c.c. H. F. Fairham Co.  
440 Commercial Street

Gentlemen:-

Building permit for construction of an open shed 22 ft. x 50 ft. on the side towards Sturdivant Wharf of the building at 440 Commercial Street is issued herewith subject to the conditions listed below. If for any reason you or the owner are unable or unwilling to provide the construction indicated or if you do not understand what is meant, no work is to be started and the permit is to be returned to this office for adjustment. Conditions under which the permit is issued are as follows:-

1. It is understood that you plan to place a certain amount of fill and the concrete slab on top of it against the wooden walls of the main building in providing a floor for the shed at about the same level as the floor of the building. While such construction may not be in violation of the letter of the Building Code, it is our belief that it is not in accordance with the spirit of it and moreover is not good construction. However, we do not wish to make an issue of the matter if that is the way that the owner of the building desires to have the work done.
2. As indicated on the sketch filed with the application for permit, a concrete wall at least 10 inches thick at the top and 12 inches thick at the bottom, extending at least four feet below the grade on the outer side of it, is to be provided at the outer edges of the platform for retaining of the fill on which the concrete slab is to be placed.
3. The 2x10 rafters of Douglas Fir lumber spaced not over 20 inches on center on the 22 foot span are to have a pitch greater than 4 inches in 12 inches and are to be supported at one end on the wall of the building and at the other on a 4x10 plate carried on five 4 inch diameter Lally columns spaced so that the distance from the center of one to the center of the other will not exceed 10 feet. These Lally columns are to be provided with top and bottom plates so that adequate anchorage can be made to the concrete foundation wall and to the plate.
4. It will be permissible to fill in the triangular section between the bottom of the end rafter and a level even with the top of the plate at the Commercial Street end of the shed with wood frame construction consisting of 2x4 studs spaced 16 inches on centers covered with wood sheathing, but it is necessary that this wood sheathing be covered with sheet metal, asbestos board or shingles, or equivalent incombustible material.

Very truly yours,

Warren McDonald  
Inspector of Buildings

Subject: Permit for construction of open  
shed attached to building at 440 Commer-  
cial Street

Gentlemen:

The permit for the above work is issued herewith subject to the following:

1. In order to figure out, the 2x8 rafters should <sup>be</sup> no more than 18" on centers instead of 24" on centers as given in application.

2. The closed in space between the plate and the rafter at the Commercial Street end of the shed <sup>including cornice</sup> is required to be covered with sheet metal of no less than 26 gauge or equivalent incombustible material.

Very truly yours,

Inspector of Buildings

M. T. Taylor, Supervising Engineer,  
Barrett Division Allied Chemical & Dye Corp.  
40 Rector Street  
New York, New York

Subject: Building permit for construction of foundations and supporting frame and erection of two tank-car tanks for Barrett at 450 Commercial Street.

Dear Sir:

Permit for above work has been issued to local superintendent, relying upon your statement of design.

I have been unable to discover from the plans exactly how the tanks will be borne upon the steel beams. It appears that the tanks will act as self-supporting beams between the two end frames, each tank to be supported at each end on some type of chair bearing midway between the center and outer six-inch wide-flange beam used for a column.

While most of the connections are by bolts, I note some welding indications over each end column of end frames. Our Building Code requires that all welded joints involving rationally determined tension, compression or shear shall be performed by certified welders who are qualified under the procedure of the American Welding Society. If these joints are of that type (presumably the welding is to be done in the shop) we would like the assurance from you that the welders are qualified accordingly. If welding is to be done in the field the certification of the welders should be furnished here.

While this may seem being unnecessarily particular to you, let me point out that we had one failure on this job, the work at that time having been underway without a permit. I am sure you desire no repetition more even than we do.

