Portland, Maine

Copies to: Mr. William J. Gagnon  
S. P. D. #1, Cumberland Center, Mr.  
Mr. George Lewis, 30 York Street

Gentlemen:

General construction permit for erection of a one story concrete block building 48' x 75' for store and warehouse purposes at 132-152 Anderson Street is issued herewith based upon revised plans and subject to the following conditions:

1. The permit is issued on the basis that the floor of the warehouse is to be one foot or more above the grade of the ground outside of it and that no ramp is to be provided outside the large door opening in the front wall of the building. Under such an arrangement and on the condition that motor vehicles will not be driven into the building under any circumstances, the enclosure of the heater and oil storage tank is to be omitted.
2. Upon completion of the building exit signs with letters at least six inches high showing red or green on a light colored background are to be provided over the door from the show room to the warehouse section and over the small door in the front wall of the warehouse section together with whatever directional signs as are necessary in the warehouse to show the location of the latter door.
3. All doors involved in a means of egress, including the entrance door to the show room, are to be equipped with vestibule latches so installed that they may always be opened in the direction of travel to reach out of doors without the use of a key and by merely turning the usual knob or by pressure on an ordinary thumb lever. No other type of lock, bolt or bar is allowable on these doors.
4. If wood strapping is to be used on any of the walls for fastening of finish material, fireproofing is to be provided between the strapping at the ceiling level.
5. The foundation of the front entrance platform is to extend at least four feet below grade and the canopy is to be constructed of incombustible material as indicated on the revised plans.
6. Spacing of studs of non-bearing partitions of office and sales room is ordinarily required to be no less than 16" on centers. However, where wood tongued and grooved sheathing is to be used and the sheathing is to be placed vertical, it is allowable to frame such partitions with continuous shoes against and fastened to floor and ceiling construction and with continuous upright studs in one length between shoes spaced not more than 48 inches on centers, horizontal members being provided at the same spacing between the upright studs and the sheathing nailed at all horizontal bearings and to uprights wherever possible.
7. Notification is to be given for an inspection by this department before any sheathing or wallboard is applied to walls, partitions or ceilings. When all essential work on the building has been completed, a final inspection will be made by this department upon notification that everything is in readiness and if, everything is found in compliance with law at this time, the certificate of occupancy, without issuance of which use of the building is unlawful, will be issued.

Very truly yours,

Inspector of Buildings

Portland, Maine

Copies to: Mr. George Lewis, 30 York Street  
Mr. William J. Gannon, R. F. D. #1,  
Cumberland Center, Maine  
Lessee for architect

Gentlemen:

A check of the plans filed with the application for permit for construction of a one story concrete block building 15' x 75' for store and warehouse purposes at 132-152 Anderson Street raises the following questions as to compliance with Building Code requirements:

1. We understand from Mr. Chipman that you do not plan to drive motor vehicles into the building through the large door opening in the front wall of the building either for loading or unloading purposes or for storage overnight. Since the threshold of the doorway is to be at grade level and doorway is to be large enough to admit motor vehicles, it appears inevitable that on occasion trucks will be backed into the building and parked there for periods of varying length. This matter becomes of increasing importance because we understand that you would like to omit the enclosure of the equipment for heating the building that is shown on the plans. While it is true that the Building Code does not require enclosure of the heating equipment as far as the store and warehouse use of the building is concerned, it is necessary that there be a separation between the heater and any space where motor vehicles may stand; such separation to be of at least one-hour fire resistance if not more than three motor vehicles are involved or of 2-hour fire resistance if more than that number are involved. If it were planned to store up to not more than three motor vehicles in the building overnight, a separation of one-hour fire resistance would be required around the area thus to be used and this construction would provide the required separation from the heater, which could then be left without enclosure. At any rate, as long as there is a door available so that motor vehicles can be driven into the building, it appears necessary that the heating equipment be enclosed. It is likely that a separation of one-hour fire resistance would satisfy the requirements of the Code, in which case wood stud partitions covered on both sides with metal or perforated gypsum lath and plaster would be acceptable in place of the masonry partitions shown. If this were to be done, a 6" raised threshold would be required in any doorway to the heater room from inside the building unless the floor of the heater room were to be made that much higher than the floor of the rest of the building. A self-closing Glass "C" labeled fire door would be required in such an opening to the heater room. Decision will need to be made as to how this problem is to be solved, and the method decided upon shown on revised plans, before issuance of any permit.

