Memorandum from Department of Building Inspection, Portland, Maine

19 Belmont Street-Construction of new piazza for Ralph Soule by Burnham-McLellan-
2/19/47

To Owner and Builder:

The plan indicates a built-up beam from corner post to corner post to support the outside ends of the roof joists while application indicates a 4x6 plate with 6" dimension upright. It is assumed that the 4x6 is to be used, that the corner posts will go down to a bearing upon the sills and that the sills will be anchored to the piers by metal dowels or otherwise.

While we have not been interpreting the clause of the Building Code about extending foundations 4' below the surface of the ground as applied to foundations under the lower end of steps on a single family dwelling house obviously occupied by the owner, unless the bottom of these steps will be supported upon a well established concrete walk without cracks in it, I recommend that a concrete pier be used extending no less than 4' below the surface of the ground. Often such a pier is made long enough and wide enough to form the lowest step and the stair stringers are supported on it well above the ground dampness.

WMD/J

CC: Mr. Ralph Soule