Very truly yours,

(Signed) WARREN Mc

Memorandum from Department of Building Inspection, Portland, Maine

430 Commercial Street--Erection of two 17,000 gallon storage tanks for "Taveris  
for and by Barrett Division Allied Chemical and Dye Corp.  
6/9 '46

To Owner:

Bottom of foundations still show only two feet below grade while the usual required depth is no less than four feet. Permit issued at the owner's risk on the basis that information has been given at the fill of the wharf is all large stones not likely to be subject to frost action.

cc:

W. L. Kingston  
Superintendent Barrett Division  
Allied Chemical and Dye Corp.  
430 Commercial Street  
Malden, Mass.

(Signed) Warren McDonald  
Inspector of Buildings

Mr. Lake, Barrett Superintendent locally, has applied for a building permit to cover the above work, and is preparing a location plan showing the location and arrangement of the proposed tanks with relation to the dock and other nearby structures.

Our Building Code, Section 104b3 requires that designers of structural steel and reinforced concrete shall furnish with the design plans a statement of design signed by the actual designer and to be attached to the designed plans.

I take it that the Barrett Engineering Department has designed the reinforced concrete foundations and their engineer should therefore sign the statement of design to be attached to their plan of the foundations--B3976-9. I am enclosing a blank statement to be filled in, signed and returned to be attached to the plan. The foundation plan shows the bottom of the footer to be only two feet below the grade of the wharf while Section 207c requires ordinarily that such a foundation be extended at least four feet below the surface of the ground. However, Mr. Lake says that the wharf is filled with large stones which it would be difficult to excavate and which would not heave with the frost. Under such circumstances the Barrett designer should state these conditions either on reversed print or in a letter to accompany it and we will be able to accept the shallower foundations on that basis.

Another blank statement of design is enclosed to the Wilson Company for their designer to sign as to the structural steel design, and somewhere on one plan or the other the total load of the full tanks should be indicated. As far as I can see no welding is involved either in the field or the chop. I do remember that welding was present in the supporting frame that failed a few months ago and that some of the welded joints failed although probably no fault of the joints as it was probably called upon to carry stresses never intended. If welding is involved in this job to any degree involving direct stresses in the joints, the Wilson Company's statement of design should include the design of the welds, and we should receive the assurance from them that the shop welders were qualified under the American Welding Society Qualification Procedure. Welders under the Building Code are required to be certified in this city, having been first qualified under the procedure of the American Society. We have no certified welders in the city at present so that field welding presents some difficulties.

Very truly yours,

Inspector of Buildings

(Signed) Warren McDonald  
Inspector of Buildings

Mr. W. F. Barrett Superintendent locally, has applied for a building permit to cover the above work, and is preparing a location plan showing the location and arrangement of the proposed tanks with relation to the dock and other nearby structures.

Our Building Code, Section 104b3 requires that designers of structural steel and reinforced concrete shall furnish with the design plan a statement of design signed by the actual designer and to be attached to the design plans.

It is noted that the Barrett Engineer Department has designed the reinforced concrete foundations and their engineer should therefore sign the statement of design to be attached to the plan of the foundations--B397C-0. I am enclosing a blank statement to be filled in, signed and returned to be attached to the plan. The foundation plan shows the bottom of the footer to be only two feet below the grade of the wharf while Section 707c requires ordinarily that such a foundation be extended at least four feet below the surface of the ground. However, Mr. Plako says that the wharf is filled with large stones which it would be difficult to excavate and which would not insulate with the frost. Under such circumstances the actual designer should state these conditions either on a separate print or in a letter to accompany it and we will be able to accept the much lower foundations on that basis.

Another blank statement of design is enclosed to the Wilson Company for their designer to sign as to the structural steel design, and somewhere on one plan or the other the total load of the fuel tanks should be indicated. As far as I can see no welding is involved either in the field or the shop. I do remember that welding was present in the supporting frame that failed a few months ago and that some of the welded joints failed although probably no fault of the joints as it was probably called upon to carry stresses never intended. If welding is involved in this job to any degree involving direct stresses in the plates, the Wilson Company's statement of design should include the design of the welds, and we should receive the assurance from them that the shop welders were qualified under the American Welding Society Qualification Procedure. Welders under the Building Code are required to be certified in this city, having been first qualified under the procedure of the American Welding Society. We have no certified welders in the city at present so that field welding presents some difficulties.

