Mrs. Anna Vaccinano,
345 Congress Street,
Portland, Maine

Subject: Alterations of the building
at 215 Danforth Street to make an apart-
ment in place of existing store space in
the 1st story, thus making 4 apts. in the
building

Dear Madam:

Mr. Worster filed an application in your name to make the above change. The requirements of the Building Code are such as regards safety of exits and fire protection, that I am unable to issue the permit until you or he has furnished a complete architectural plan of this first story to be altered, showing the present situation in detail, the proposed changes of all kinds, and the proposed arrangement intended after the changes have been made.

This plan should also show the distance from the exterior walls of the first story to all of the property lines both side and rear, and it must particularly show all stairs leading to the cellar and all stairs leading to the upper story.

It is absolutely necessary that you have a man make this plan who thoroughly understands how to make plans and who has sufficient knowledge of plan making, buildings and the Building Code to understand for himself what the requirements of the Code may be as applied to your job. The plan must be to a definite scale, preferably one-quarter of an inch to the foot, and should be in the shape of a blueprint with all of the information on it printed from the original, not marked on in crayon or otherwise.

A great deal of time is being wasted on the part of property owners, builders, and of this Department by an attempt to avoid making a plan that is intelligible and clear to be filed in our records to serve as a basis of issuing the permit, as I am required to do by law.

Will you be kind enough to proceed at once to have these plans made?

It hardly seems possible that you can do the work that you plan for anything like the sum of \$25. indicated by Mr. Worster on the application. Both he and you are required by law to give the total estimated cost of all such work, including all labor and material. Please estimate that and change the estimated cost to a reasonable one, and if it is not substantially more than the figure that Mr. Worster has shown, it will be necessary for you to show a detailed estimate including the different kinds of material, the quantities and price of each and the amount of labor and the cost of that per hour.

In the meantime it is unlawful for you or him to proceed with any of this work until the permit card is actually in your possession and posted upon the premises.

Very truly yours,

WMC/H

Copy to Mr. Benny Vacchiano, 208 Danforth Street, October 30, 1935

Mr. John S. Clark
12 Briggs Street
Portland, Maine

Dear Sir:

Enclosed is the building permit covering alterations in the building of Mr. Benny Vacchiano at 210 Danforth Street. The following matters are called to your attention:

Mr. Vacchiano has agreed to use the usual weather boarding to be painted instead of asphalt roofing on the side walls as shown originally on the application.

The concrete slab foundation for the addition is not satisfactory. It will be necessary to provide a foundation extending four feet (4') below the grade to get below frost. These foundations may be masonry piers, a masonry wall, iron pipe of suitable size on a masonry footer, or cedar posts.

With relation to the steel beams which are to be introduced to take the place of the present posts in the store, it is necessary that the top flanges of these two 12-inch I-beams be fastened by lag bolts to the present wooden girders in the roof at each point where these wooden girders get their bearings on the steel beams, and that the ends of the I-beams be bolted carefully to the 4x8 posts that are to be used to support them. Care must be exercised at this point because the bolts will go in to the end of the grain. I recommend that you use either Long Leaf douglass fir or better still hard pine for these posts, as otherwise the margin of safety for the posts acting as columns is not very large. These requirements are called to your attention so that you may be sure to have the steel punched in the shop and avoid the extra expense of field work.

The wooden girders under the present roof appear to be 4x8 on spans of ten and eleven feet. This figures very light, but since there are no definite evidences of sagging, we shall not compel you to strengthen these wooden girders unless such evidences appear while the work is going on. It would be much better, however, if you could see your way clear now of making these wooden girders heavy enough to figure out.

Please be governed accordingly.

Very truly yours,

Inspector of Buildings.

W/HO
Enc.

#9653-T

October 30, 1933

In consideration of building permit issued by the City of Portland to cover alterations of the combined stores and tenement house building at 210 Danforth Street, corner of Clark Street, and in view of the fact that the proposed alterations include a one story addition along the Clark Street frontage so close to an existing bay window in the first story of the tenement house part that the windows in this bay will not have outside of them the width of yard space required for rooms in tenement houses by the Building Code of the City of Portland, I hereby agree for myself, my heirs, and assigns, that the room to which this bay window is attached will never be used in any manner for living quarters unless the light and air requirements of this room are made to comply with the requirements therefor of the Building Code of the City of Portland.

This agreement is to be considered as much a part of the application for the building permit intended to cover the alterations now proposed as though written upon the application form itself.

WITNESS:

Harriet L. Clowes
