AP 10 Willis Street-I

April 2, 1946

Mr. Earlon Parker
10 Willis Street
Portland, Maine

Subject: Building permit for demolition of 2-story rear shed at the rear of dwelling at 10 Willis Street and construction in its place of a 2-story open rear piazza

Dear Sir:

Since you furnished no framing plan showing sizes, spacing and spans of all structural members and location of foundation piers etc., I am compelled to take a great deal for granted in trying to determine whether or not the proposed work will comply with Building Code requirements. This is not to doubt your judgment or experience but by way of warning that we have no way of adjusting the requirements of the Building Code to any details that you may build into the piazza, and without a plan which shows compliance with the requirements of the Building Code as to details we are unable to check in advance of doing the work.

For instance, I presume that the 4x6 sills and the 4x6 beams evidently to be used under second floor joists and under roof joists will be set with the 6-inches upright, that they will be suitably supported upon the posts to act as both braces and ties and at the same time not weaken the posts materially, that you are aware of the requirements for splicing the solid corner and intermediate posts if all one length cannot be procured, that you will anchor the sills or posts, as the case may be to the masonry piers with metal dowels or equivalent, that the concrete piers will extend at least six inches above the surface of the ground, that you are aware of some of the prohibitions of the Building Code as to supporting floor joists on the members which support them and supporting the floor and roof joists against the existing building.

We want to be of service and the natural thing to do in case of doubt is to come down here and ask about the details. We are so completely overcome with incoming business, however, that there is little time to talk over details with the many people who want to us has often been done in the past.

If you are in doubt about these details, it is necessary that you make a framing plan showing them and leave it down here so that we can check as time affords.

I am only able to issue the permit under the Zoning Ordinance with the proposed structure so close to the side and rear property lines because of the fact that you are evidently from your location sketch increasing these distances over those which now exist to the shed to be removed. Please be careful about this and if you should have some change of mind about the location of the piazza or the size of it, file application for amendment to the permit now issued before making the change so that you may not get into difficulties with the Zoning Ordinance. It is true that we only try to interpret the ordinance aright and every property owner has the right to challenge our interpretation of it and the basis on which we issue permits--thus any neighboring property owner who is concerned about your building close to lines can raise questions which might be difficult for you to answer.

Very truly yours,

Inspector of Buildings

February 21, 1936

File: C-56-1
R-5/11/36

Mr. E. H. Thomas,
80 Wilson St.,
Portland, Me.

Dear Sir:

With relation to the building which you are reported to own or control at 10 Willis St., an inspector from this office reports certain conditions pertaining to smokepipes in the cellar that are considered dangerous from the standpoint of fire hazard.

As authorized and directed by Sections 28, 29, 30 and 52 of Chapter 25, Revised Statutes of Maine, copy attached hereto, it is necessary for me to require that you have these conditions corrected on or before March 10, 1936, essentially as indicated below.

Replace both smokepipes serving the two heaters connected to the front chimney in the cellar, - both are badly rusted and one so badly corroded that it has a hole in it about 1" in diameter. When the pipe nearer Willis St. is replaced lower it as high as possible (perhaps it may be lowered as much as 3 inches) so that the top of it may be as far as possible from the woodwork above. When both pipes have been replaced and proper connection made tightly to the chimney, provide a shield of so-called "asbestos lumber" over each, to be at least three times the diameter of each smokepipe in width and to be suspended approximately half way between the tops of the pipes and the woodwork above on non-burnable hangers such as wire.

When the work is completed, please notify this office so that another inspection may be made.

Very truly yours,

Warren T. Drank
Inspector of Buildings
