CITY OF PORTLAND, MAINE DEPARTMENT OF BUILDING INSPECTION

Fortland Redevelorment Authority 389 Congress St. Fortland Faine

Jecember 8 1960

Gentlemen:

With relation to permit applied for to demolish a building or portion of building at 17 est cove St. it is unlawful to commence demolition work until a permit has been issued from this

Section 6 of the ordinance for rodent and vermin control provides: "It shall be unlawful to demolish any building or structure unless provision is made for rodent and vermin eradication. No permit for the demolition of a building or structure shall be issued by the Building Inspector until and unless projections for rodent and vermin eradication have been carried out und representation operator registered with the health De.

The building permit for demolition cannot be issued until the provisions of this section have been satisfied. It is the obligation of owner or demolition contractor or both to take up with the Health Department the matter of complying with this section, being prepared to inform that department what registered pest control operator is to be

Very truly yours,

AJS/jg

Albert J. Sears Inspector of Buildings

Bradication of this building has been completed.

17 Cove Street

December 16, 1959

343

pecember m, 1777

Mr. Faul S. Boyington 17 Cove Street co to: Supervisor of Housing Inspection es to: Director of Hum Chearance and Redetelogment

Dear Mr. Boyington:

An inspection of the indling at the news mand location, of which you are reported to be the owner, disclosed easy unable wall dangerous structural so which may as follows:

- 1. The ortire beliefly is tilted turned the rear of the rost, there is a sag in the mile of the rear part of roof, and sills supporting building are below ground at the rear, all of which conditions are indications of trouble involving the structure of the building.
- 2. The outtre supports and fracing of first floor where exposed in the collar are very such sub-standard and potentially dangerous.

All of these conditions indicate the need for invediate investigation and correction of unsafe conditions, an operation which will undoubtably call for extensive require and reinforcement of the building. If this is not done right away or if the enter is not otherwise adjusted, I shall be compelled to issue an order under the Building Code requiring correction of these unsafe concitions under a building permit, with application for which will need to be filed a framing plan indicate, the number in which repairs are to be made.

Very truly yours,

MS/jg

Ilbort J. Searn Inspector of Buildings

1/17/61- This bulding has been purchased by the Redevelopment authority and demolished.

LOCATION 17 Cove St.

Permit
INQUIRY
COMPLAINT
AJS:
Attached is report of structural
condition of this awelling together with the
request from the Health Dept.
It seems irregular for a housing insptr.
to make such a report andrequest direct to you.
Without appearing to be "smooty", this tendency
in the past with relation to housing and rire
inspectors, ormeven police officers, has poen
successfully discouraged, it being obviously
that such a practice unchecked will lead
to written and verbal complaints, and orten
irresponsible recorts, that would keep this
denartment on the jump.
As to the building in question, it
appears that we should not advise this owner
either direct or through the Health Dept
Under Sect. 109, any order would have to be on
on the basis of dangerous conditions which
certainly exist.
Perhaps you would prefer to write to the
owner, giving a copy to Miles Weaver, telling
him of the conditions found and that after a
limited period, if the matter is not otherwise
which will require a permit and a plan short
which will require a permit and a plan shoring hor he means to make the building permanently safe. (Copy also to HEALTH Director)
1049

Ci- 17 Cove Street

Structural c: ition of the single family dwelling house reported to be owned by
Paul F. Poyington (see request of 12/9/59 from Housing Division of Health Department

Dec. 14, 1959

While the corner posts appear to be parallel to each other and the roof plates substantially parallel with the sill, the entire building is "tilted" toward the rear of the lot where the ground is much higher than at the front. This is probably of long standing since the courses of the asphalt siding appear to be level. There is a sag in the ridge at the rear part of the roof, and the chimney above the roof is only passable. The sills under the building are below grade in the rear and the lay of the land is such that a great deal of water from the hillside in the back must run down and into the cellar.

The ceilings have been recently renewed with gypsum wallboard (presumably on plaster), so the effects of the defects in framing and supports in the cellar could not be seen, though there are some defects at the joints of .e ceiling boards,

Except for the front wall, both foundation and underginning of rough stone laid only partially in mortar. There is some reason to believe that the cellar did not extend under the entire building at some time.