Very truly yours,

Inspector of Buildings

Subject: Construction and erection of  
two 10,000-gallon storage tanks for  
"Tarvia" and the steel supports there-  
for at 450 Commercial Street (Stor-  
divant's Wharf)

Gentlemen:

Mr. Lase, Barrett Superintendent locally, has applied for a building permit to cover the above work, and is preparing a location plan showing the location and arrangement of the proposed tanks with relation to the dock and other nearby structures.

Our Building Code, Section 104B3 requires that designers of structural steel and reinforced concrete shall furnish with the design plans, a statement of design signed by the actual designer and to be attached to the design plans.

I take it that the Barrett Engineering Department has designed the reinforced concrete foundations and their engineer should therefore sign the statement of design to be attached to their plan of the foundations—B397620. I am enclosing a blank statement to be filled in, signed and returned to be attached to the plan. The foundation plan shows the bottom of the footer to be only two feet below the grade of the wharf while Section 307c requires ordinarily that such a foundation be extended at least four feet below the surface of the ground. However, Mr. Lase says that the wharf is filled with large stones which it would be difficult to excavate and which would not heave with the frost. Under such circumstances the Barrett designer should state these conditions either on his revised print or in a letter to accompany it and we will be able to accept the shallower foundations if that be the

Another blank statement of design is enclosed to the Wilson Company for their designer to sign as to the structural steel design, and nowhere on one plan or the other the total load of the full tanks should be indicated. As far as I can see no welding is involved either in the field or the shop. I do remember that welding was present in the supporting frame that failed a few months ago and that some of the welded joints failed although probably no fault of the joints as it was probably called upon to carry stresses never intended. If welding is involved in this job to any degree involving direct stresses in the joints, the Wilson Company's statement of design should include the design of the welds, and we should receive the assurance from them that the shop welders were qualified under the American Welding Society Certification Procedure. Welders under the Building Code are required to be certified in this city, having been first qualified under the procedure of the American Welding Society. We have no certified welders in the city at present so that field welding presents some difficulties.

Description: On occasion of the failure of foundations or steel bent support of two 10,000 gallon tanks for storing asphalt or tar, it is discovered that considerable work has been done recently without a permit first having been secured, the contractor being Louis A. Townsend who was injured in the collapse. It appears that the extent of the work was construction of a new foundation pier at either end, relocation of two 10,000 gallon tanks closer to the harbor and elevating them on the steel frame to make room for a new tank which was installed on the old foundation next to the battery of larger storage tanks. It appears likely that the failure was due to fault in the erection rather than that of design. The new pier has been set practically on top of the ground on a slab of larger area and the steel work has not been anchored to any of the piers. The westerly of the two new piers had settled considerably and tilted a little with the top toward the east, but whether or not this change in foundation occurred before the accident or after the heavy tanks were partially full of tar and had dropped onto the pier is not certain. The most northerly of the tanks on the steel structure was full of tar (10,000 gals.) at the time of the accident, and the other was being filled, having about 6,000 gallons in it at the time. Reference BP 38/2199.

APPLICATION FOR PERMIT

Permit No. 4120

Class of Building or Type of Structure Third Class

AUG 4 1928

Portland, Maine, August 1, 1928

To the INSPECTOR OF BUILDINGS, PORTLAND, ME.

