APPELLANT

602.24 C(3)(b)(1) Space and Bulk Variances other than for Dwelling Unit Conversions:

- (a) The subject lot or parcel is exceptional as compared to other lots or parcels subject to the same provision by reason of unique physical condition, including irregularity, narrowness, shallowness, or substandard or marginal size; exceptional topographical features; and other extraordinary physical conditions peculiar to and inherent in the lot or parcel in question, which amount to more than a mere inconvenience to the owner.
- (b) The aforesaid unique physical condition existed at the time of the enactment of the provision from which a variance is sought or were created by natural forces or were the result of governmental action.
- (c) The carrying out of the strict letter of the provision from which a variance is sought would deprive the owner of the lot or parcel in question of substantial use and enjoyment of this property in the manner commonly enjoyed by owners of other lots or parcels subject to the same provision.
- (d) The hardship is not merely the inability of the owner or occupant to enjoy some special privilege or additional right not available to owners or occupants of other lots or parcels subject to the same provision.
- (e) Property in the same zone or neighborhood will not be adversely affected by the granting of the variance and the granting of the variance will not create conditions which would be detrimental to the public health or safety.

MEMORANDUM FROM DEPARTMENT OF BUILDING INSPECTION, PORTLAND, MAINE

October, 1970

Locations: 263 Brighton Ave.

Before tanks and piping are covered from view, installer is required to notify the **Fire Dept. Headquarters** of readiness for inspection and to refrain from covering up until approved by the **Fire Dept. Headquarters**

These tanks of ⁽¹⁾500 gallons capacity are required to be of steel or wrought iron no less in thickness than # 12 gauge; and before installation are required to be protected against corrosion, even though galvanized, by two coats of tar, asphaltum, or other suitable rust-resisting paint, and special protection wherein corrosive soil such as cinders or the like.

Pipe lines connected to underground tanks, other than tubing and except fill lines and test wells, must be provided with double swing joints arranged to permit the tank to settle without impairing the efficiency of the pipe connections.

Owner and installer will have to bear the responsibility for the structural capacity of the tank to support loads from above such as heavy motor trucks.

If tank will be so located as to be subjected to the action of tide water or "ground" water, adequate anchorage or weighting must be provided to prevent "floating" when tank is empty or nearly so.
