Memorandum from Department of Building Inspection, Portland, Maine

183 Clark St.—Installation of fuel oil storage tank for Mrs. John
O. Burke by Harris Oil Co., installers

Before tank and piping is covered from view, installer is required to notify this department of readiness for inspection and refrain from covering the tank up until approved.

This tank of 550 gallons capacity is required to be of steel or wrought iron no less in thickness than No. 12 gauge and before installation is required to be protected against corrosion, even though galvanized, by two preliminary coats of red lead and heavy coat of hot asphalt, or equivalent.

Pipe lines connected to underground tank, other than tubing and except fill line and test wells, are to be provided with double swing joints arranged to permit the tank to settle without impairing the efficiency of the pipe connections.

Owner and installer will have to bear the responsibility for the structural capacity of the tank to support loads from above such as heavy motor trucks.

If tank will be so located as to be subjected to the action of tide water or "ground" water, adequate anchorage or weighting must be provided to prevent "floating" when tank is empty or nearly so.
