Gentlemen:

Building permit for alterations in warehouse at above named location to provide space for manufacturing is issued herewith based on plan filed with application for permit, but subject to the following conditions:

1. Separate permits issuable only to the actual installers are required from this department for the mechanical ventilation of paint spray room and for the extension of the sprinkler system to cover the areas where there are to be new lowered ceilings. *(Miller Bell)*
- O.K.* 2. Information is to be furnished this department as to material of paint room ceiling and its supports before installation is made.
- O.K.* 3. Exit signs adequate in number and location to show location of emergency means of egress through door No. 3 are to be provided in all of the rooms involved.
- O.K.* 4. The 9 inch Sonotube piers for emergency exit platform are to extend at least 4 feet below grade. The 6x6 sills are to be anchored to these piers. There is to be no step down other than the thickness of a usual threshold at the outswinging door at this location.
5. Check should be made with the City Plumbing Inspector to make sure that the size and type of windows to be installed for ventilation of toilet rooms are adequate to meet Plumbing Code requirements.

Very truly yours,

Albert J. Seaza  
Building Inspection Director

Mr. Albert J. Sears  
Building Inspector  
City of Portland

Dear "Al":

I certainly want to extend my personal thanks to you for your fine cooperation in the matter of expediting the Building Permit for Danforth/White, 180 Anderson Street, Portland.

Mr. Gordon White was very appreciative of your courtesy. You have made a real contribution to the City of Portland and to the work of this department.

Thanks again.

Sincerely yours,

*Ben*

Memorandum from Department of Building Inspection, Portland, Maine

170 Anderson St.—Permit for alterations in warehouse for General Electric Supply Co.  
by John Aaskov - 9/27/56

Permit for alterations in warehouse section of building at the above location is issued herewith based on revised plans filed September 26, 1956 and subject to adjustment of sprinkler system in building being made where necessary to accommodate the new partition arrangement.

AJS/G

Copy to Mr. John Aaskov

General Electric Supply Co.  
Attn. Mr. D. R. Pray  
170 Anderson Street

Copy to John Askov  
R.F.D. 1  
Cumberland Center, Me.

Gentlemen:-

Information furnished with application for permit for alterations to warehouse at the above location is not sufficient for us to determine whether work proposed is to comply with Building Code requirements, as we are required to do before issuance of any permit. Following are some of the details which appear to be in question:-

1. A plan is needed of the area where alterations are to take place showing locations of all partitions, new openings, etc. The building apparently has frontage on two streets and we are unable to determine which is front wall and which rear wall. One wall is apparently fairly close to the line of Cows Street and if a loading door is planned in that wall so that trucks will be backing up to it and standing within the area of a sidewalk if one were to be provided, there is a question of violation of a City Ordinance relating to such a situation.

2. Apparently the section of plan you have filed in connection with the new 12-foot wide opening gives details for an 8-foot wide opening. Lintel shown for this narrower opening no doubt is not adequate for the larger opening. Information is needed as to the size of lintel to be used and a statement of design (blank copy enclosed) signed by the person designing it is needed.

3. Section of plan which you have specified as showing canopy construction is for framing of platform. If any new platform is to be provided it will need to be framed as indicated of Heavy Timber Construction because of Fire District regulations. Change in size of platform may make changes in framing and support necessary.

4. Any canopies are required to be of incombustible construction throughout because of Fire District regulations and cannot be of wood construction as you have indicated.

While we wish to help you as much as possible in getting work started on this project, we certainly can do nothing with the piecemeal information furnished. Reference to old plans of the existing building is of no help since apparently sizes of openings, platforms and canopies are to vary from those existing thus making it necessary for construction details to be designed for the new conditions.

Very truly yours,

Albert J. Sears  
Deputy Inspector of Buildings

Attention: Mr. McDonald  
Building Inspector's Dept.

Gentlemen:

In reply to your recent letter regarding the installation of a hood over the stove in our lunch room, I wish to advise that we do not intend to do any deep frying on the surface units on this stove. Therefore, according to our conversation, the hood will not be necessary.

I trust this note will be sufficient for your records.

Yours very truly,  
  
H. T. Smith  
Operating Manager

Mr. H. T. Smith  
Dist. Operating Manager  
General Electric Supply Co.  
160 Anderson Street  
Portland, Maine

Dear Mr. Smith:-

York Electrical Company has made belated application for a permit to cover installation of the range in your new building at 160-182 Anderson Street.

In view of the omission of the hood required by the Building Code when such ranges are installed for the usual purposes, please let us have a letter with the written statement in it, which we talked about in July, worded as follows:

"The range installed for General Electric Supply Co., at 160-182 Anderson Street will never be used for cooking candy, or frying in deep fat or for any other purpose where a quick unfriendly fire is likely to take place."

Thus we will be able to issue the belated permit and clear the matter up.

Very truly yours,

Warren McDonald  
Inspector of Buildings

INSPECTION COPY

AP 160-182 Anderson Street

(heater)

May 2, 1932

Harris Oil Company  
202 Commercial Street  
General Electric Supply Co.,  
94 Commercial Street

Gentlemen:

Building permit is issued to Harris Oil, herewith, for installation of some type of auxiliary heater for a unique forced warm air heating system for the warehouse of the new General Electric building at 160-182 Anderson Street.