2. Exit signs are required over the door from the show room to the warehouse section of the building and directional exit signs or otherwise are required in the warehouse to indicate the location of the small door in the front wall of the warehouse. See Section 205e4 of the Building Code.

3. Vestibule latches without locks of any other nature are required on all doors involved in a means of egress. These will include the entrance door to the show room as well as the other two doors mentioned above. A vestibule latchset is one so arranged that the door on which it is installed may always be opened so as to provide egress in the direction of exit travel without the use of a key, even though it is locked against travel in the opposite direction, merely by turning the usual knob or by pressure on the usual thumb lever. See Section 212e2.5.

November 23, 1951

4. It is noted that only one toilet room is shown on the plans. The adequacy of toilet arrangements, particularly if women are to be employed in the building, is a matter controlled by State law rather than by the Building Code and we suggest that you consult the City Plumbing Inspector as to whether the arrangements shown meet with requirements.

5. In case wood strapping is to be used on any of the masonry walls for fastening of finish material, incombustible firestopping is required between the strapping at the ceiling line. This should be indicated on the plans. See Section 302e2.

6. The space from the top of the wall plates to the roof decking between the roof timbers is required to be firestopped as specified in Section 300b6.3(b).

7. Is the ceiling over the show room and office area to be attached directly to the roof timbers or is it to be hung therefrom? Since there is little excessive carrying capacity in the roof joists on the span and spacing indicated, ceiling loads should be kept to a minimum.

8. The foundation for the front entrance platform is required to extend at least four feet below grade, but is not so shown. Because of the location of the building in the Fire District, the use of combustible material in construction of the canopy is not allowable. Details of its construction need to be shown. - *W. J. C. J.*

9. Although not indicated, cross bridging is required at the center of each span of roof joists. How is the roof to be drained? Is the roof drainage to be connected to the public sewer or is the water to be allowed to spill over the edge of the roof? - *W. J. C. J.*

10. The method of reinforcement of lintels, particularly those over the larger openings appears to be questionable.

11. The estimated cost of \$16,000.00 given in the application for permit to cover construction of the building appears rather low in view of today's costs. It may be that in giving this estimate you were not aware that the Building Code specifies that the cost of work upon which a fee is to be based shall represent the estimated completed cost of the entire new building, including all excavations, general construction, plumbing, heating, electrical work, and all other built-in construction and equipment considered a part of the completed building. Figuring on this basis, please furnish a revised estimate of the cost of the work and pay the additional fee entailed or else provide a detailed estimate of costs to support the figure you have given. - *OK*

Information indicating that compliance with Building Code requirements <sup>is</sup> to be provided as regards the above details will need to be furnished on revised plans before a general construction permit for the building may be issued.

Very truly yours,

Warren McDonald  
Inspector of Buildings

Job - No instruction card and relocation  
of remote control switch

Gentlemen:-

Upon inspection of the above job, on May 19th, our inspector reports the following conditions in connection with your oil burner installation.

1 - An instruction card is to be provided.

2 - The required remote control switch is to be relocated so as to be on the office side of the opening between the office and storage space, rather than by the side door close to the tank and burner, as it is now. The reason for the relocation of this switch is so that in case of an emergency, the burner can be shut down and the flow of oil stopped without having to get in close proximity to the tank and burner.

It is important that correction of these conditions be made before June 3rd, 1952, and notify this office of readiness for another inspection.

If additional information relative to the above is desired, please phone Inspector Alton T. Hamilton at 4-1431, extension 234, any week day but Saturday, between 8:00 and 8:30 A. M.

Very truly yours,

Inspector of Buildings

INSPECTION CO. 1

AP 132-152 Anderson Street-1

November 21, 1951

Maine Electronic Supply Corporation  
23 Dear Street  
Portland, Maine

Copies to: Mr. George Lewis  
30 York Street  
Mr. William J. Gagnon  
R.F.D.#1, Cumberland Center, Me.

Gentlemen:

Advance permit covering excavation and construction of foundation only for a new mercantile building 45' x 75' at 132-152 Anderson Street is issued herewith to you based on the foundation being constructed as shown on revised plans received November 21, 1951. However, it is not necessary to extend the footings for the interior lally columns into the ground at least 4' as shown. It will be acceptable to place the six foot square footings only deep enough into the ground to allow the concrete floor to be laid on top of them.

Very truly yours,

Warren McDonald  
Inspector of Buildings

WJM

P. S. Of course it is allowable to extend the column foundations to any depth your designer thinks desirable.
