Re: Widgey Wharf

December 9, 1971

Widgey Wharf Inc.
Widgey Wharf

Gentlemen:

On June 23, 1971 we issued to you a permit to construct a one-story frame building with metal covering on Widgey Wharf. When inspected it was found to have an outside weather cover other than metal. This is not allowable because the property is located in Fire District #2 where any construction of wood has to be covered with metal.

It is necessary that this work be completed before the building is put to use.

Very truly yours,

Hugh Irving
Inspector

CITY OF PORTLAND, MAINE
DEPARTMENT OF BUILDING INSPECTION

November 12, 1964

Widgery Wharf Inc.
Widgery Wharf.

Gentlemen:

(1-story frame building approx. 30'x100')

With relation to permit applied for to demolish a building or portion of building at Widgery Wharf it is unlawful to commence demolition work until a permit has been issued from this department.

Section 6 of the ordinance for rodent and vermin control provides: "It shall be unlawful to demolish any building or structure unless provision is made for rodent and vermin eradication. No permit for the demolition of a building or structure shall be issued by the Building Inspector until and unless provisions for rodent and vermin eradication have been carried out under supervision of a pest control operator registered with the Health Department.

The building permit for demolition cannot be issued until the provisions of this section have been satisfied. It is the obligation of owner or demolition contractor or both to take up with the Health Department the matter of complying with this section, being prepared to inform that department what registered pest control operator is to be employed.

Very truly yours,

Albert J. Sears

Jan. 11, 1963

Mr. Howard F. McCracken
Centennial Street
Peaks Island, Maine

Dear Mr. McCracken:

It is reported that you are the owner of the house boat which has been pulled up onto filled land between Widgey and Central Wharfs. Will you please inform this office as to your plans for the use of the structure so that determination can be made as to application of Zoning Ordinance and Building Code requirements to the situation.

If the boat is to be used as a building in its new location out of the water, it seems evident that it will need to comply with Zoning Ordinance restrictions as to use and distance from street and lot lines and with Building Code requirements as regards foundation, construction, and Fire District #2 regulations concerning incombustible covering and distance from other buildings.

Very truly yours,

Albert J. Sears
Building Inspection Director

Cplt. 58/99-Widgery's Wharf

Mr. William A. Floyd
303 Preble Street
So. Portland, Maine

Dear Mr. Floyd:

It has come to the attention of this department that you have recently constructed a small one story wood frame building on Widgery's Wharf without first having secured a building permit for the structure as required by the Building Code. Unfortunately there appear to be some details of the project which do not comply with Code requirements and which, had you applied for a permit before starting work as required, would have been explained to you and straightened out before issuance of permit.

Because of the location of the property in Fire District #2, all combustible material which would otherwise be exposed to the open air is required to be covered with metal or equivalent incombustible material. The building is also required to be kept at least 20 feet away from any existing building unless all parts of the walls closer than that to the existing buildings are constructed of materials providing at least two-hour fire-resistance with any openings protected by fire windows and doors. As far as we know there is no way of providing such required fire-resistance with walls of wood frame construction.

It is necessary that you do no further work on the building, but that you proceed at once to file an application for a belated permit, filing therewith a plot plan showing the location of the building on the wharf and distances to existing buildings so as to comply with Code requirements, as well as giving structural framing of building which can be checked against Code requirements and indication of the material which roof and walls are to be covered.

Very truly yours,

Albert J. Sears
Deputy Inspector of Buildings

APPLICATION FOR PERMIT FOR
HEATING, COOKING OR POWER EQUIPMENT

Portland, Maine, Aug. 2, 1946

PERMIT ISSUED
01417
AUG 3 1946

To the INSPECTOR OF BUILDINGS, PORTLAND, ME.

