PLASTERED WITH A SMOOTH MORTAR FINISH 3/8" THICK. AFTER THE MORTAR HAS SET, THE SURFACE SHALL BE WATERPROOFED AS REQUIRED BY SUPPLEMENTAL SPECIFICATIONS SECTION 604.
5. CASTINGS SHALL CONFORM TO ASTM DESIGNATION A48-CLASS 35. ALL PARTS OF CASTINGS, EXCEPT FINISHED SURFACE, SHALL RECEIVE A COAT OF COAL TAR PITCH VARNISH OR ASPHALTUM PAINT WHICH SHALL BE SMOOTH AND TOUGH BUT NOT BRITTLE.
6. MANHOLES MAY BE CONSTRUCTED OF MASONRY, PRECAST REINFORCED CONCRETE, OR CAST IN PLACE.
7. ALL PRECAST MANHOLES AND CATCH BASINS SHALL BE IDENTIFIED BY STATION AND OFFSET, PAINTED ON THE SIDE OF THE STRUCTURE BY THE MANUFACTURER.
8. STORM AND SEWER MANHOLES SHALL HAVE SOLID COVERS WITH ONE DRILLED HOLE.
9. EXISTING MANHOLE AND CATCH BASIN FRAMES AND COVERS SHALL BE SALVAGED BY THE CONTRACTOR, AND REMAIN THE PROPERTY OF THE CITY OF PORTLAND.
10. INLET HOODS SHALL BE PROVIDED WITHIN ALL CATCH BASIN PIPES 18" OR LESS.

I. Erosion Control Measures and Site Stabilization

The primary emphasis of the erosion/sedimentation control plan to be implemented for the infrastructure construction is as follows:
- Development of a careful construction sequence.
- Rapid revegetation of denuded areas to minimize the period of soil exposure.
- Rapid stabilization of drainage paths to avoid rill and gully erosion.
- The use of on-site measures to capture sediment (silt fence, check dams, etc.).

The following temporary and permanent erosion and sediment control devices will be implemented as part of the site development. These devices shall be installed as indicated on the plans or as described within this report. For further reference, see the Maine Erosion and Sediment Control Handbook for Construction: Best Management Practices.

A. Temporary Erosion Control Measures

The following measures are planned as temporary erosion/sedimentation control measures during construction:

1. Utilize the existing entrance to the site closest to Chestnut Street to access the site during construction until the proposed access driveways have been constructed.

2. Siltation fence or wood waste compost berms shall be installed downstream of any disturbed areas to trap runoff borne sediments until adequate catch (90% or greater) has occurred. The silt fence and/or the wood waste compost berms shall be installed per the details provided in this package and inspected immediately after each rainfall and at least daily during prolonged rainfall. Repairs shall be made if there are any signs of erosion or sedimentation below the fence or berm line. If there are signs of undercutting at the center or the edges, or impounding of large volumes of water behind fence or berm, the barrier shall be replaced with a stone check dam. Wood waste compost berms are not to be used adjacent to wetland areas that are to be left undisturbed.

3. Straw or hay mulch including hydroseeding is intended to provide cover for denuded or seeded areas until revegetation is established. Mulch placed between April 15th and September 15th on slopes of less then 15 percent shall be anchored by applying water; mulch placed on slopes of equal to or steeper than 15 percent shall be covered by a fabric netting and anchored with staples in accordance with manufacturer's recommendation. Mulch placed between September 15th and April 15th on slopes equal to or steeper than 8 percent shall be covered with a fabric netting and anchored with staples in accordance with the manufacturer's recommendations. Slopes steeper than 2:1 and the drainage swale located in the I-295 Right-of-Way that are to be revegetated shall receive Curlex blankets by American Excelsior or Engineer approved equivalent. Mulch application rates are provided in Attachment A of this section. Mulch shall not be placed over snow.