The framing of first floor and supports in the cellar are very bad. The sills at the rear at that appear to be fairly new, but there may be only new boards placed over the old sills. The direction of run of the girders is not uniform. The girders appear to be in fair condition and of substantial size, but they are supported by pipe columns and posts on too long spans, some of the posts being about 4' pipe with pipe couplings in them, definitely out of plumb, and all of the posts have questionable foundations. Some of the posts have makeshift polsters, and at least one girder is supported on another off the post.

the lac floor joists are 2xô and 2x2, many of them being 3t" or more from center to center. Some of the floor joists have no support whatever under one end.

There is only a dirt floor with a large pile of dirt not far from the oilburning heater. Apparently some an Heur plumbing has been going on recently. Some of the cultar is evidently used as a workshop, and there are 4 or Lore automobile doors propped-up at about the center of the cellar.

The entire supports and framing of lat floor exposed in the cellar are potentially dangerous.

CITY OF PORTLAND, MAINE MEMORANDUM

Mr. Albert Sears, Building Inspector

DATE December 9, 1959

FROM: Mr. Robert Pratt, Housing Inspector

SUBJECT: 17 Cove Street

On or about Movember 2, 1959 we issued orders to Mr. Faul E. Boyington of 17 Cove Street, to correct certain substandard conditions as deline ted in our order of this date.

The property is within the Bayside Urban Renewal Project and Mr. Boyington is undecided whether or not to repair the property or sell it to S. C. R. A. The cost of correcting the substandard conditions as described below will be the determining factor as I will retain it.

- a. The structure leans bealy to one side.
- b. There appears to be structural faults in the Moor timbers, stringers, and foundation.

Will you please have an inspection made of the property and describe what steps must be taken to correct this condition.

We will be pleased to hear from you at your earliest convenience.

INSPECTION COPY

Final Inspn. Final Notif. Inspn. closing-in Cert. of Occupancy issued NOTES #ISPECTION NOT COME

AP 17 Cove St. (west)

November 25, 1952

Mr. Paul Boyington, 189 Franklin Street, Portland, Maine

Copy to: Mr. Boyington for contractor

Dear Mr. Boyington:

Building permit for repair after fire at 17 Cove Street (west) is issued to you herewith subject to the following. If these conditions are not understood, or, if you are unwilling or unable to comply with them, it is important that you do not start the work but that you contact this office with further explanation.

As a result of your conference with Inspector Hamilton the permit is issued on the basis that the entire roof framing is to be replaced instead of merely repairing eight or ten rafters as indicated on the application.

These rafters are to be no less than 2x6, all one length from plate to ridge, spaced no more than 24 inches on centers and a ridge board used between the rafters at the peak.

The roofing is to be of asphalt, each package to bear the label of the Underwriters' Laboratories, Inc. identifying the roofing as Class C.

There have been at least two fires in this building before your owner-ship, a permit for repair after fire having been issued on August 10, 1951 and have not been fully completed, but the work is to be completed under the permit new issued.

You should make sure that none of the interior work, partitions, walls or ceilings are to be covered in any manner from view where they are to be new or where they are now exposed until notice for readiness for closing in irrepection has been given at this office and before our inspector has left his green tag

Before this notice for inspection is given, all electric wiring and plumbing pipes which are to be covered from view should be inspected and approved, inspected by the respective inspector of the other departments; also all required fire stops should have been in place.

Very truly yours,

WMcD/H

Warren McDonald Inspector of buildings Taulder yestern heallers 5

August 10, 1951

Mr. Urban Rossignol 17 Cove Street Portland, Maine

Dear Mr. Rossignol:

Building permit to change use of building at 17 Cove Street from two families to one is issued herewith subject to the following.

- 1. It is necessary where new openings are to be cut in the first and second floor framing for the new stairways that the floor timbers at the sides and ends of the openings be doubled up.
- 2. Where the existing openings in the floors are to be filled in, the new floor timbers are to be notched over no less than 2x3 nailing strips spiked to the timbers at the ends of the openings.
- 3. None of this new work including the stairs themselves are to be covered from view until notice has been given this department for an inspection and authorization to "close-in" the work has been given on a green tag left at the job.

Very truly yours,

AJS/B

Warren McDonald Inspector of Buildings
