Memorandum from Department of Building Inspection, Portland, Maine

181 Massachmootts Avenue—Installation of oil burning equipment for Victory Village, Inc. by Myor Mints, installer

Before tank and piping is covered from view, installer is required to notify Fire Department of readiness for inspection and refrain from covering the tank up until approved.

This tank of 4,000 gallons capacity is required to be of steel or wrought iron no less in thickness than No. 7 gauge and before installation is required to be protected against corresion, even though galvanized, by two preliminary coats of red lead and heavy coat of hot apphalt, or equivalent.

Pipe lines connected to underground tank, other than tubing end except fill line and test wells, are to be provided with double swing joints arranged to pensit the tank to settle without impairing the efficiency of the pipe connections.

Concrand installer will have to bear the responsibility for the structural capacity of the tank to support loads from above such as beavy motor trucks.

If tank will be so located to be subjected to the action of tide water or "ground" water, adequate anchorage or waighting must be provided to prevent "floating" when tank is capty or nearly so.
