

WARNING !!!

THIS BUILDING PERMIT IS ISSUED SUBJECT TO SPECIAL CONDITION:

THAT NO CONCRETE SHALL BE POURED IN FOUNDATION FORMS AND NO LAYING OF UNIT MASONRY IN FOUNDATION WALLS SHALL BE STARTED UNTIL NOTICE HAS BEEN GIVEN AT THE DEPARTMENT OF BUILDING INSPECTION OF READINESS 'TO START ACTUAL MASONRY WORK, AND UNTIL RE-CHECK OF

LUCATION HAS BEEN MADE BY INSPECTOR, Original markings of corners of lot and especially stakes on street line set by Dept. of Public Works must be kept intact and easily accessible for re-check--not covered by excavated earth

or building materials. Otherwise the "go-ahead" cannot be given. Dept. of Public Works cannot re-set their stakes.

Obliquely the notice for re-check must be given at such a time as to allow reasonable opportunity to make re-check.

Warre's McDonald Inspector of Buildings

The Mines Corporation 220 Cumberland Avenue Portland, Maine

Subject: Permit for construction of one femily dwellies with attached perago at 376-362 Brigatos Avenue

Gentlezons

The permit for the above work is issued mercuith based on plans filed with application and subject to the following:

- 1. There were to be some confusion as to the type of all to be used, the application calling for a 4x6 while the plan shows a box sill. Either one or the other will meet Building Cous requirements, but it should be borne in mind that, if a half will is used, the stuns in the outside walls are required to extend down to the oill rather than to rest upon a shoe cu top of the floor joists as is yearmissible with the box sill. In sith a case the stude in the second story carrying partition and in ed and rear walls he that story are required to go down to the plates and girt thou and not be suppressed on top of the second floor tichard.
- 2. The 6x8 full size from an epster of agent neven fact as given in application will not figure out. The 6x 3 dressed hemlock as shown as plan is required and gust be crovided.
- 3. Presumably the Exp celling timbers and End rafters, each diff on centers as given in an ilection are to be used rather than the Exp, 16" on centers in both rafters and cailing timbers as shown on plan. Either combination will work out all right, but a combination of each will not do so because of the difference in spacing.
- Out 4. While the application starts that the building is to be built according to Standard Plan B, the plane filed the application bear little reserve to the Standard Plan B which we have on file. Evidently an error has occurred somewhore, so the note concerning Shandard Plan B has been crossed from the application.
- 5. The ArlO beam indicated on : An for support of second story across bay window opening will not figure out. We less than a talk dressed Douglas Fir is required for this opening and remait is issued on the basis that it will be provided.

Very truly your :

AJS/G
