June 12, 1948

Mrs. Flora T. Young
89 Carleton Street
Mr. G. D. Salisbury
47 West Street

Dear Madam & Sir:

Complete information to show compliance with the Building Code for the changes was not filed with the application, but it is understood that these changes are the result of a order from the Chief of the Fire Department to improve the means of egress from the building under State Law and Safety Ordinance, so the permits are issued without sufficient information in order that the work may not be longer delayed.

If you have not already done so it would be well to check with Fire Department Inspector to make sure that the changes as actually proposed will satisfy their requirements as issuance of these permits is not to be taken as indication that the Chief's order is being complied with.

There is no indication on the application to change location of the lower run of rear inside stairs on number 89 side as to relative location of the foot of the stairs and any existing partitions or doorways, but all such features should clear the nosing on the lowest tread of the stairs by at least 3". There are no indications of the width of tread or height of riser of the new stairs, but the Building Code normally requires a tread no less than 9" wide (measured from riser to riser) and risers no more than 8 1/2" high (measured from tread to tread), unless the Chief of the Fire Department makes some exception in his order or supplementary thereto, you are expected to follow this maximum height of rise and minimum width of tread. In any event a handrail is required on at least one side of the new run of stairs. Any new partition work and any new ceiling work exposed in the stair hall or to the stairs require plaster on non-burnable lath—the partitions to be covered with this material on both sides.

Before any such partition or ceiling work is covered from view, the contractor is required to notify this office of readiness for closing-in inspection and not to cover anything up until our certificate of closure (green tag) has been left at the job.

You have indicated the door to be provided in the new opening in central wall on third floor to be a fire resistant door, self-closing. Unless specific allowances otherwise are made by the Chief of the Fire Department (if these allowances have or are made we should be notified of them), this door and frame are required to be made as indicated in Section 303-c-4 of the Building Code (copy enclosed to Mr. Salisbury), noting that if the wall in which introduced is a masonry wall the frame is required to be of structural metal. The term self-closing means a door which is normally in the closed position and capable of closing at once of itself when released after opening. For this purpose a liquid door closer is required.

Very truly yours,

WHD/s
Inspector of Buildings