4. Temporary stockpiles of stumps, grubbings, or common excavation will be protected as follows:

a) Temporary stockpiles shall not be located within 100 feet of any wetlands that are to be left undisturbed and any slopes exceeding 15%.

b) Stockpiles shall be stabilized within 7 days by either temporarily seeding the stockpile with a hydroseed method containing an emulsified mulch tackifier or by covering the stockpile with mulch.

c) Stockpiles shall be surrounded by silt fence or wood-waste compost berms at the time of formation.

5. All denuded areas within 100 feet of an undisturbed wetland that have been rough graded and are not located within a roadway subbase area shall receive mulch or erosion control mesh fabric within 7 days of initial soil disturbance. All areas within 50 feet of undisturbed wetland area shall be mulched prior to any predicted rain event regardless of the 7-day window. In other areas, the time period may be extended to 14 days. All disturbed areas located within 100 feet of a protected natural resource must be protected with a double row of sediment barriers.

6. For work conducted between September 15th and April 15th of any calendar year, all denuded areas will be covered with hay mulch applied at twice the normal application rate and anchored with fabric netting. The time period for applying mulch as noted in Paragraph I.A.5 shall be limited to 7 days for all areas.

7. Marginal Way shall be swept to control off-tracking of mud, debris, and dust as necessary.

8. During grubbing operations stone check dams will be installed at any evident concentrated flow discharge points.

9. Silt fencing with a maximum stake spacing of 6 feet should be used, unless the fence is supported by wire fence reinforcement of minimum 14 gauge and with a maximum mesh spacing of 6 inches, in which case stakes may be spaced a maximum of 10 feet apart. The bottom of the fence should be anchored.

10. Wood waste compost/bark berms may be used in lieu of siltation fencing. Berms shall be removed and spread into a layer not to exceed 3" thick once upstream areas are completed and a 90% catch of vegetation is attained. Wood waste erosion tubes may also be used for perimeter sediment control or check dams, or to reduce slope lengths. These tubes may be created by filling Filtrexx mesh tubes or approved equivalent with wood waste material and staking the tube to the ground where the control is necessary.

11. Inlet Protection measures shall be implemented for all catch basins located with the disturbed construction area. Measures shall be maintained regularly and shall not cause flooding in public right-of-ways.

12. Water shall be furnished and applied in accordance with MDOT specifications – Section 637 – Dust Control.

13. Loam and seed is intended to serve as the primary permanent revegetative measure for all denuded areas not provided with other erosion control measures such as riprap. Application rates are provided in Attachment A of this section. Seeding shall not occur over snow.

B. Permanent Erosion Control Measures

The following permanent erosion control measures have been designed as part of the Erosion and Sedimentation Control Plan:

1. All areas disturbed during construction but not subject to other restoration (building, paving, riprap, etc.) shall be loamed, limed, fertilized, mulched, and seeded. Fabric netting anchored with staples shall be placed over the mulch in areas as noted in Paragraph I.A.3. All disturbed areas within 100 feet of an undisturbed wetland area shall be mulched prior to any predicted rain event regardless of the 7-day window. Native topsoil shall be stockpiled and reused for final restoration if deemed to be of sufficient quality.

II. Implementation Schedule

The following construction sequence shall be required to insure that the effectiveness of the erosion and sedimentation control measures is optimized:

Note: For all grading activities, the contractor shall exercise extreme caution not to overexpose the site by limiting the disturbed area.

1. Install perimeter siltation fence and/or wood waste berms prior to grubbing respective areas.
2. Clear and grub area as necessary for construction.
3. Remove existing pavement within work limits.
4. During grubbing operations, install stone check dams at any evident concentrated flow discharge points.
5. Commence earthwork operations for proposed driveways and apartment foundations.
6. Continue grading to subgrade as necessary.
7. Commence installation of underground utilities.
8. Complete remaining earthwork operations.
9. Install subbase and base course gravels for driveways.
10. Complete installation of utility appurtenances.
11. Install surface course gravels for the driveways.
12. Loam, lime, fertilize, seed, and mulch remaining disturbed areas.
13. Remove accumulated sediment from ahead of any sediment barriers as necessary.
14. Once the site is stabilized and a 90% catch of vegetation has been obtained, remove all temporary erosion control measures.
15. Touch up loam and seed.

