SM 12-53 ☐ PORTLAND HEALTH DEPT. PLUMBING INSPECTION

CITY OF PORTLAND, MAINE  
DEPARTMENT OF BUILDING INSPECTION

Room 21, City Hall

Gentlemen:

In connection with the installation of oil burning equipment as indicated in statement below, please sign this statement and return to this office as promptly as possible so that the permit may be issued if everything else is found in order, retaining the copy for your file.

Very truly yours,

(Signed) Warren McDonald  
Inspector of Buildings.

\* \* \* \* \*

1. This statement is to become as much a part of the application for a permit to cover installation of oil burning equipment for W. D. Libby at 848 Congress Street, as though written on the application form.

2. A switch or other manual control capable of completely stopping flow of oil to the burner will be provided, such device to be so located as to be conveniently reached and operated without being exposed to danger that may exist at or near the burner. If feasible this switch or similar device will be located at or near the top of the cellar stairs. In case the burner is of a type without electrical controls, a quick-closing valve will be provided in the oil supply line so located and arranged that the valve may be manually closed from the top of the cellar stairs, or outside of the room where the burner is located or from outside the building.

3. A quick action, self-closing valve designed to close at 160 to 165 degrees Fahrenheit will be provided in oil supply line.

4. Readily accessible shut-off valves, one of which may be the self-closing valve indicated in No. 3 if capable of manual operation, will be installed in oil supply line near each burner and close to supply tank. Shut-off valves will be installed on each side of oil strainers which are not a part of the oil burner unit or which are connected to oil burner unit without intervening piping or tubing. Shut-off valves will be provided both on the discharge side and the suction side of oil pumps, if any, which pump directly to the burner but which are not a part of the burner unit.

5. If there is to be a shut-off valve in the discharge line of an oil pump, a suitable pressure relief valve will be connected into the discharge line between pump and shut-off valve and arranged to return surplus oil to the storage tank or to by-pass it around the pump.

Harris Oil Co  
Installer
