File 34/1869-T

United Neon Display,
27 Monument Square,
Portland, Maine

Gentlemen:

With reference to Permit No. 34/1869 issued to you to cover erection of a sign for Lamkins Grill at 542 Forest Avenue, please consider this letter as an order to stop all work under this permit, since the structural frame of the sign does not satisfy our requirements for weight and thickness and because the punching of the angles, where they were supposed to be connected with the building, has weakened the angles to such an extent that the connection could not be considered adequate.

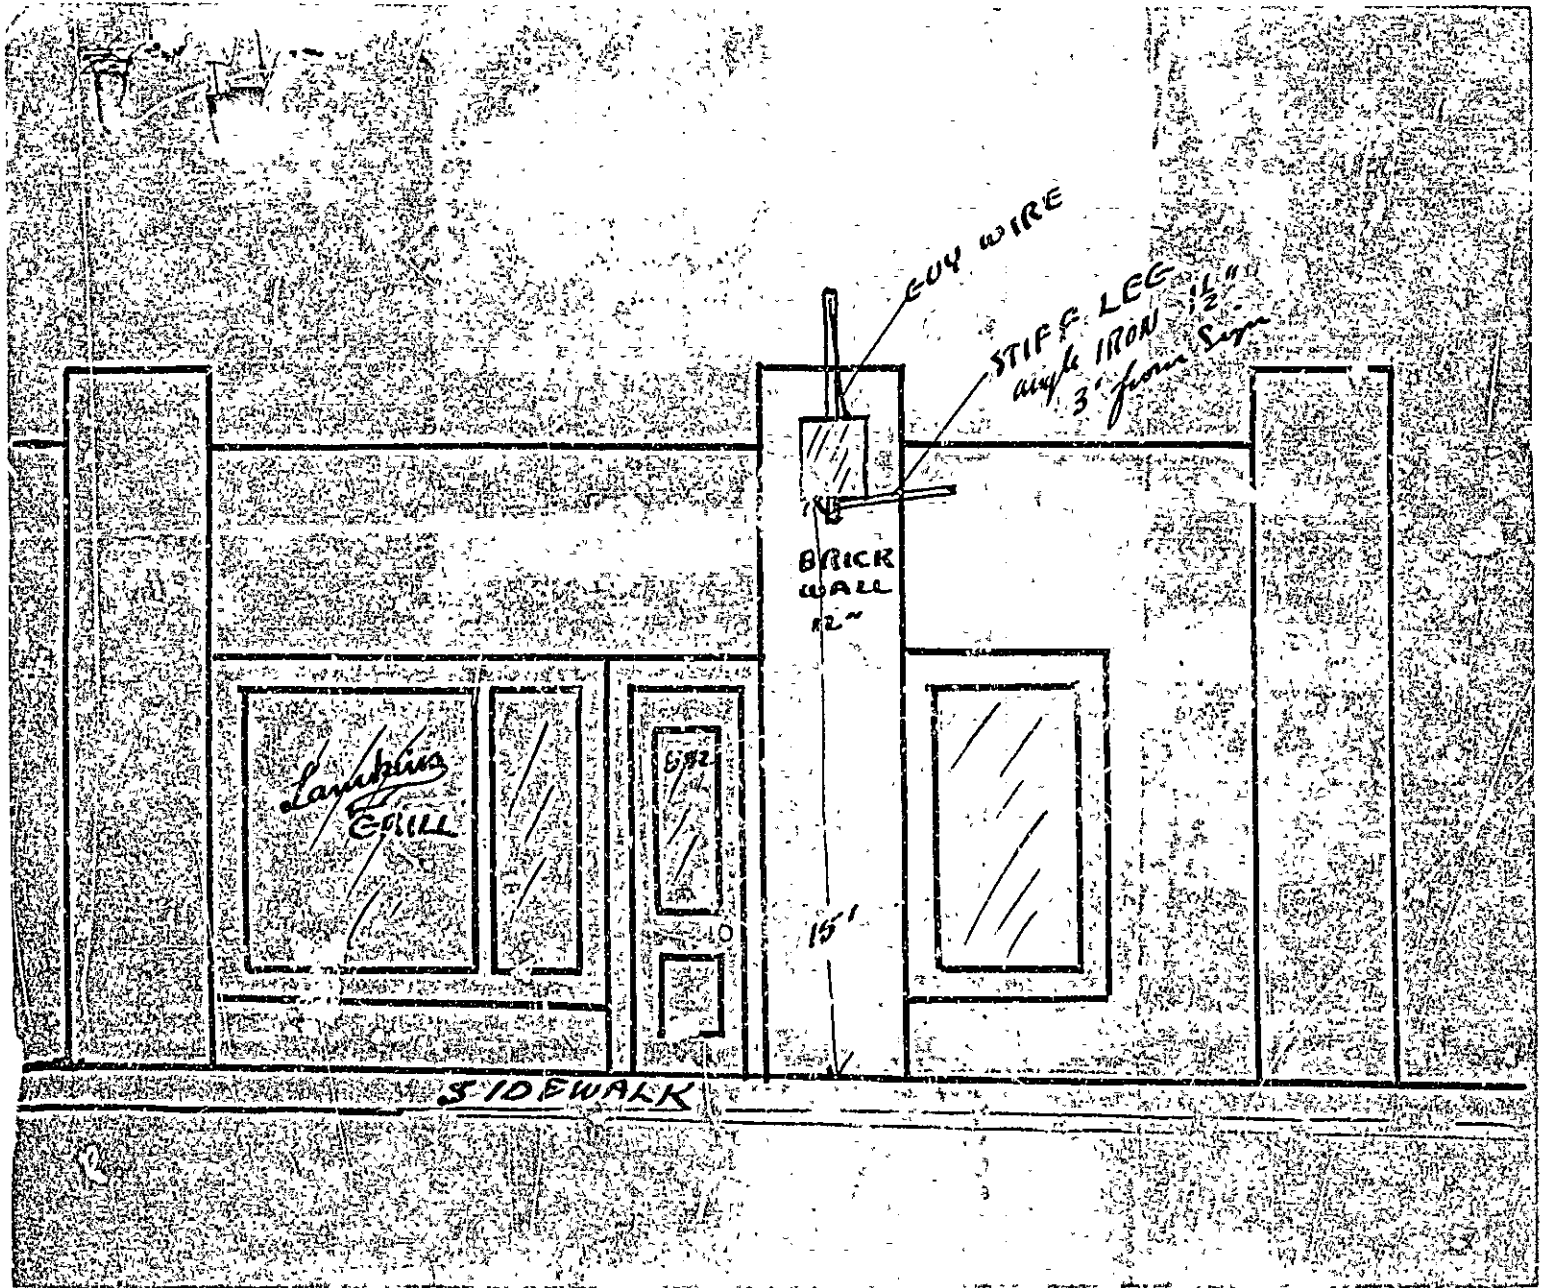

If you desire to rebuild the frame of this sign, a new sketch should be submitted with the application and after the sign has again been examined and found satisfactory, this stop order will be revoked. If, on the other hand, you do not wish to go ahead under this permit we will transfer the fee of one dollar to some other application that you may make in the future.

Please be governed accordingly.

Very truly yours,

Inspector of Buildings.

MAINE SAVINGS BANK

PORTLAND - MAINE

October 20, 1934

Mr. Warren McDonald
Inspector of Buildings
City Hall
Portland, Maine

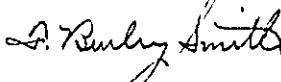

My dear Mr. McDonald:

In accordance with our recent telephone conversation I am writing to inform you that this Bank has started foreclosure proceedings on the Cameo Theatre building and the adjoining garage property on the corner of Forest Avenue and Ashmont Street.

Following your suggestion, we will install a suitable fence and will cement the alleyway from said lot to the rear of the building in order to help solve the problem presented by the addition now being constructed at the corner of the theater building.

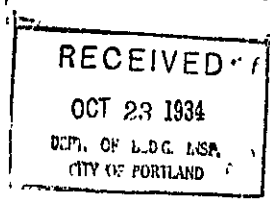

Whenever this Bank may obtain title through its foreclosure being perfected, the matter of changing lot boundaries in order to improve the hazard that the construction and occupancy of these buildings may present can be attended to.

