Mr. George Jordan
Pleasant Ave.
Peaks Island

Gentlemen:-

Building permit is issued herewith subject to the following conditions, after telephone conversation with Mr. Jordan.

There is not enough information on the application to establish compliance with the Building Code as regards strength. Mr. Jordan says that there is no second floor of the dwelling but there is a ceiling at least over the room where the new window is to be cut in. I understood him to say that the framing of the building is such that both the roof rafters and the joists supporting the ceiling will be supported over this new window. We still are unable to figure the load which will come upon the new header because we do not know the width of the dwelling.

The application says that the window will be five feet wide with a header over the top of 2-2x4's. Mr. Jordan says, however, that the double 2x4 plate under the rafters is only about a foot above the new header, and he proposes to insert short studs or uprights between plate and header.

We are unable to check the strength of this arrangement, but it will probably work out alright unless there is some plan later for providing a second floor with its additional loads. In that case it is recommended that the plate and header be braced in the usual manner to develop more strength. Of course there will be short uprights or studs under each end of the new header.

Very truly yours,

Warren McDonald
Inspector of Buildings

WMC/D
