AP 33 Cedar Street

June 5, 1945

Mr. Karl Hayes, 33 Cedar St.  
Mr. W. A. Mathes, 4 Hall Court

Subject: Building permit for construction of concrete retaining wall and steps outside of the dwelling house at 33 Cedar Street

Gentlemen:

I have talked with Mrs. Hayes and receive a little more complete picture of what is intended than is shown on the application for the permit. Apparently you proposed to build a concrete wall along the street line of Cedar Street from the Hayes building up the hill to the next building, to build in concrete steps in about the center of this wall leading up to the yard grade, providing "wing" walls beside the concrete steps—then fill in behind the steps and retaining wall to make a level yard.

The height of the retaining wall is shown as 4 foot 6 inches and only 10 inches thick at the bottom and 8 inches thick at the top. I presume this means that the wall is to be 10 inches thick at the grade of the public sidewalk. This is not thick enough for a retaining height of 54 inches. The wall should be at least 18 inches thick at the grade of the public sidewalk although there is no objection to making it only 8 inches thick at the top of the wall, if desired. The main wall is required to extend at least 4 feet below the surface of the public sidewalk, and of course would have to be 18 inches thick for this entire depth.

Mr. Mathes has not given any detail of how he intends to build the concrete steps or to support them, but since it is the intention, apparently, to have the face or riser of the bottom step out on the street line, I suggest that the concrete below this step be made a continuation of the 8-inch thickness of the wall on either side and extended four feet below the surface of the sidewalk. Thus frost would be kept from getting underneath the concrete steps, especially the lower part and heaving them. The "wing" wall at the sides of the steps would not need to be made very thick but should be carried down to a flat bearing on the original soil.

Mr. Mathes has not shown whether or not the concrete steps would be of solid block concrete or be reinforced. Obviously, if not reinforced, crosswise, they should be carried down to a firm bearing on the original soil.

Very truly yours,

W McD/S

Inspector of Buildings

P.S. Before commencing this work you should apply to the Commissioner of Public Works to indicate the correct street line (inside edge of public sidewalk) so that the new wall may not project at all over the public sidewalk. This will be done free of charge upon request. Also, please note that the building permit does not give the right to obstruct or occupy the public sidewalk in any way. If the work will obstruct the public sidewalk for materials, or otherwise, Mr. Mathes should apply, before starting the work, to the Public Works Department for permit for such use.