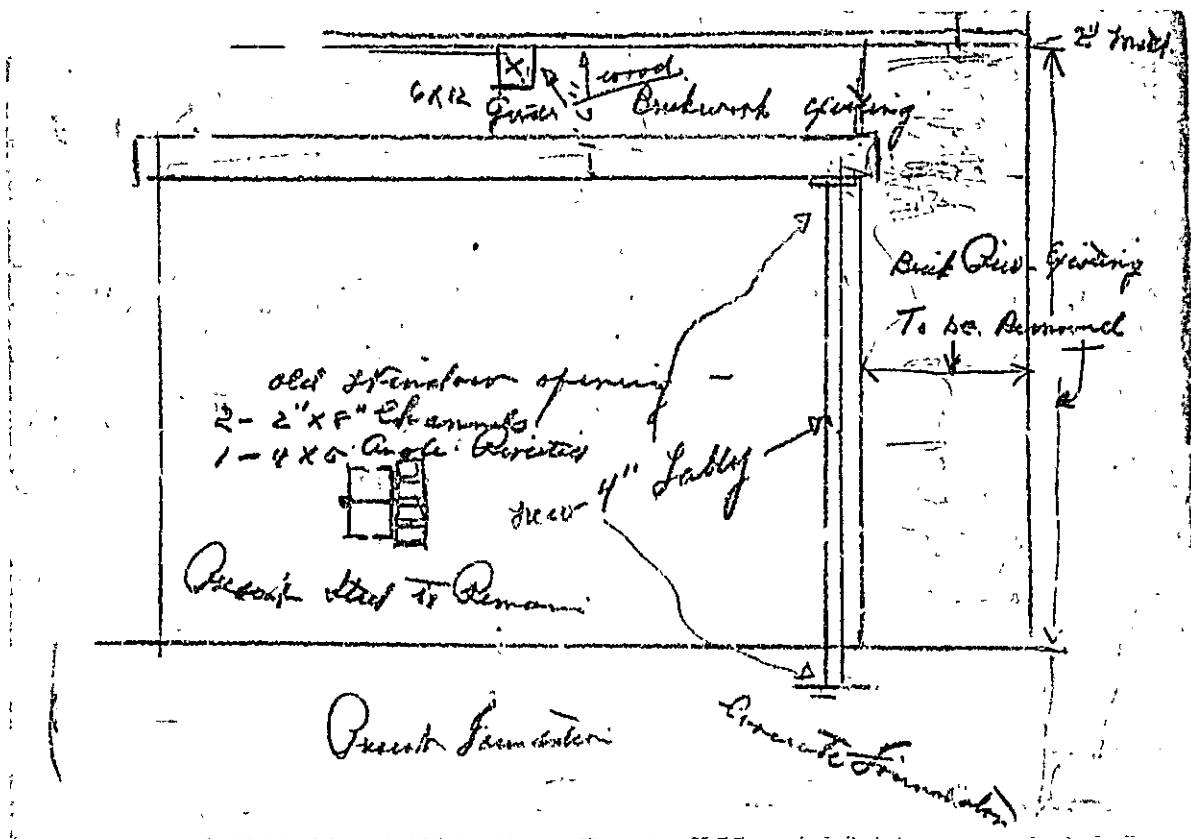

Respectfully yours,

F. Burley Smith
Secretary

May 2, 1933

The Forest Avenue Construction
504 Forest Avenue
Portland, Maine

Gentlemen:

Referring to the building at 552-542 Forest Avenue now being converted for use as a motion picture theatre, and to my letter on this subject of March 20th, 1933, a change in the requirements as regards sprinkler system and standpipe and hose will be acceptable to the Inspection Board. Referring to the fourth paragraph of the above mentioned letter, if an approved fire door is placed at the top of the boiler room stairs, thus cutting three fire floors between the boiler room and the auditorium, - one at the foot of the stairs, one at the top of the stairs, and one at the entrance to the main boiler room, and since the partitions both inside and outside of the main boiler room are to be of incombustible material, all sprinkler heads except those in the boiler room may be eliminated. Because of the small number of sprinkler heads to be served, the present water service will be satisfactory. The alarm valve should, however, still be provided. In lieu of the two inch pipe extending to the rear of the auditorium with an outlet and fifty feet of fire hose, it will be satisfactory to provide chemical fire extinguishers of a type bearing the approval of the Underwriters' Laboratories, Inc. and one extinguisher for every 1,000 square feet of floor area in the entire theatre or fraction thereof.

Very truly yours,

Inspector of Buildings.

AMENDMENT TO APPLICATION FOR PERMIT APR 27 1935

Portland, Maine, April 25, 1935

To the INSPECTOR OF BUILDINGS, PORTLAND, ME.

The undersigned hereby applies for an amendment to Permit No. 33/219 pertaining to the building or structure comprised in the original application in accordance with the Laws of the State of Maine, the Building Code of the City of Portland, plans and specifications, if any, submitted herewith, and the following specifications:

Location: 538-42 Forest Avenue Ward: B With the Fire Limits? no Dist. No.

Owner or Lessee's name and address: Forest Avenue Corporation, 504 Forest Ave.