The undersigned hereby applies for a permit to install the following heating, cooking or power equipment in accordance with the Laws of Maine, the Building Code of the City of Portland, and the following specifications:

Location 20 Widgerly's Wharf Use of Building Crab meat shop No. Stories 22 Existing Building
Name and address of owner of appliance Ralph Hamilton West Falmouth RFD 5
Installer's name and address same Telephone

General Description of Work

To install gas fired hot water heater

Health Notices to Health Officer and thus

IF HEATER, OR POWER BOILER

Location of appliance or source of heat first floor Type of floor beneath appliance concrete floor
If wood, how protected? wood 3" concrete slab Kind of fuel gas
Minimum distance to wood or combustible material, from top of appliance or casing top of furnace 36" sides 6" back 24" with asbestos lumber shield
From top of smoke pipe 36" From front of appliance 6' From sides or back of appliance
Size of chimney flue Other connections to same flue None
If gas fired, how vented? existing chimney Rated maximum demand per hour

IF OIL BURNER

Name and type of burner Labelled by underwriters' laboratories?
Will operator be always in attendance? Does oil supply line feed from top or bottom of tank?
Type of floor beneath burner Number and capacity of tanks
Location of oil storage How many tanks fire proofed?
If two 275-gallon tanks, will three-way valve be provided?
Will all tanks be more than five feet from any flame?

IF COOKING APPLIANCE

Location of appliance Kind of fuel Type of floor beneath appliance
If wood, how protected? Minimum distance to wood or combustible material from top of appliance
From front of appliance From sides and back From top of smokepipe
Size of chimney flue Other connections to same flue
Is hood to be provided? If so, how vented?
If gas fired, how vented? Rated maximum demand per hour

MISCELLANEOUS EQUIPMENT OR SPECIAL INFORMATION

Amount of fee enclosed? 1.00 (\$1.00 for one heater, etc., 50 cents additional for each additional heater, etc., in same building at same time.)

APPROVED:

Will there be in charge of the above work a person competent to see that the State and City requirements pertaining thereto are observed? yes Ralph Hamilton

Memorandum from Department of Building Inspection, Portland, Maine

20 Widgey's Wharf—Construction of toilet room and vestibule for and by Ralph Hamilton, lessee, owners Prop. of Union Wharf—8/3/46

To Lessee & Owner:

Studs in partitions are to be upright and to be no more than 16 inches from center to center instead of the 24 inches from center to center indicated on the application. Evidently the 2x3's indicated to be at the top are for the framing of a ceiling. Therefore there should be a plate across the top of the partitions and the 2x3's should be set no more than 16 inches from center to center and with the three inch dimension upright.

Note requirement for notification to this office when the partition and ceiling are ready for covering up, and that no covering is to be put on either until inspection

It is understood that this permit does not include installation of heating apparatus which is to be taken out separately by and in the name of the heating contractor. PERMIT IS WAIVED

Recommendations to clear Building Permit.

1. Ante rooms to toilets -- springs on these doors.
2. Separate locker rooms for both sexes.
3. Outside ventilation or vent thru roof for toilet rooms.
4. Walls and ceiling should be impervious and with material that is non absorbant so that it can be painted.
5. Consideration should be given to rat proofing.
6. At present windows do not ventilate to outside air. Ventilation in processing room should go directly thru roof.
7. Sink should be installed in processing room for washing pots, etc.
8. Hot and cold water to be installed in sink and lavatories.

Chief Restaurant Inspector

Mr. Charles Olson
A. H. Shurtleff Co.

Subject: Building permit for construction of non-bearing partition in first story of a certain building on Widgey Wharf to provide lobster shop

Gentlemen:

Mr. Olson, in filing application for the building permit failed to indicate in any way just which part of which building this lobster shop is to be in. It is important for us to know the location and necessary that he make a sketch which is intelligible to us here of enough of the wharf to indicate clearly just which building this shop is to be in. Realizing that he must be anxious to get started and that considerable time has been consumed getting the required approval of the Health Department on the building permit, I am issuing the permit with the thought that he will come in as soon as he can and file his sketch showing the location of the work.

Application for the permit indicates that the new partition will be eight feet high closed at the top and that the partition will be constructed of 2x4 studs 48 inches from center to center covered on one side with matched boards.

There is no indication as to what kind of framing will be used for the ceiling over the top or what is to support this framing. If this closure over the top of the new shop is to be only eight feet high, it seems likely there will be room enough above it to use that level for storage. On that basis the framing of the ceiling ought to be strong enough to take any reasonable load that would come upon it. In the absence of any information as to what you propose we will have to check it over after it is up which would be a bad time to find out it was too light.

