Mr. Harry M. Schwartz
 10 Congress Square

Dear Mr. Schwartz:

The building at the above address has been inspected by me and in reviewing the condition of the roof and walls I found that a number of the major trusses were already collapsed and others were in process of doing the same. I noted that because of this one of the outer walls was being pressed out to a dangerous condition.

By this letter I am denoting to you that I am classifying the building as dangerous and in accordance with Section 206 of the Building Code notifying you of same and requesting that you correct the dangerous condition as per the Building Code corrective order No. 206.1.2.

This structure has failed rather recently and is in danger of collapse if we should get a substantial snow load on it in the near future. If this should happen, it could follow down through to the lower level and the exterior wall could go with it. Some of those trusses have been repaired a number of times before but now have reached a point where repair seems to be beyond good logic or economic feasibility. It is my opinion that unless something can be done to either remove the roof by lowering it or replacing it, then it should be demolished.