Note: All denuded areas not subject to final paving, riprap, or gravel shall be revegetated.

Prior to construction of the project, the contractor shall submit to the owner a schedule for the completion of the work, which will satisfy the following criteria:

1. The above construction sequence shall generally be completed in the specified order; however, several separate items may be constructed simultaneously. Work must also be scheduled or phased to prevent the extent of the exposed areas as specified below. The intent of the above sequence is to provide for sufficient erosion and sedimentation control and to have structural measures such as silt fence and construction entrance in place before large areas of land are denuded.

2. The work shall be conducted in sections which will:

a) Limit the amount of exposed area to those areas in which work is expected to be undertaken during the proceeding 30 days.

b) Revegetate disturbed areas as rapidly as possible. All areas shall be permanently stabilized within 7 days of final grading or before a storm event, or temporarily stabilized within 7 days of initial disturbance of soil for areas within 100 feet of an undisturbed wetland area and within 14 days for all other areas. Areas within 100 feet of an undisturbed wetland shall be mulched prior to any predicted rain event regardless of the 7-day window.

III. Winter Stabilization Plan

If a summer/fall construction schedule is not possible and construction is necessary between September 15th and April 15th of any calendar year, the contractor shall submit a schedule, which will satisfy the following criteria:

1. The extent of exposed area shall be limited to those areas in which work is expected to be undertaken during the proceeding 15 days and can be mulched in the event of a predicted snow event.

2. All disturbed areas shall be covered with mulch within 7 days of final grading. Mulch shall not be placed over snow.

3. Once final grade has been established, the contractor may choose to dormant seed the disturbed areas prior to placement of mulch and placement of staple-anchored fabric netting.

a. If dormant seeding is used for the site, all disturbed areas shall receive 6" of loam and seed at an application rate of 5 lbs. per 1000 s.f. Seeding shall not occur over snow.

All areas seeded during the winter months shall be inspected in the spring for adequate catch. All areas insufficiently vegetated (less than 80% catch) shall be revegetated by replacing loam, seed, and mulch as necessary to achieve 80% catch.

b. If dormant seeding is not used for the site, all disturbed areas shall be revegetated in the spring.

4. The area of denuded non-stabilized construction area shall be limited to the minimum area practicable. An area shall be considered denuded until the subbase gravel is installed or the areas of future loam and seed have been loamed, seeded, and mulched at a rate twice that specified in the seeding plan (e.g. 115 lbs. per 1,000 s.f. x 2 = 230 lbs. per 1,000 s.f.).

5. The above schedule shall be subject to the approval of the Owner.

The Contractor shall install any added measures that may be necessary to control erosion and sedimentation from the site dependent upon the actual site and weather conditions.

The Contractor shall note that no areas within 100 feet of an undisturbed wetland shall remain denuded for longer than 7 days before being temporarily stabilized. All other areas shall be stabilized within 14 days. For construction between September 15th and April 15th of any calendar year, all areas shall be temporarily stabilized within 7 days.

IV. Inspection and Maintenance

The following inspection and maintenance standards shall be required to insure the effectiveness of the erosion and sedimentation control measures are optimized during construction.

For further reference, see the Maine Department of Environmental Protection Chapter 500 Stormwater Management Rules and the Maine Construction General Permit (MCGP) requirements.

1. Inspect disturbed and impervious areas, erosion control measures, materials storage areas exposed to precipitation and locations where vehicles enter or exit the site. Inspection should occur at least once a week as well as before and after a storm event, and prior to completing permanent stabilization measures.