Contractor's name and address: Francis P. Lee Construction Co., 58 Melbouras St., C-675

Plans file as part of this Amendment: yes No. of sheets: 1

March 30, 1953

The Forest Avenue Corporation
804 Forest Avenue
Portland, Maine

Attention: Mr. Frank C. Sparrow

Gentlemen:

We have issued to Mr. Francis P. Lee a building permit in your name covering alterations of the building at 832-842 Forest Avenue and converting the use of this building, formerly a garage, to that of a motion picture theatre. In the absence of complete specifications, the following details are called to your attention:

All four emergency exit doors, including two near the front of the building and two at the rear, are to be equipped with approved anti-panic hardware. Each door is to have an illuminated exit sign, showing red, with letters no less than six inches high. The same kind of exit signs should be over the main entrance doors at the front of the auditorium. These exit lights are to be on a single circuit and controlled by a single switch. The two exit doors at the rear of the building and the exit door on the south side near the theatre office are to be metal clad fire doors set in structural metal or metal covered frames. The stairs leading to the emergency exit near the screen are to be of stone, concrete, or iron, the treads no less than ten and one-half inches, the risers no more than seven and one-half inches, the treads to have non-slip surfaces and no nosing, and handrails should be provided on both sides of each flight of stairs.

The door leading from the passageway to the men's toilet room is required to be a self-closing fire door set in structural metal frame. By the term "self-closing" is meant a door that is normally closed and kept closed by means of a suitable check or other approved device. An automatic fire shutter is required at the ticket window in the brick wall between the entrance foyer and the theatre office.

A two-inch water service is to be run into the building, and a small automatic sprinkler system with suitable heads in the boiler room, in the men's toilet, and in the women's toilet, and also a suitable alarm valve is to be provided. This two-inch main is also to be extended to the rear of the auditorium where an outlet is to be provided with fifty feet of one and one-half inch fire hose and nozzle on a suitable rack satisfactory to the Fire Department.

The main alternate electric service to the building is to be installed in accordance with the

723/210-1

March 20, 1938

The Forest Avenue Corporation--2

The dimensions of the aisles are not indicated on the plans, but three feet and six inches is the minimum uniform width, and this was agreed upon with Mr. German several weeks ago. The slope of the aisles should not exceed one foot in five feet.

No wooden or combustible doors or trim is permissible in the auditorium.

The details of lowering the floor of the auditorium and the outside walls are not shown on the plan, it being the understanding that this could be worked out as the information as to the present condition became available. It is my recollection that the soil conditions, especially in the rear end of this building, were not very good when the original foundation was built, so that particular care should be exercised to provide the underpinning in an absolutely safe and permanent fashion. As soon as the existing conditions are known, this office should have details showing the present conditions and how the extending of the walls downward is to be accomplished.

Please be governed accordingly.

Very truly yours,

Inspector of Buildings.

February 7, 1933

Mr. Frank W. Sparrow
564 Forest Avenue
Portland, Maine

Dear Sir:

With reference to your inquiry concerning converting the building at 556 Forest Avenue, formerly used a garage, for use as a motion picture theatre. Although I have no plans showing the proposition except the original plan of the building filed at the time the building was built, I have carefully checked the proposed arrangement as you outlined it to me in the light of the Building Code requirements for theatres. This has been done under the assumption that the theatre would be for moving pictures only, and that there would be no stage and no dressing rooms. At your request, I have not consulted the other members of the Inspection Board, but have indicated in one or two places details which I think the Board is likely to require before giving approval to the license. Practically all of these notations, however, are requirements of law and cannot be varied by the undersigned or the Inspection Board. I have assumed that both side walls and the rear wall are five feet or more from the corresponding property line, and that the seating capacity of the theatre would be five hundred seats. If these assumptions are not correct, other adjustments may be necessary.

1. Two emergency exits, each at least five feet wide, are required, one located approximately in the center of each side wall, the doors in each case to be two metal covered or steel fire doors at least 6'4" in height, swinging outwards, equipped with anti-panic hardware and each leading to a court or walkway at least six feet in width and controlled by the lessee of the theatre, these walkways to extend with the same or greater width either to Forest Avenue or to the driveway in the back of the building. If stairs are needed to reach these exit doors on account of depressing the floor of the building, the stairs should be stone, concrete, or iron, the treads no less than 10 1/2", the risers no more than 7 1/2", the stairs at least six feet wide with non-slip treads and handrails on both sides. Red exit signs, illuminated, with letters no less than six inches high are required over both of these exit doors and also over the main entrance doors at the front of the auditorium, these lights to be on a single circuit and controlled by a single switch.

