Memorandum from Department of Building Inspection, Portland, Maine

Ryefield Street, Peaks Island (Charles Franco)—Alteration of open rear  
piazza for and by Mr. Franco—10/7/50

Please note that check of this job against the Building Code has been made using the data filed by the owner on the application for the permit, and that data should be closely followed unless otherwise indicated below or unless this office is consulted to make sure the change complies with the requirements.

Note that the 4x6 sill indicated on the application is required to be solid lumber in cross section, not built up of two 2x6's, and would normally be set with the 6" dimension upright and lap splices used at the corner piers.

The floor joists are either to be supported upon the top edge of the sills or upon no less than 2x3 nailing strips spiked to the inside face of the sills, the floor joists if necessary being notched over the nailing strips. The 2x6 floor joists indicated on application are larger than required by the Building Code. They may be used of course, but the Building Code would allow 2x4's not more than 18" from center to center with the 4" dimension upright.
