This is NOT a permit, you may not commence ANY work until the permit is issued. If you are in a Historic District you may be subject to additional permitting and fees with the Planning Department on the 4th floor of City Hall

MANUAL VENTING SKYLIGHT

Skylight opens via a telescopic rod when out of reach or a crank handle when in reach.

VS®

- With a VELUX Model VS venting manual skylight, any home can embrace the best of what nature has to offer. Opening for maximum fresh air, the VS contributes to a home's proper moisture balance and comfort level by allowing stale, humid air to be released. This is an especially important feature for installations in kitchens, baths, laundry rooms, and pool enclosures.
- Smooth-turning handle is available when the skylight is installed within reach.
 - Blinds and rods are available (see pages 22-23).
 - Comes with a select wood frame and sash, insect screen (pre-installed), and aluminum or copper cladding.
 - Choice of Comfort Plus or ComfortPlus insulated glass when out of reach.

Perfect for kitchens, baths or any room where moist, stale air needs to be released.

An insect screen is included with the Model VS for protection when the skylight is open.

VS INSTALLATION PITCH

Proposed Work To Be Completed:

*Remove existing door on the second floor ell, west side of building (see exhibit 1 photo G) and replace with a "Broscos" all wood, double-hung, 6 over 1, window. Originally, there was a window in this location, which was changed to a door to accommodate a fire escape (which has since been removed). The original lintel is still in place and a wood sill will be added, in keeping with all the other windows of the house. The window will be approximately 34" x 60", which is the same size as the existing windows on this side of the building. The bottom part of the opening will be filled in with a matching brick.

* Remove existing door on the third floor of the townhouse, south side of building (see exhibit 1 photo C) and replace with a "Broscos" all wood, double-hung, 6 over 1, window. Originally, there was a window in this location, which was changed to a door to accommodate a fire escape (which has since been removed). The original lintel is still in place and a wood sill will be added, in keeping with all the other windows of the house. The window will be approximately 34" x 45", which is the same size as the existing windows on this floor of the building. The bottom part of the opening will be filled in with a matching brick.

*Remove brickwork on third floor of the townhouse, south side of the building (see exhibit 1 photo C) and Install a "Broscos" all wood, double-hung, 6 over 1 window which is in keeping with the size and style of all the other windows on the this floor (approximately 34" x 45"). A cement lintel and wood sill will be installed in keeping with all the other windows of the house. Although it appears no window existed in this location, this window lines up with, and compliments the symmetry of the windows on the 2 floors below it.

*Remove old asphalt roofing shingles and re-shingle the roof with a charcoal colored, "slate-line", three-tab, asphalt shingle which will be consistent with my neighbor. The existing skylight will be removed and replaced by 4 Velux, low-profile, venting skylights (Model VS 304 – dimensions: 30.5" x 38.5" - see exhibit 2). The new skylights will cover an area that is 16" longer and 12" wider than the space occupied by the existing skylight. In conjunction with the roofing work, we propose to remove rotted gutters and replace with continuous copper gutters of a similar profile. Rotted wood soffit and fascia boards will also be replaced with like kind as well as the distressed wood detail under the eaves (see exhibit 1 photo B).

*Tear down the 2 chimneys below the roof line and rebuild them to their original size and character (see exhibit 1 photo B). Most of the chimneys on the east side of the block have been restored and we intend to use these chimneys as an example (see exhibit 1 photo F).

*Remove chain-link fence in the back of the property (Clark Street) and replace with same iron fencing used in the front of the building (see exhibit 1 photo A).