The undersigned hereby applies for a permit to erect alter or repair the following building structure equipment in accordance with the Laws of the State of Maine, the Building Code of the City of Portland, plans and specifications, if any, submitted herewith and the following specifications:

Location 428 Commercial Street Within Fire Limits? yes Dist. No. 2
Owner's or Lessee's name and address Hy-Grade Beer Co., 428 Commercial St. Telephone 2-7855
Contractor's name and address Owner Telephone
Architect Plans filed no No. of sheets
Proposed use of building Warehouse and garage No. families
Other buildings on same lot
Estimated cost \$ 10. Fee \$ .25
Description of Present Building to be Altered
Material frame No. stories 2 Heat stove Style of roof Roofing
Last use Warehouse No. families

General Description of New Work

To enlarge 5' opening making it 8' for garage doors. (8x8 header-dressed)

Because no fire resistive partitions and no self-closing fire door with raised threshold is to be provided between the garage space and the balance of the building, the applicant agrees that, before heat is again needed in the building, a type of garage heater approved by the Chief of the Fire Department will be installed under a permit from the Inspector of Buildings, and the present stove will be removed; and the applicant further agrees that no other flames or heating devices of any kind will be installed in the future unless protection is provided as required by the Building Code.

CERTIFICATE OF OCCUPANCY
REQUIREMENT IS WAIVED

It is understood that this permit does not include installation of heating apparatus which is to be taken out separately by and in the name of the heating contractor.

STATEMENT ACCOMPANYING APPLICATION OF THE BARRETT CO. FOR A BUILDING PERMIT TO  
COVER ERECTION OF TWO STEEL STORAGE TANKS FOR THE STORAGE OF 250,000  
GALS. EACH OF FINISHED ROAD MATERIALS, THIS APPLICATION  
BEING DATED NOVEMBER 25, 1936.

December 1, 1936

1. This statement is to be considered as much a part of the application for the permit as though written upon the application form itself, but failure to mention any requirements of the Building Code herein shall not relieve owner or contractor from complying therewith.

2. The owner hereby agrees for itself, its successors and assigns that these storage tanks referred to in the application for the building permit will never be used for the storage of any substance or gas having a flash point below 200 degrees Fahrenheit or having a specific gravity which would indicate that the substance or gas so stored was of equal weight or lighter than water, unless the full requirements of the Building Code or Fire Prevention Code of the City of Portland, Maine with regard to the storage of flammable liquids, materials or gases shall have first been complied with.

The Barrett Company

W. L. Kingston

File: Rec. 83601-I

December 1, 1936

Mr. Benjamin M. Hermes,  
Assist. Secretary  
New England Insurance Exchange  
40 Broad Street,  
Boston, Mass.

Dear Mr. Hermes:

I am very grateful to you for your letter of November 30 concerning the proposition of two storage tanks for the Barrett Company in this City, and especially for your suggestion of an agreement on the part of the Barrett Company that the tanks shall not in the future be used for the storage of so-called flammable materials.

Your suggestion is being acted upon and we hope to be able to issue the permit for the tanks in a few days.

Very truly yours,

Inspector of Buildings

MCD/H

File: Rec. 8360B-I

December 1, 1936

Mr. W. F. Kingston,  
c/o The Barrett Co.,  
Beacham Street,  
Everett, Mass.

Dear Sir:

With relation to the proposed storage tanks for the Barrett Company on Sturdivant's Wharf in this city, I have just received a letter from the New England Insurance Exchange which gives the assurance that the material which the Barrett Company plans to store in these tanks has a flash point of more 200 degrees Fahrenheit and that the material is heavier than water.

It is clear, therefore, that these tanks should not be classified as tanks intended for the storage flammable liquids, and I am therefore able to issue the building permit covering their construction without the requirement of dikes or special distances from other structures or property lines.

So that we may be fully protected in the future, however, will you be kind enough to sign the attach statement on behalf of the Barrett Company and return it to this office as promptly as possible.

Very truly yours,

Inspector of Buildings

McD/H

September 12, 1933

The Barrett Company  
3 Sturdivant's Wharf  
Portland, Maine

Gentlemen:

An inspector from this office reports with relation to the 3-car metal garage at 3 Sturdivant's Wharf which you apparently own, that a large stove has been set up in this garage with a metal smokepipe projecting through the side wall of the building.