With regard to the type of partition which you evidently propose, the Building Code provides that the studs which are upright shall be no more than 48 inches from center to center and that there shall be cut in between them horizontal studs so that sheathing will get a bearing and a chance to nail no more than 48 inches apart. A shoe same size as studs is to be run on the floor and the upright studs set on it. If there is any possibility that this enclosure over the top of the shop will be used for storage then this partition for which you are now getting a permit would be a bearing partition instead of non-bearing and this type of open work construction with sheathing on one side is not allowable, but the studs would have to be all vertical, no more than 16 inches from center to center with a 2x4 shoe on the floor and a double 2x4 plate at the top to receive the cross joists. Please be governed accordingly.

Mr. Olson's application makes no explanation of how the new shop is to be heated or whether or not there is to be anything in the way of heat to provide for cooking lobsters or similar operations. All of this must be taken care of separately and any boilers or the like for making steam require a separate permit from this department before they are installed and such permits are issuable only to the actual installer.

Probably the building in which you intend to build this partition is on a pile wharf. In which case a metal chimney may be used, but must in each case be covered by a special permit from this department before work on it is commenced.

I hope you will get all these matters straightened out before actually starting the work to save the possibility of laying out some money and then find that

ARRANGEMENTS RELATING TO REPAIRS AFTER FIRE IN THE BUILDING OWNED BY UNION WHARF PROPRIETORS AT ABOUT 28 WIDGERY'S WHARF

May 4, 1939

New galvanized metal to be used to cover the outsides of the building in certain parts where the boarding of clapboards have been burned or torn off by the Fire Department. Where metal covering is required it is to include corner boards, wooden trim, the cornice and the like.

On the wharf driveway side the area above the doors and windows up to and including the cornice and including the finished boards at the window and door heads wherever they must be renewed for the greater part of the length of the building, but from the large door nearest Commercial Street to the Commercial Street end or the northwest end of the building metal covering to be used from the level of the window sills up to and including the cornice. The entire Commercial Street end or the northwesterly end wall is to be practically rebuilt and completely covered with metal, including lapping the metal around the corner boards at both sides of the building. On the dock side the space from the top of the windows and doors up to and including the cornice from the Commercial Street end down to the point where the clapboards have not been damaged by the fire or the Fire Department in tearing out. On the dock side adjacent to the Commercial Street end of the building there is an area under the windows which was covered with asphalt roof paper, but was not damaged by the fire. This may be repaired with material similar to that in use before the fire.

Original studs in the building were 2x6 about 24" centers. In cases where studs are burned so badly as to need reinforcement, 2x4 will be placed beside them running from plate to sill and be spiked to the studs to be reinforced. Where walls have to be replaced, standard construction will be used 2x4 studs, 16" from center to center and the usual construction of headers and short studs around windows and doors.

This building was originally two stories high, the second story having been removed, and the roof over the one story portion having 2x4 rafters supported upon puncheons on the original second floor construction. Quite a large area of this roof has to be rebuilt and will be replaced about as it was before, except that asphalt roofing no less than Class C Underwriters' Standard will be used instead of the tar and gravel. Wherever the joists or other supporting members of the original second floor are so badly burned or damaged as to make their strength questionable similar members will be placed beside them running the full length and getting proper bearing on the main girders or posts.

General Description of New Work

To erect metal smokepipe through the roof of this one story building located on a pile wharf. Where the smokepipe passes through the roof an opening and thimble of galvanized metal to fit will be provided at least 6" larger all around than the smokepipe. This thimble will extend from the underside of the roof joists to at least 9" above the roof. A flange of sheet metal will be fastened to the smokepipe above the top of the thimble in such a way as to form a hood to keep the weather from entering the building without being in contact with the thimble. The smokepipe will extend down and be supported upon a piece of 1" hollow tile set on the wood floor and will be thoroughly braced with incombustible material.

General Description of New Work

To erect metal smokepipe through the roof of this one story building located on a pile wharf. Where the smokepipe passes through the roof an opening and thimble of galvanized metal to fit will be provided at least 6" larger all around than the smokepipe. This thimble will extend from the underside of the roof joists to at least 9" above the roof. A flange of sheet metal will be fastened to the smokepipe above the top of the thimble in such a way as to form a hood to keep the weather from entering the building without being in contact with the thimble. The smokepipe will extend down and be supported upon a piece of 4" hollow tile set on the wood floor and will be thoroughly braced with incombustible material.

It is understood that this permit does not include installation of heating apparatus which is to be taken out separately by and in the name of the heating contractor. **CERTIFICATE OF OCCUPANCY REQUIRED IS WANTED**