This appears to be all in order, although we may not fully understand the situation. It is understood that this heater is to set out in the open warehouse, to be connected to a special chimney constructed for it, to be fired by oil from the same outside underground tanks as the main heating plant, the burner at least being a General Electric burner.

Since the Building Code does not require a plant for heating the building to be enclosed in a fire-resistive room, the unusual feature is that there is a fire-resistive heater room, but this heater is to be outside of it.

While the clearances from the heater and from the smoke pipe to burnable material, as given on the application, are ample, if the heater is to be set in the open warehouse, it seems essential that some guards or barriers of some kind be used to keep combustible goods from being stored too near to the heater or, perhaps, in such a location and so high that combustible material might fall over on the heater.

While it is not certain whether or not the usual heavy oil is to be used in the main heating plant, presumably, if heavy oil is to be used and stored in the 2,000 gallon tank underground outside, the labelling by the Underwriters' of the particular oil burner to be used must indicate that use of the heavy oil is allowable and some type of pre-heater contemplated.

Very truly yours,

Warren McDonald  
Inspector of Buildings

Mr. H. H. Sweetser, 33 Green Street  
Berden, Maine  
Robert Fortier Const. Co., 65 Commercial St.

Permit for installation of a wet pipe automatic sprinkler system in the office and warehouse building under construction for the General Electric Supply Corporation at 160-182 Anderson Street, this City, is being issued hereunto to Mr. H. H. Sweetser, your local representative, based on revised plans filed February 4, 1952, but subject to the condition that sprinkler heads are to be provided below, as well as above, the ceiling of the heater room, heads at this location evidently having been omitted on the revised plans. There appears to be no reason why the heads should be left out of this room unless there is to be electrical or other equipment located there from which increased hazard would likely arise if water were discharged from the sprinkler system upon it.

Very truly yours,

Arthur McDonald  
Inspector of Buildings

Mr. E. W. Webster, 38 Green Street  
Cortland, Maine  
Robert Carrier Construction Company  
65 Commercial Street

Gentlemen:

The plan of the proposed automatic sprinkler system to be installed in the new office and warehouse building under construction for the General Electric Supply Corporation at 160-162 Anderson Street, this City, as filed with the application for permit for its installation, does not indicate complete enough coverage to comply with the requirements of our Building Code. Because of the size of the area of the entire building which is not subdivided by fire walls of 4-hour fire resistance, the type of construction used for the building is allowable only if a standard automatic sprinkler system is installed throughout.

Section 103e2 of the Building Code states in part that: "Where a building or part thereof is required to be sprinklered, the system shall cover and protect all spaces, concealed or otherwise, where the installation and maintenance is practicable, .....". While sprinkler heads are indicated on the plans filed both above and below the hung ceilings in the office section of the building, no heads are shown below the dropped ceilings in the warehouse section. It is clear that, in order to comply with Building Code requirements, sprinkler heads will need to be provided below all hung ceilings as is being done in the other section of the building. We shall be unable to approve a permit for installation of the system until plans showing heads at all such locations have been filed.

Very truly yours,

Warren McDonald  
Inspector of Buildings

January 24, 1952

General Electric Supply Company  
94 Commercial Street  
Harris Oil Company  
202 Commercial Street

Gentlemen:

The building permit to cover installation of two forced hot water heating systems and oil burning equipment for G. E. Supply Company at 160-182 Anderson Street is issued to Harris Oil Company subject to the following:

Section 602a2 of the Building Code provides that no more than one heating furnace or boiler shall be connected to a single flue except as specifically permitted by this Department.

Since application indicates that more than one heating furnace or boiler would be connected to this flue, approval is given at the owner's risk. If this situation should become dangerous from the standpoint of fire hazard or any other hazard, it would be the responsibility of the owner to make the situation permanently safe even though it may mean the construction of an additional chimney flue.

Very truly yours,

Warren McDonald

INSPECTION COPY

Signature of owner by:

*Jackson Reynolds*

Memorandum from Department of Building Inspection, Portland, Maine

160-182 Anderson Street--Installation of fuel oil storage tanks for General Electric Supply Corp. by Verrier Construction Co.

Before tanks and piping are covered from view, installer is required to notify Fire Department Headquarters of readiness for inspection and to refrain from covering up until approved by the Fire Department.

The tank of 1000 gallons capacity is required to be of steel or wrought iron no less in thickness than No. 12 gauge and the tank of 2000 gallons capacity no less than No. 7 gauge and before installation the tanks are required to be protected against corrosion, even though galvanized, by two preliminary coats of red lead and heavy coat of hot asphalt, or equivalent.

Pipe lines connected to underground tanks, other than tubing and except fill lines and test wells, must be provided with double swing joints arranged to permit the tank to settle without impairing the efficiency of the pipe connections.

Owner and installer will have to bear the responsibility for the structural capacity of the tank to support loads from above such as heavy motor trucks.

If tanks will be so located as to be subjected to the action of tide water or "ground" water, adequate anchorage or weighting must be provided to prevent "floating" when tank is empty or nearly so.
