Allen Storage Warehouse Company
338 Cumberland Avenue
Portland 3, Maine

Subject: Fatal accident in connection with
passenger elevator at Allen Storage Warehouse,
338 Cumberland Avenue

Gentlemen:

Because there is some control over existing elevators in the Building Code of the City of Portland, our inspector has inquired into the circumstances under which your employes, Mr. Spear, was recently killed by falling into the passenger elevator shaftway. On the basis of his report I am writing to you not with any intent of ordering you to do anything about it, but with the hope that a similar accident may not occur in the future.

According to our inspector's report, Mr. Spear was at the fifth floor level and desired to travel down on the passenger elevator which was not at that floor level. The front of the passenger elevator enclosure at least at the fifth floor level is a metal grille, and the door to the enclosure is of similar material. In order to start the elevator to bring it up to the fifth floor, Mr. Spear would have to open the door from the outside and reach around and operate the cables which control the movement of the elevator.

The door to the enclosure at least at the fifth floor level has on it a latch which can be operated on the outside by a person who knows how without the use of a key. This fact is important because if the enclosure were being established now, aside from the fact that it would have to be a solid enclosure, the doorway leading to it would have to be such that it could only be opened from the outside with the key. We can speculate that had the door been operable only by a key, that Mr. Spear probably would not have had the key with him, and perhaps would be alive today.

It appears that he operated the latch from the outside and was in the midst of opening the door (the door found about half open after the accident) when he slipped or in some other manner fell into the shaftway. It seems unfair to this man who has lost his life to assume that he was merely careless. Certainly he could see through the open grille and must have known that the elevator was not at that level.

Had this been an open shaftway equipped with the required automatic-closing gates, it is probable that he would not have had to open the gates at all to reach the shipper cable.

Again let me say that the only object of this letter is to safeguard human life and limb in the future. While I know of no law that states precisely this fact, it is my belief that the condition whereby a man can open this door and operate the shipper cables from the outside is of itself dangerous. I recommend to you after consultation with your elevator people and perhaps with your insurance man that you either equip all of these doors with such a lock that they can only be opened from the outside by the use of a key, or better still that you have the doors absolutely interlocked with the movement of the elevator so that the doors

Allen Storage Warehouse Company ----- 2

January 11, 1966

except at the first floor level cannot be opened at all from the outside unless the elevator is at the floor level. It would be necessary of course to have at least one of the doors equipped with a key so that you could get in to the shaftway, otherwise you might be completely locked out from use of the elevator until you could break into the shaftway.

Very truly yours,

Inspector of Buildings

WMed/S

CC: Portland Company
Attn: Mr. Grote
88 Fore Street

1-10-46.

etc.

Allen Storage Co

338 Cumberland Ave.

Elevator accident (man killed by fall) report.
Talked with Mr Pratt of Storage Co.

Accident happened on the passenger elevator. This is the old open grille cable pull type made by the Portland Co 158 feet. 2-7491. Elevator runs from the first floor (street level) to eighth floor.

At the first floor, enclosure is open grille on all sides. All floors above have brick or terra cotta on three sides but front is open grille. Shaftway is open through the roof, air cut off at any level. Top over shaft has skylight, I believe milled on I wire glass.

Pratt said elevator has positive automatic safety against dropping but did not answer when I asked if it was ever tested. The car ^{door} ^{is} ^{not} ^{locked} ^{at} ^{any} ^{floor} ^{against} ^{operation} ^{from} ^{some} ^{other} ^{floor} ^{that} ^{is} ^{the} ^{car} ^{can} ^{be} ^{taken} ^{to} ^{the} ^{fifth} ^{floor} ^{left} ^{with} ^{door} ^{open} ^{or} ^{shut} ^{and} ^{someone} ^{at} ^{first} ^{floor} ^{can} ^{pull} ^{it} ^{down} ^{or} ^{up} ^{as} ^{they} ^{desire}.

Following is account of accident; no one was with the man when he fell so the account is from their through 5 months ago happened.

Mr Pratt and the man killed had gone to the fifth floor on a freight elevator with a load for storage and had come out of the storage room and found the door had left something outside. The door is sprung lock so Mr Shear (the man killed) started down to get a key. Instead of taking the freight elevator he went for the passenger elevator.

Mr Pratt said they always select the grille enclosure door when they leave the elevator and to the ordinary person the door is locked against entry but by reaching in and tripping some latch the employees know how to open it. They then this door slide if car is not at their level reach in on a pull cable to start car. They from the door but half way open cable could not be reached from here and believe Mr Shear carelessly stepped into

what he supposed would be the elevator but in
the open shaft. Of course it will have to be assumed
that he did not have his mind on it at the
time, as the ^{elevator} car easily be seen before the door
is opened.