2. Maintain all erosion and stormwater control measures until areas are permanently stabilized. If maintenance, modification, and/or installation of additional best management practices (BMPs) are necessary, implementation must be completed within 7 calendar days and prior to any storm event.

V. Housekeeping

The following standards shall be required. For further reference, see the Maine Department of Environmental Protection Chapter 500 Stormwater Management Rules.

1. Spill prevention controls must be utilized to prevent pollutants from being discharged from materials onsite.

2. During construction, liquid petroleum products and other hazardous materials with the potential to contaminate groundwater may not be stored or handled in areas of the site draining to an infiltration area or adjacent to the stormwater catch basins and drain manholes.

3. Action must be taken to ensure activities do not result in noticeable erosion of soils or fugitive dust emissions during or after construction.

4. Litter, construction debris, and chemicals exposed to stormwater must be prevented from becoming a pollutant source.

5. Water collected as a result of trench dewatering must be spread through natural wooded buffers or removed to areas that are specifically designed to collect the maximum amount of sediment possible, like a cofferdam sedimentation basin. Avoid allowing the water to flow over disturbed areas of the site.

6. Identify and prevent contamination by non-stormwater discharges.

7. Additional requirements may be applied on a site-specific basis.

NOTES:

1. OWNER OF RECORD: CITY OF PORTLAND. CCRD 1791/446
2. PARCEL IS SHOWN AS LOT 1 BLOCK B ON CITY OF PORTLAND ASSESSORS TAX MAP 34 A.
3. THE UNDERGROUND UTILITIES SHOWN HAVE BEEN LOCATED FROM FIELD SURVEY INFORMATION AND EXISTING DRAWINGS. THE SURVEYOR MAKES NO GUARANTEES THAT THE UNDERGROUND UTILITIES SHOWN COMPRISE ALL SUCH UTILITIES IN THE AREA, EITHER IN SERVICE OR ABANDONED. THE SURVEYOR FURTHER DOES NOT WARRANT THAT THE UNDERGROUND UTILITIES SHOWN ARE IN THE EXACT LOCATION INDICATED ALTHOUGH HE DOES CERTIFY THAT THEY ARE LOCATED AS ACCURATELY AS POSSIBLE FROM INFORMATION AVAILABLE. THE SURVEYOR HAS NOT PHYSICALLY LOCATED THE UNDERGROUND UTILITIES. CALL 1-888-DIGSAFE AT LEAST THREE BUSINESS DAYS BEFORE PERFORMING ANY CONSTRUCTION.
4. ELEVATIONS BASED ON NGVD 1929.
5. OWEN HASKELL, INC. SURVEY DOES NOT INCLUDE DATA BEHIND CURBLINE TO THE SOUTH OF MARGINAL WAY AND TO THE WEST OF PREBLE STREET EXTENSION. THIS DATA IS APPROXIMATE AND HAS BEEN ADDED TO THESE SITE PLANS FOR CONTEXT INFORMATION.

PLAN REFERENCES:

1. "BOUNDARY SURVEY OF PROPERTY ALONG MARGINAL WAY AND PREBLE STREET" PREPARED BY PORTLAND DPW ENGINEERING SECTION, DATED DECEMBER 10, 2003.
2. "BOUNDARY + TOPOGRAPHIC SURVEY" ON MARGINAL WAY, PORTLAND MAINE MADE FOR MITCHELL + ASSOCIATES, DATED MARCH 11, 2005.

CERTIFICATION:

OWEN HASKELL, INC. HEREBY CERTIFIES THAT THIS PLAN IS BASED ON, AND THE RESULT OF, AN ON THE GROUND FIELD SURVEY AND THAT TO THE BEST OF OUR KNOWLEDGE, INFORMATION AND BELIEF, IT CONFORMS TO THE BOARD OF LICENSURE FOR PROFESSIONAL LAND SURVEYORS CURRENT STANDARDS OF PRACTICE.