2. The partitions around the stores, which you propose in front, are required to be of brick eight inches thick, or either hollow tile or concrete blocks twelve inches thick with double standard fire doors at every opening between the stores and the theatre portion of the building. If the enclosure of the cellar stairs in the first story is of solid plaster without any woodwork in the enclosing partition, this will probably satisfy the Building Code. There should be, however, double standard fire doors between the heater room and the theatre, probably one

February 7, 1935

Mr. Frank W. Sparrow-2

fire door at the bottom of the stairs and another at the top of the stairs will suffice. Our records show that the fire door at the bottom of the stairs now does not work properly. We are forced to be very particular about the construction of these fire doors and they must conform with the detailed requirements of the National Board of Fire Underwriters. The Inspection Board may have something to say against opening the heater room stairs directly into the theatre. Since this building is closer than thirty feet to the buildings on either side, it will be necessary to brick-up all window and door openings in these side walls, save the openings for exit doors, or possibly it might be satisfactory to cover the windows on the outside with fire shutters.

3. There should be automatic sprinkler heads in the heater room and in the toilet rooms if they are not already there, and it is quite likely that the Inspection Board will desire sprinkler heads in the stores if there is to be any direct connection between the stores and the theatre. It is quite likely that the Inspection Board may desire that the sprinkler heads over the auditorium be made inoperative, as in case one of them should function accidentally, a panic would be likely to ensue. The Building Code requires a single standpipe and hose in the rear of the auditorium but I believe the Inspection Board would approve fire extinguishers in certain locations in lieu of this standpipe and hose.

4. Separate toilet rooms must be maintained for men and women appropriately marked.

5. An alternate electric service to the building should be provided if possible. If this alternate service is prohibitive, some system approved by the City Electrician to avoid the possibility of all current in the building failing will be required. Some sort of emergency exit lights will also be required. Some of the theatres use gas lights, and some of them use large electric lanterns served by batteries.

6. The arrangement of seats in the theatre will be limited by the Building Code and the width of aisles will be stipulated. If it appears that this project is likely to go ahead, a seating plan should be worked out as soon as possible to conform with the Building Code requirements and for the approval of the Inspection Board. A cross aisle at least five feet in width will be required across the auditorium from one side exit door to the other, and another similar aisle will be required between the front section and the rear section. The slope of the aisles should not exceed one foot in ten.

7. No wooden or combustible ceiling is permissible in the auditorium, and the ceiling over the auditorium should be at least twelve feet above the floor in every place. I did not get out for you how you propose to cover

February 7, 1938

Mr. Frank W. Sparrow--5

the ceiling of the auditorium. Metal lath and plaster would be satisfactory for this covering.

This examination has been made based on the assumption that there is to be no stage, no dressing rooms, etc., and without regard to any of the engineering features such as lowering the floor, raising the roof, and replacing the supports now afforded by the columns.

Very truly yours,

Inspector of Buildings.

NOTES

FILED

October 10, 1926.

Mr. L. H. Clark
City Engineer
Portland, Maine.

Dear Sir:-

Referring to your application in the name of F. E. Pearson for a building permit to erect a public garage at 5539 Forest Avenue.

It is unlawful to commence any work upon a building within the city until a building permit has actually been secured, but it appears that you have seen fit to start the construction on this particular job although the building permit has never been issued.

A careful examination of the plans show that they are very incomplete. It will be necessary to show on the plans the following information:

Show thickness and width of brick bearing pier in the side wall under the wooden cross beams.

Show details of wall around boiler room with thickness, height etc; also material and construction of floor of the garage over the boiler room and of reinforced concrete show details of reinforcement.

Show a section across the building indicating detail at the cornice and the method of fastening the wooden beams across the building to the whole together, also method of anchoring wooden cross beams to the brick wall.

Show the size of the wooden wall beams on both ends of the building.

Show details showing the four inch lally columns, concrete frame of window in Eric.

Indicate material and construction of each side partition around main side fire door at the bottom.

Show details of footings under Lally columns.

Is there to be a concrete floor in the garage. If so, indicate the same.

What kind of lintels are to be used over the small window openings in the side wall.

Is the roof drainage to be carried to the sewer. If so, indicate the same.

It will be necessary to withhold the building permit until all of this information is shown on the plans satisfactorily.

Yours truly,

Copy to:
Chief Engineer

Inspector of Buildings.

Location, Ownership and detail must be correct, complete and legible.
 Separate application required for every building.
 Plans must be filed with this application.