This garage was erected in 1931 under our permit No. 31/237. No mention was made in the application for the permit of any heat in the building. An unprotected heater such as you have installed is not permitted in a garage under the Building Code, and a building permit from this department is required before any heating device of any description is placed in any garage. The metal smokepipe projecting through the side wall of the building is also forbidden by the Building Code.

Please have both stove and smokepipe entirely removed on or before September 28, 1933.

Very truly yours,

Inspector of Buildings.

Whittradge Portable Buildings Company  
West Lynn, Mass.

Gentlemen:

We have on file attached to an application for a building permit to cover the erection of an all metal garage for The Barrett Company, your blue print dated December 19th, 1930. Upon rough analysis of the roof trusses, some of the members do not appear to be of sufficient strength.

Our Building Code calls for a live load of 25 lbs. per square foot, and we are using a dead load of 2 lbs. per square foot but we are neglecting the action of the knee braces as far as strengthening the truss members are concerned or reducing the span.

Please let us have a copy of your analysis of this truss and also a statement of design for this building as called for by our Building Code and reading as follows:

These plans (.....sheets) and the specifications accompanying the same, covering the erection of (name of building or structure) were designed and drawn up by the undersigned according to the latest rules of engineering practice and to comply with the allowable working stresses, floor loads, etc., required by the building code of the City of Portland.

(Signature).....

By.....

We should hear from you without delay as the Barrett Company are apparently about to start their project.

Very truly yours,

Inspector of Buildings.

BENENSON BUILDING  
165 BROADWAY  
NEW YORK

June 6, 1931.

Mr. Warren MacDonald,  
Inspector of Buildings,  
City of Portland,  
Maine.

Dear Sir:

ALL CONTRACTS ARE SUBJECT TO THE APPROVAL OF THE HOME OFFICE AT ERIE, PENNA. AND ARE CONTINGENT UPON STRIKES, ACCIDENTS, DELAY IN MILL DELIVERIES AND OTHER OCCURRENCES BEYOND OUR CONTROL. ALL QUOTATIONS ARE MADE FOR PROMPT ACCEPTANCE.

At the request of Mr. W. F. Kingston, Superintendent of the Barrett Company at Portland, we are enclosing application for permit for the installation of a steam boiler.

We regret very much that this was not filed at the proper time, but this matter was not brought to our attention.

We also enclose check for \$1.00 to cover the usual fee.

Yours very truly,

ERIE CITY IRON WORKS

IN YOUR REPLY KINDLY  
REFER TO FILE

June 4, 1931

Mr. Warren McDonald, Insp. of Bldgs.,  
City of Portland,  
City Hall,  
Portland, Maine.

Dear Mr. McDonald:

With reference to your letter of June 2,  
I was very much surprised to learn that application  
had not been made for the installation of boiler  
at our Portland Plant.

This boiler was installed by The Erie City  
Iron Works and when placing our order with them we  
took special care to inform them that no work was  
to be commenced until the necessary application to  
you had been made and authority granted to proceed  
with the work.

Since the boiler had been installed and  
nothing was said to us about the application, we  
had assumed that this matter had been attended to.

We regret this slip-up very much and are  
issuing instructions to our foreman in charge of  
the Portland Plant - Mr. A. A. Harding, to submit  
application to your office at once.

Very truly yours,  
THE BARRETT COMPANY

*Mr. S. gave him  
form*

31/236-I

June 2, 1931

The Barrett Company  
Beacham Street  
Everett, Mass.

ATTENTION: Mr. W. F. Kingston

Gentlemen:

With reference to your plant now being established at the rear of 430 Commercial Street, this City, we find that the boiler in the boiler house has been installed without first securing from this Department a separate permit to cover the installation as required by law.

I tried to explain this matter to Mr. Kingston on one of his trips to Portland, but apparently there is still some misunderstanding about it.

Will you be kind enough to have the person responsible for the installation of the boiler make application at this office for a belated permit covering the installation on or before June 10th, 1931?

Very truly yours,

Inspector of Buildings.
