January 18, 1961.

Mr. Carroll Newman
Box 925
Portland, Maine.

Dear Mr. Newman:

Upon inspection of the above job on January 16, 1961, the following defect was found:

---Chimney is not anchored to wall. Building Code requirements provide that an outside chimney be anchored to the wall every 10 feet in height.

It is important that correction of this condition be made before January 31, 1961, and notification be given this office of readiness for another inspection.

If additional information relative to the above is desired, please phone Inspector Earle Smith at 4-2221, extension 234, any week day but Saturday between 8:00 and 9:00 A.M.

Very truly yours,

ESS/jg

CITY OF PORTLAND, MAINE
DEPARTMENT OF BUILDING INSPECTION

Julia Maloney
17 W. Kidder St.
Portland Maine

May 2, 1960

Dear Madam:

With relation to permit applied for to demolish a building or portion of building at 218 Washington Ave. it is unlawful to commence demolition work until a permit has been issued from this department.

Section 6 of the ordinance for rodent and vermin control provides: "It shall be unlawful to demolish any building or structure unless provision is made for rodent and vermin eradication. No permit for the demolition of a building or structure shall be issued by the Building Inspector until and unless provisions for rodent and vermin eradication have been carried out under supervision of a pest control operator registered with the Health Department.

The building permit for demolition cannot be issued until the provisions of this section have been satisfied. It is the obligation of owner or demolition contractor or both to take up with the Health Department the matter of complying with this section, being prepared to inform that department what registered pest control operator is to be employed.

Very truly yours,

Albert J. Sears

Albert J. Sears
Inspector of Buildings

AJS/jg

Eradication of this building has been completed.

5/2/60 Chris OK

Memorandum from Department of Building Inspection, Portland, Maine

218 Washington Avenue—Enlarging window opening for Julia J. Halcyon by Joseph Shortill, contractor—5/3/43

The application states that the lintel over the enlarged opening is to consist of 2-3x4 angles without indication of the gauge or thickness of the steel angles. When the size of an angle is written 3x4, it is usually taken to mean that the 3-inch leg is to be set upright, but this makes the strength of the angle less than 2/3 of the strength if the 4-inch leg were set upright.

In the design of this lintel, it is of course allowable to consider only the usual triangle of brickwork over the opening unless this triangle is broken into by windows or other openings in the wall, but it is assumed that the designer has taken into account any first floor loads that may come within the scope of this triangle.

In the absence of more detailed information, we must rely entirely upon the statement of design signed by Mr. Gero of E. Coroy & Company not only that the lintel will be strong enough and properly placed to hold up the loads without breaking, but stiff enough to prevent any deflection or sag which might crack the brickwork.

Julia Maloney
218 Washington Avenue

Subject: Amendment to building permit at
218 Washington Avenue, the amendment to
cover construction of the reinforced con-
crete platform about 5'6" by 11 feet and
concrete steps leading from the new plat-
form to the ground.

Dear Madam & Gentlemen:

Approved amendment is issued herewith to the contractor, subject to the following:

1. The design plan of the reinforced concrete platform has been revised to show the gross depth of the slab five and one-half inches instead of three and one-half and to show the underside of the reinforcing bars three-quarters of an inch above the bottom of the concrete slab; also the reinforcement has been redesigned, calling for one-half inch in diameter bars spaced six inch from center to center and running the long way of the slab. This works out all right, but when I was up there looking over the job I found that the contractor had laid the reinforcing bars in some places flat on the form, so that there was no space for the concrete to fill in beneath the bars. All of these reinforcing bars are to be wedged up so that the bottom of the bars will be no closer than three-quarters of an inch to the upper surface of the bottom of the concrete form and held in that position while the concrete is being poured.

2. There is still no competent detail on the plan to show what is to be done where the new platform adjoins the side of the wooden dwelling. Unless great care is exercised here, the moisture will enter between the concrete slab and the side of the wooden building and deteriorate the woodwork rapidly.

3. Neither contractor nor designer has told me how it was proposed to build the concrete steps. It becomes obvious that if the steps are to be built on a sloping slab supported on fill between the row walls, that the fill will have to be well compacted and then the concrete will have to be made of "stiff" consistency. If it should be decided to make these steps of reinforced concrete, then detailed plans of the design should be filed here with the designer's statement of design before going ahead with that part of the work. Note that the foundation of the steps and the platform at the top of it is to extend at least four feet below the finished surface of the ground.

4. The 6x8 beam shown on the plan across over the space beneath the rear portion of the building and beneath the new platform must be set with the eight inch dimension upright.

Very truly yours,

Inspector of Buildings

Mr. Walter H. Libby
54 Dalton Street
Julia Maloney
118 Washington Avenue

Subject: Application for amendment
to building permit to cover re-
inforced concrete platform at
218 Washington Avenue.

