January 14, 1959

Complaint 40/125

Mr. & Mrs. Arthur W. Wood 36 Alder Street

Doar Madam & Sir:

An in spec.or from this department reports that certain unsafe conditions exist at smokepipe entrances to rear chimney in the building at 250-254 High Street which you are reported to own or control. His report states that 12" diameter metal safety thimbles, required where smokepipes enter the chimney at 2 locations in the first story are not in evidence. He also reports that there are 2 smokepipe entrances to this chimney in the basement presently plugged with tin cans.

It is necessary that you provide the required safety thimbles in the first story and that you have the unused smokepipe openings in the basement bricked up and then notify this department for an inspection when the work is completed. In the event that you have any questions in connection with the work you may consult this office.

Very truly yours,

Theodore T. Rand Deputy Inspector of Buildings

254 High Street——Installation of 1-1000 gallong fuel oil tank for John Higgins by N. A. Bruns, installer

Before tank and piping is covered from view, installer is required to notify this department of readiness for inspection and refrain from covering the tank up until approved.

This tank of 1000 gallons capacity is required to be of steel or wrought iron no less in thickness than No. 12 gauge; is required to be galvanised if the metal is less than No. 7 gauge; and before installation is required to be protected against corrosion, even though galvanized, by two preliminary coats of red lead and heavy coat of hot asphalt.

Pipe lines connected to underground tank, other than tubing and except fill line and test wells, are to be provided with double swing joints arranged to permit the tank to settle without impairing the efficiency of the pipe connections.

Owner and installer will have to bear the responsibility for the structural capacity of the tank to support loads from above such as heavy motor trucks.

If tank will be so located as to be subjected to the action of tide water or "ground" water, adequate anchorage or weighting must be provided to prevent "floating" when tank is empty or nearly so.

(Signed) Warren McDonald Inspector of Buildings

June 22, 1939

Oliver T. Sanborn, Chief of the Fire Dopartment

Dear Sirt

While inspecting some minor changes in the building at 250-25: High Street, a six family tenement house with three families on each side of a dividing partition, owned by W. M. bylvoster of 36 State Street, an inspector from this office finds that the means of egress from the third floor leave a lot to be desired.

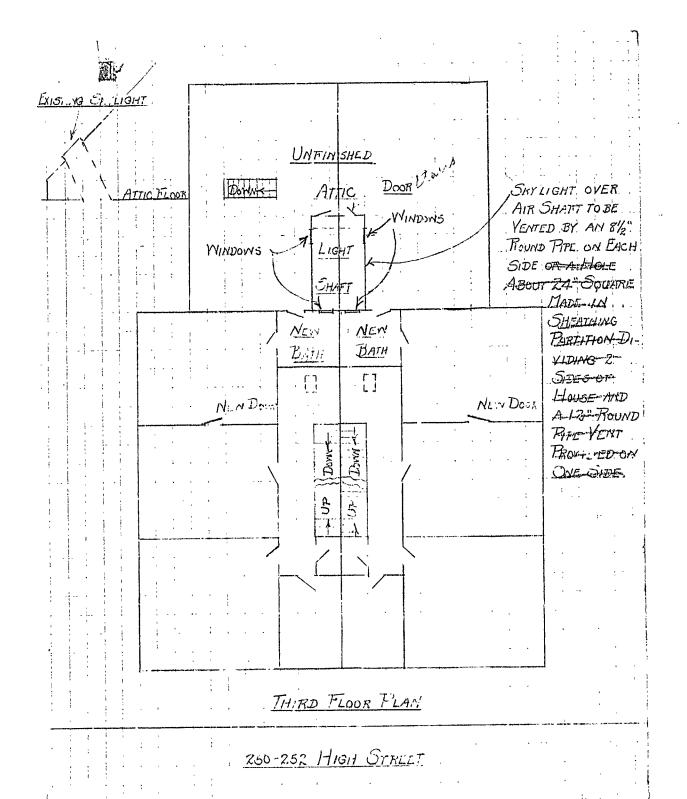

It appears that the occupants of the second story apartments on both sides of the building are using the public hallways in the rear for their own purposes and the inspector found the doors at the foot of the stairs leading from the third floor to the second floor in the rear locked on the second story side so that persons in the third story could not get down to the ground wia the rear stairs at all. Even at best, I understand that these rear exits are none to good.

This condition is called to the attention of the Board of Fire Engineers for whatever seems necessary to be done.

Very truly yours,

WicD/H

Inspector of Buildings

Portland, Maine,.

Class of Building or Type of Structure_____

MAY 1 1939

To the INSPECTOR OF BUILDINGS, PORTLAND, ME.

The undersigned hereby applies for a permit to erect alter install the following building structure	equipment in accordance
with the Laws of the State of Muine, the Building Code of the City of Portland, plans and specifications,	if any, submitted herewith
and the following specifications:

Re: 250 High Street

Dear Sir:

Your application to make alterations at 250 High Street has been reviewed and a building permit is herewith issued subject to the following requirements:

- 1. This permit doesn't change the use of this building to increase the number of apartments.
- 2. As per our telephone conversation on January 6, 1987 the moving of this wall will be less then (2) two feet and will have a good bearing for the transfer load.

If you have any questions on these requirements, please call this office. Sincerely,

P. Samuel Hoffses Chief of Inspection Services
