Rept. D4800-I

May 24, 1941

Mr. Irvin McGlinchey,  
Herman Avenue,  
Peaks Island,  
Portland, Maine

Dear Sir:

There is too much uncertainty as to just how you intend to frame and otherwise construct the poultry house proposed on your property on Herman Avenue, Peaks Island, for me to issue the building permit and have any assurance that the building will comply with Building Code requirements after it is finished. My duty requires that I shall have reasonable certainty in my mind that the project will comply with the Building Code before I issue the permit.

Your application for the building permit does not indicate what type of floor is to be used in the building. If this is to be a wooden floor, you should indicate the size, spacing and spans of the floor joists. You have not indicated anything about the location of the cedar posts to be used for foundation. We have to know the spacing of these posts because the 2x8's resting upon them will have to act as a beam and carry perhaps half of the floor load and certainly half of the roof load. You have shown 2x8 roof joists, 2 feet from center to center on a 10 foot span, but you have apparently told Mr. Hamilton of this office that you would use 2x8's, 18 inches from center to center on a 12 foot span.

This latter arrangement of roof joists would satisfy Building Code requirements but looks rather heavy considering the size of the building. If you could get advice from someone familiar with the economical way to frame buildings, you can certainly work out a lighter appearing roof construction than these 2x8's and still satisfy Building Code requirements. We are unable to advise you as to just how to frame this building as this is a public office and we cannot offer a service to you that we cannot offer to all. Obviously it is not possible for this small department to design the frame of the buildings constructed in the city.

Please let us know by filling in on the application or on the plan as follows:

1. What you are to use for weatherboarding on the outside of the building and whether or not it is to be new material or second-hand?
2. Of what material will the floor be made and if of wood what will be the size, spacing and spans of the floor joists and any intermediate supports under the floor in the center of the building? Also what will be location and spacing of cedar posts?
3. Give the arrangement you intend to follow on the roof construction together with the actual sizes, spaces and spans of the roof joists that you intend to use.

Very truly yours,

Inspector of Buildings
