35/1321-1

Copy to Gould-Farr . . ., 70 Free Street

October 19, 1933

Mr. Maurice Pines
118 Bedford Street
Portland, Maine

Dear Sir:

An inspector from this office in checking over your oil burner recently installed at 118 Bedford Street, found two conditions with relation to the fuel oil tanks which we are inclined to believe are not entirely safe, and which certainly are not up to present day standards for safety.

The vent pipe serving the two tanks is only $\frac{1}{4}$ -inch pipe size whereas the minimum now permitted on new installations is one and one-quarter inch pipe size. The size of the vent pipe is of considerable importance as regards safety and also as regards maintenance of the tanks. The fill pipe does not extend to the outside air, but terminates inside the cellar close to a fuel door opening. The present requirements and the latest recommendation for safety are that the fill pipe should extend completely outside of the building in a rigid and permanent position so that there may be no possibility of oil spillage inside of the cellar. While this office has no authority to require that you make these improvements, I strongly recommend that you do so.

Very truly yours,

Inspector of Buildings.