Dear Madam & Gentlemen:

We are unable to reconcile the architect's plan with the statement of work on the application. Application shows replacement of wooden platform 11 feet square with reinforced concrete platform. Plan shows reinforced platform about 5'-6" by 11 feet, apparently a cellar under the platform, and possibly an extension of present building with extension of cellar.

It is necessary that plans show clearly distinction between existing and proposed work.

Show whether 6x8 beam construction and pipe columns are proposed and, if so, what loads from the building they will support as to height of outside wall, roof and floors. Pipe column less than 4 inches in outside diameter is not allowable to support main building unless such as Lally or Deane. If cellar not to be excavated why not use masonry up to surface of ground?

Show details of steps. Are they to be of concrete or wood? If concrete, show whether mass concrete or reinforced and how to be constructed. If proposed of wood show framing details. In any case foundation of steps to extend at least four feet below grade.

Show details where reinforced slab joins wall of main building.

Show spacing of strength rods above bottom of concrete slab thus to show effective depth of slab. Please show for what live load per square foot the slab is designed and give us design computations.

Very truly yours,

Inspector of Buildings

July 11, 1946

Mr. Walter H. Libby
34 Dalton Street
Miss Julia Maloney
218 Washington Avenue

Subject: Building permit to construct new foundation under dwelling house at 218 Washington Avenue

Dear Madam & Sir:

With reference to my letter of July 9, Mr. Libby has now made the application over so that it merely reads: "To replace present cedar post foundation with concrete foundation", and therefore this is all of the work that is included in the permit.

The original sketch filed shows eight inch brick walls around the building which, I presume, must represent the intended underpinning, since from the atlas it appears that the building is of frame construction. The application for the permit, however, says that the concrete foundation wall is to extend upward to the underside of the sill instead of having a brick underpinning. It is immaterial which you do as long as the required thicknesses of foundation are maintained, the foundation wall extends at least four feet below the finished surface of the ground and the under side of the sill is no less than six inches above the finished surface of the ground.

There is no information on the application or plan to show whether or not the ground may slope off downward from Washington Avenue, so that we cannot check this feature of the height of the underpinning above the finished surface of the ground in the rear of the building. The contractor will have to see to it that this is all right.

Neither has been shown what is to be done about extending the chimney downward and providing a foundation for it and providing a lining for the extension downward, whether the present chimney is lined or not. No indication as to what is to be done about supports for the wooden girders running under the first floor which is the usual situation. It would be for the best interests of the owner to file all this information here before the work progresses very far as the provisions of the Building Code as to strength, foundation, size and supports of the girder, material of them, spacing of them, etc., etc. must be observed whether the information has been filed here and checked or not.

Normally I am expected to withhold this permit until full compliance with the Building Code in all particulars is shown on application or by plan. If you are both willing to cooperate by furnishing the lacking information and having it checked before proceeding with any of the concrete work perhaps time can be saved all around. Otherwise any departure from Building Code requirements will have to be made good at the owner's expense and we might have to stop the work to get such correction.

Very truly yours,

Inspector of Buildings

July 9, 1946

Julia Maloney
218 Washington Avenue
Walter H. Libby
34 Dalton Street

Subject: Application for building permit to make
alterations at 218 Washington Avenue

Dear Madam & Sir:

Neither Mr. Libby's application nor the rough sketch with it is understandable.

Section 106b of the Building Code directs that no building permit shall be issued until the information concerning it has been received and complies with the requirements of the Building Code.

The burden of furnishing this information is always on the applicant, and until we receive detailed information which shows compliance with the Building Code the building permit cannot be issued.

It will be necessary to have some one who understands the making of plans to file a plan of the proposed work here and that party should be thoroughly experienced in the design of reinforced concrete, should show the details of reinforced concrete and the reinforcement proposed and should add to the plans his signed statement of design as called for by Section 104b3 of the Building Code.

If you are unwilling to furnish information competent to show compliance with the law, if Mr. Libby will return the receipt for the fee paid to this office, the money will be refunded by voucher.

Very truly yours,

Inspector of Buildings

Re: 218 Washington Avenue - damaged as a result of auto accident 3-1-89,
Second Floor.

Dear Mr. Maloney:

As a result of an accident, an inspection was performed at your property to determine the extent of damage to building.

It was noted that the right front corner post is damaged and ruptured from sill to top plate of Second Floor; damaged headers, sole plate and sill, top and bottom plate, Second Floor; damaged lintel, door frame, door and jack posts, damaged studs and wall, exterior and interior vestibule. Electrical service box is damaged and wires pulled at Right Front wall.

As instructed by me on 3-2-89, a building permit will be required to perform this work.

If we can be of any further service to you, please don't hesitate to call us at City Hall, 874-8300, Ext. 8709.

We thank you for your co-operation.

Sincerely yours,

Arthur Addato
